

S2-Compatible 6-Input 2-Output Audio/Video Switch

Description

The CXA2079Q is a 6-input, 2-output audio/video switch featuring I²C bus compatibility for TVs. This IC has input pins that are compatible with S2 protocol.

Features

- 4 inputs that are compatible with S2 protocol
- Serial control with I²C bus
- 6 inputs, 2 outputs
- The desired inputs can be selected independently for each of the 2 outputs
- Wide band video amplifier (20MHz, -3dB)
- Y/C MIX circuit
- Slave address can be changed (90H/92H)
- Audio muting from external pin
- High impedance maintained by I²C bus lines (SDA, SCL) even when power is OFF
- Wide audio dynamic range (3Vrms typ.)

Applications

Audio/video switch featuring I²C bus compatibility for TVs

Structure

Bipolar silicon monolithic IC

64 pin QFP (Plastic)

Absolute Maximum Ratings

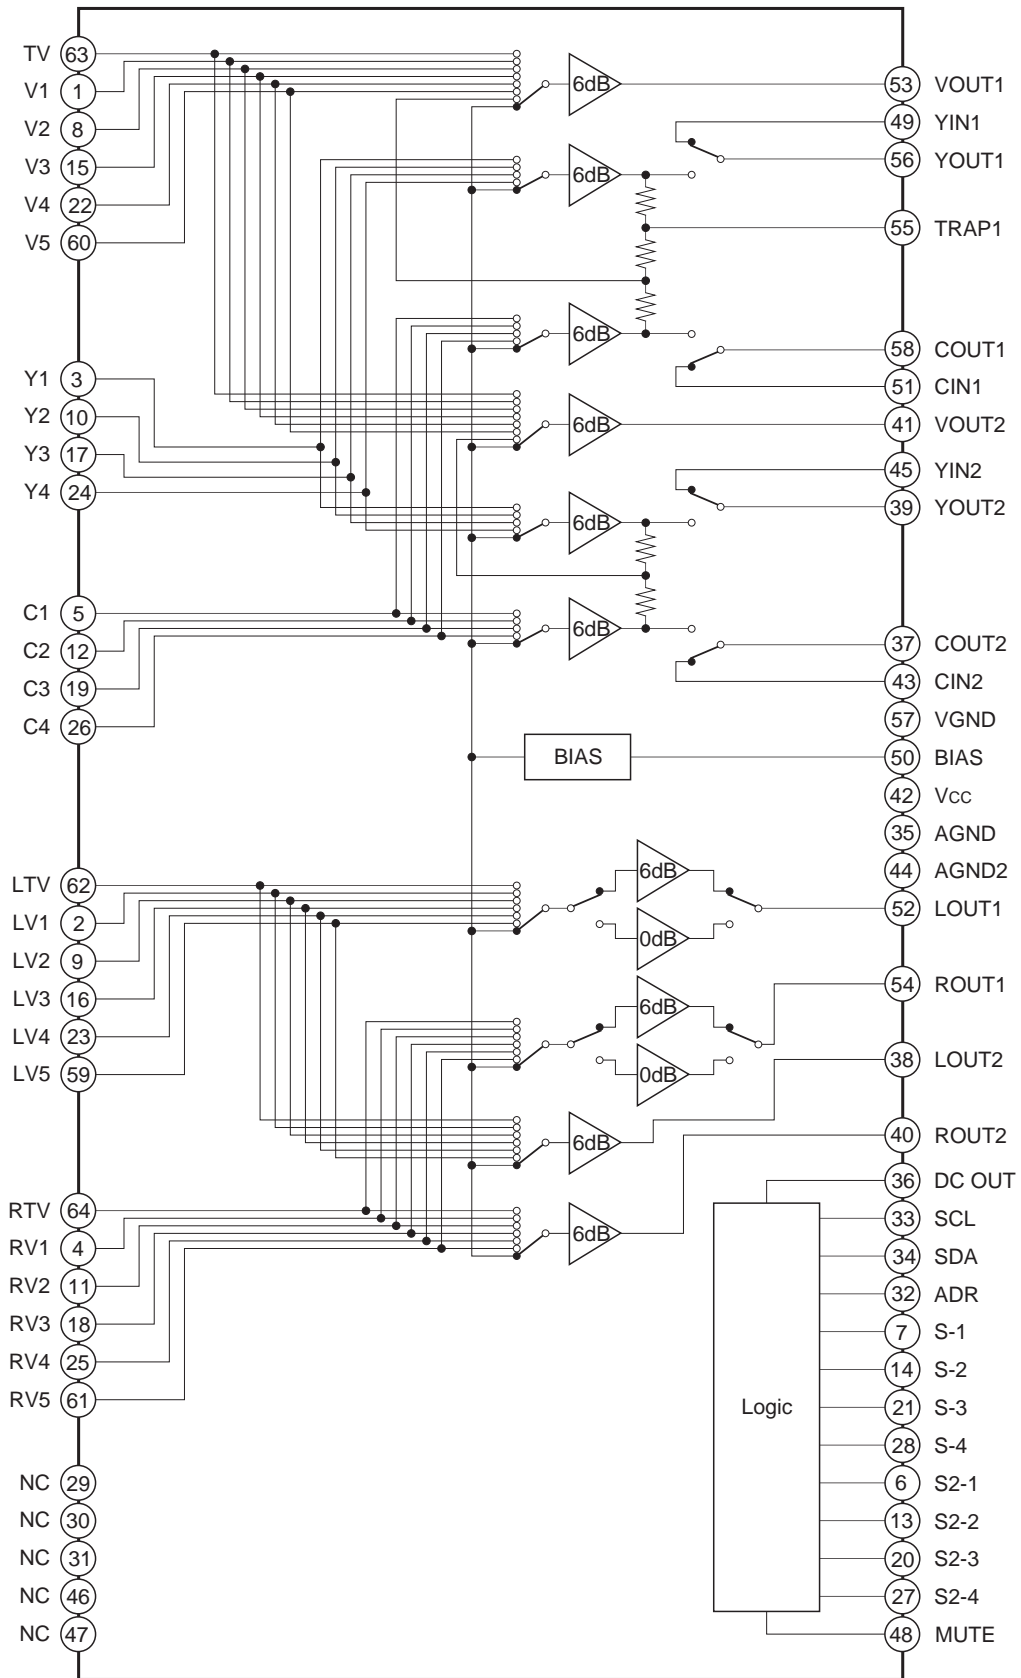

• Supply voltage	V _{CC}	12	V
• Operating temperature	T _{opr}	-20 to +75	°C
• Storage temperature	T _{stg}	-65 to +150	°C
• Allowable power dissipation	P _D	1300	mW

Operating Conditions

Supply voltage		9 ± 0.5	V
----------------	--	---------	---

Application circuits shown, if any, are typical examples illustrating the operation of the devices. Sony cannot assume responsibility for any problems arising out of the use of these circuits.

Block Diagram

Audio system is attenuated by 6dB for 6kΩ resistor input, and a total gain is 0dB (LOUT1 and ROUT1 can be changed to -6dB).

Pin Configuration

Pin Description

Pin No.	Symbol	Pin voltage	Equivalent circuit	Description
63 1 8 15 22 60	TV V1 V2 V3 V4 V5	4.0V		Video signal inputs. Input composite video signals.
3 10 17 24 49 45	Y1 Y2 Y3 Y4 YIN1 YIN2	4.0V		Y/C separation signal inputs. Input luminance signals. The YIN1 pin inputs the signal obtained by Y/C separating the VOUT1 pin output. The YIN2 pin inputs the signal obtained by Y/C separating the VOUT2 pin output.
5 12 19 26 51 43	C1 C2 C3 C4 CIN1 CIN2	4.5V		Y/C separation signal inputs. Input chrominance signals. The CIN1 pin inputs the signal obtained by Y/C separating the VOUT1 pin output. The CIN2 pin inputs the signal obtained by Y/C separating the VOUT2 pin output.
62 2 9 16 23 59 64 4 11 18 25 61	LTV LV1 LV2 LV3 LV4 LV5 RTV RV1 RV2 RV3 RV4 RV5	4.5V		Audio signal inputs.
53 41	VOUT1 VOUT2	3.9V		Video signal outputs. Output composite video signals.

Pin No.	Symbol	Pin voltage	Equivalent circuit	Description
56 39	YOUT1 YOUT2	3.3V		Video signal outputs. Output luminance signals.
58 37	COUT1 COUT2	4.5V		Video signal outputs. Output chrominance signals.
52 38 54 40	LOUT1 LOUT2 ROUT1 ROUT2	4.5V		Audio signal outputs. $Z_o = 50\Omega$ (within $DC \pm 2mA$)
6 13 20 27	S2-1 S2-2 S2-3 S2-4	—		Detects the S2-compatible DC superimposed onto the C signal. 4:3 video signal at 1.3V or less 4:3 letter-box signal at 1.3V or more to 2.5V or less 16:9 picture squeezed signal at 2.5V or more These pins are pulled down to GND by a 100kΩ resistor, so the 4:3 video signals are selected when open.
7 14 21 28	S-1 S-2 S-3 S-4	—		Composite video/S selector. The detection results are written to the status register. S signal at 3.5V or less Composite video signal at 3.5V or more These pins are pulled up to 5V by a 100kΩ resistor, so the composite video signals are selected when open.
32	ADR	—		Selects the slave address for the I ² C bus. 90H at 1.5V or less 92H at 2.5V or more 90H when open

Pin No.	Symbol	Pin voltage	Equivalent circuit	Description										
33	SCL	—		<p>I²C bus signal input $V_{ILmax} = 1.5V$ $V_{IHmin} = 3.0V$</p>										
34	SDA	—		<p>I²C bus signal input $V_{ILmax} = 1.5V$ $V_{IHmin} = 3.0V$ $V_{OLmax} = 0.4V$</p>										
36	DC OUT	—		<p>Outputs the S2-compatible DC superimposed onto the COUT2 output. The DC is superimposed by connecting this pin to the COUT2 output via a capacitor. Control is performed by the I²C bus. When 0V is output, Q1 is ON and the impedance is 5kΩ. S2 protocol output DC impedance of $10 \pm 3k\Omega$ is realized by attaching external resistance of 4.7kΩ.</p> <table border="1"> <thead> <tr> <th>DC OUT (bus)</th> <th>Output DC</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>4.5V</td> </tr> <tr> <td>1</td> <td>0V</td> </tr> <tr> <td>2</td> <td>1.9V</td> </tr> <tr> <td>3</td> <td>4.5V</td> </tr> </tbody> </table>	DC OUT (bus)	Output DC	0	4.5V	1	0V	2	1.9V	3	4.5V

Rise time	t_R		—	—	1	μs
Fall time	t_F		—	—	300	ns
Minimum waiting time for stop preparation	$t_{SU;STO}$		4.7	—	—	μs

Signal is input from one of the following pins: 2, 4, 9, 11, 16, 18, 23, 25, 59, 61, 62 and 64.
 Output signal is measured from one of the following pins: 38, 40, 52 and 54.

Fig. 2. Audio system (gain, frequency response characteristics, total harmonic distortion, input dynamic range, cross talk) measurement circuit

A $f=100\text{Hz}$, 0.3Vp-p signal is applied to Vcc and the output signals from Pins 38, 40, 52 and 54 are measured.

I²C BUS Control Signal

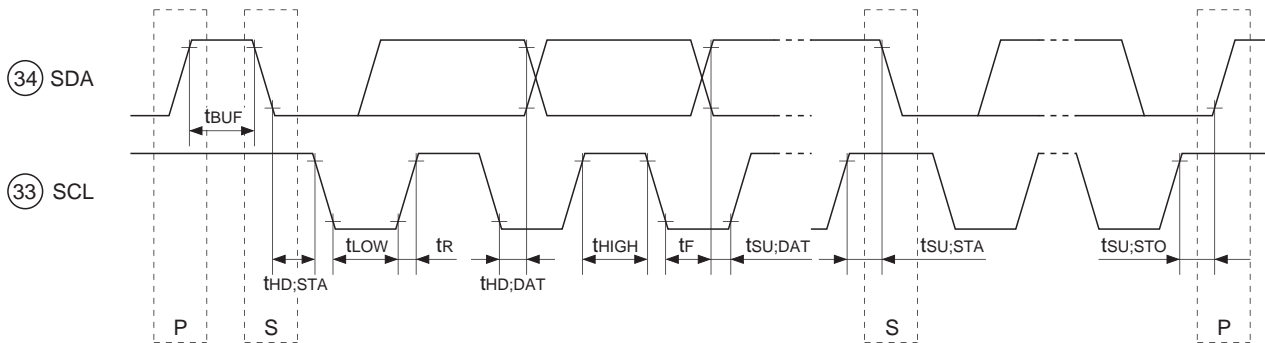

Fig. 6. I²C BUS Control Signal Timing Chart

Description of Operation

The CXA2079Q is a TV I²C bus-compatible AV switch IC. The video system and the stereo audio system both have 6 inputs and 2 outputs each. 4 of the 6 video system inputs support S2 and S protocols.

The desired inputs can be independently assigned to each output (in the audio system, the left and right channels are processed as one unit) by I²C bus control. However, the same input is assigned to both the video and audio system output 2.

I²C BUS Registers

1) I²C BUS

The I²C bus (inter-IC bus) is an inter-IC bus system developed by Philips. Two lines (SDA – serial data, SCL – serial clock) provide control over start, stop, data transfer, synchronization, and collision avoidance. The IC outputs are either open collector or open drain, forming a bus line in the wired OR format.

S: Start condition; SDA is set "Low" when SCL is "High"
 P: Stop condition; SDA is set "High" when SCL is "High"
 A: Acknowledge; signal sent from the slave

Data is transmitted by MSB-first. One data unit consists of 8 bits, to which the acknowledge signal, which indicates that the data has been accepted by the slave, is attached at the end. Normally, the slave*¹ IC receives data at the rising edge of SCL and the master*² IC changes data at the falling edge of SCL.

*¹ Slave: An IC that is placed under the control of the master. In a normal system, all devices excluding the central microcomputer are slaves.

*² Master: A central microcomputer or other controlling IC.

2) Control Registers

The CXA2079Q control is exercised by writing 2-byte data into the two 8-bit control registers which control the output selector circuits for the 2 outputs.

S	Slave address	A	DATA1	A	DATA2	A	P
---	---------------	---	-------	---	-------	---	---

- S: Start condition
- A: Acknowledge
- P: Stop condition

Control register structure (DATA1 and DATA2)

- All registers are set to "0" during IC power on.
- "*" indicates undefined.

	b7	b6	b5	b4	b3	b2	b1	b0
Slave add.	1	0	0	1	0	0	ADR	R/W
DATA1	A-GAIN	S/COMP1	V-IN1			A-IN1		
DATA2	*	S/COMP2	AV-IN2			DC OUT		*

R/W (1): Read/write mode

- 0: Control data write
- 1: Status register read

ADR (1): This bit sets the slave address set by the address pin.

- 0: 90H
- 1: 92H

A-GAIN (1): LOUT1/ROUT1 output gain selector

- 0: 0dB output
- 1: -6dB output

S/COMP1 and S/COMP2 (1 each): S terminal input/composite signal input selectors

By setting these bits to "0", when composite signal input is selected, YOUT/COOUT output the inputs from YIN/CIN during video 1/2 output.

- 0: Composite signal inputs (TV, V1 to V5 inputs)
- 1: S terminal inputs (Y1/C1 to Y4/C4 inputs)

V-IN1 (3 each): This bit selects the input signals output to each video output.

- 0: Mute
- 1: Selects the TV input
- 2: Selects the V1 and Y1/C1 inputs
- 3: Selects the V2 and Y2/C2 inputs
- 4: Selects the V3 and Y3/C3 inputs
- 5: Selects the V4 and Y4/C4 inputs
- 6: Selects the V5 input
- 7: Mute

A-IN1 (3 each): This bit selects the input signals output to each audio output.

- 0: Mute
- 1: Selects the LTV/RTV inputs
- 2: Selects the LV1/RV1 inputs
- 3: Selects the LV2/RV2 inputs
- 4: Selects the LV3/RV3 inputs
- 5: Selects the LV4/RV4 inputs
- 6: Selects the LV5/RV5 inputs
- 7: Mute

AV-IN2 (3): This bit selects the input signals output to output 2 (VOUT2, YOUT2/COUT2, LOUT2/ROUT2).

Note) Both the video output and the audio output are selected at the same time only for AV-IN2.

- 0: Mute
- 1: Selects the TV and LTV/RTV inputs
- 2: Selects the V1, Y1/C1 and LV1/RV1 inputs
- 3: Selects the V2, Y2/C2 and LV2/RV2 inputs
- 4: Selects the V3, Y3/C3 and LV3/RV3 inputs
- 5: Selects the V4, Y4/C4 and LV4/RV4 inputs
- 6: Selects the V5 and LV5/RV5 inputs
- 7: Mute

DC OUT (2): This bit sets the DC voltage output from Pin 36 (DC OUT).

- 0: 4.5V
- 1: 0V
- 2: 1.9V
- 3: 4.5V

3) Status Registers

- When reading two bytes

S	Slave address	A	DATA1	A	DATA2	NA	P
---	---------------	---	-------	---	-------	----	---

- When reading one byte

S	Slave address	A	DATA1	NA	P
---	---------------	---	-------	----	---

- S: Start condition
- A: Acknowledge
- NA: No acknowledge
- P: Stop condition

When communication is to be terminated in the status register reading mode, the no-acknowledge signal is needed to assure that the master does not issue the acknowledge signal to the slave.

It is possible to read only DATA1 of the status register by sending the no-acknowledge signal after DATA1.

Status register structure (DATA1 and DATA2)

	b7	b6	b5	b4	b3	b2	b1	b0
Slave add.	1	0	0	1	0	0	ADR	1
DATA1	S1SEL	S2SEL	S3SEL	S4SEL	S-C1		S-C2	
DATA2	$\overline{\text{S1SEL}}$	$\overline{\text{S2SEL}}$	$\overline{\text{S3SEL}}$	$\overline{\text{S4SEL}}$	S-C3		S-C4	

S1SEL to S4SEL (1 each): S-1 to S-4 pin status

0: S-1 to S-4 pins are not grounded.

1: S-1 to S-4 pins are grounded.

S1SEL to S4SEL are actually determined by comparing the S-1 to S-4 pin DC voltages with 3.5V.

S-1 to S-4 pin DC voltage	S1SEL to S4SEL
3.5V or more	0
3.5V or less	1

S-C1, S-C2, S-C3, S-C4 (2 each): S2-1, S2-2, S2-3 and S2-4 pin status

0: 4:3 video signal

1: 4:3 letter-box signal

2: 16:9 video squeezed signal

3: No signal

S-C1 to S-C4 are actually determined by comparing the S2-1 to S2-4 pin DC voltages with two threshold. However, when the S-1 to S-4 pins are open, the outputs are fixed to "3".

S2-1 to S2-4 pin DC voltage	S-C1 to S-C4
1.3V or less	0
1.3V or more to 2.5V or less	1
2.5V or more	2
S-1 to S-4 OPEN	3

4) Power-on Reset

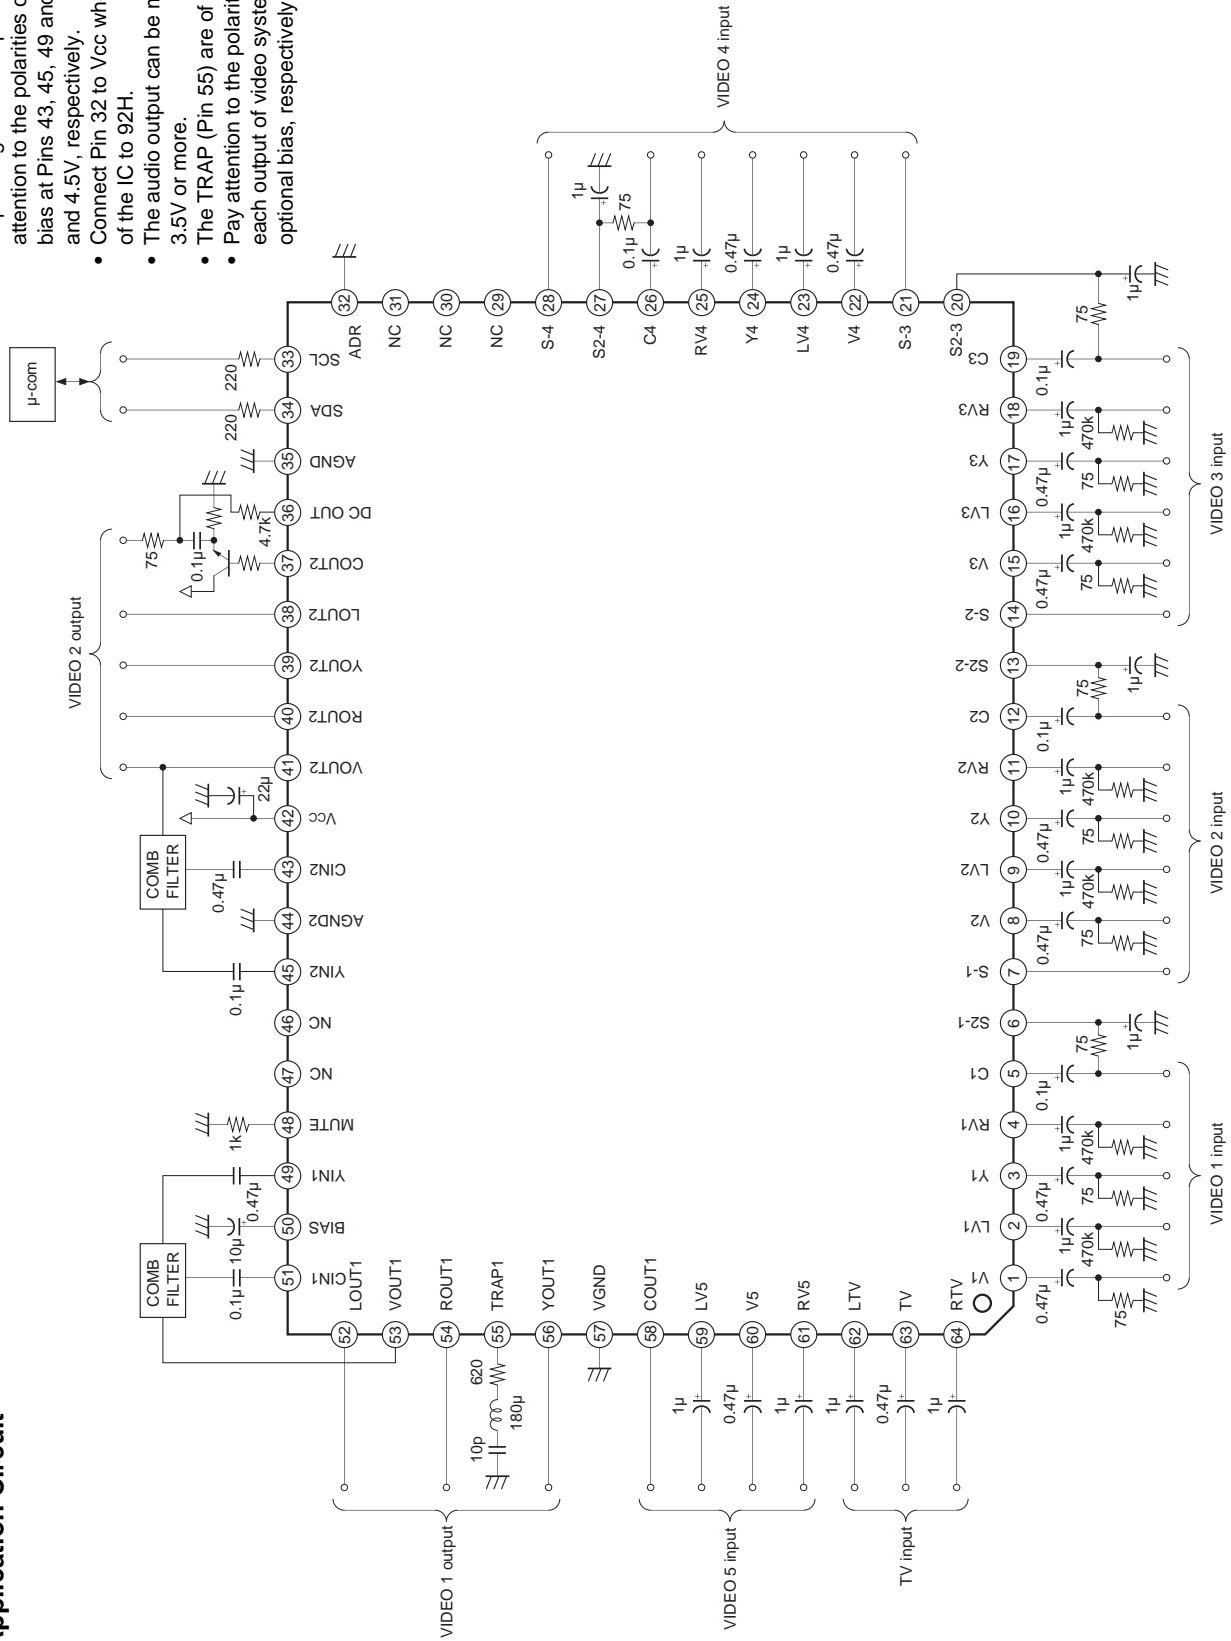

The CXA2079Q has an internal power-on reset function that sets each control register to "0" during IC power ON.

The power-on reset V_{TH} has hysteresis.

Application Circuit

- Depending on the output bias of the comb filters, pay attention to the polarities of the capacitors since the bias at Pins 43, 45, 49 and 51 is approximately 3.1V and 4.5V, respectively.
- Connect Pin 32 to Vcc when setting the slave address of the IC to 92H.
- The audio output can be muted by setting Pin 48 to 3.5V or more.
- The TRAP (Pin 55) are of 3.58MHz subcarrier.
- Pay attention to the polarities of the capacitors since each output of video system and audio system has optional bias, respectively.

Application circuits shown are typical examples illustrating the operation of the devices. Sony cannot assume responsibility for any problems arising out of the use of these circuits or for any infringement of third party patent and other right due to same.
