

9V/2.3W single-channel power amplifier

BA534

The BA534 is a monolithic power amplifier designed for portable cassette players and radios. With a 9V power supply, it has a rated output of 2.3W into a 4Ω load (THD = 10%). It has high ripple rejection, and the "pop" noise when power is applied has been suppressed to an absolute minimum.

● Applications

Portable cassette recorders and radios.

● Features

- 1) High power output.

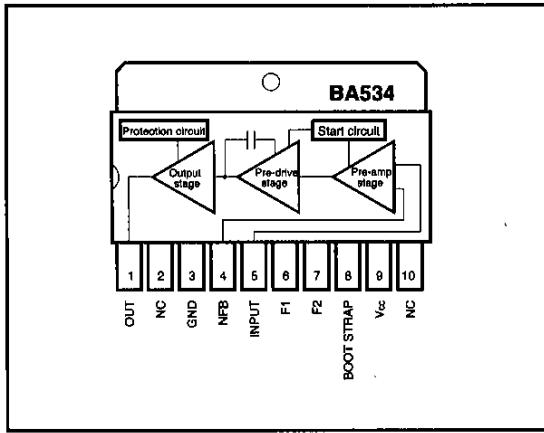

When $V_{cc} = 9V$, $R_L = 4\Omega$ and THD = 10% : $P_{out} = 2.3W$

When $V_{cc} = 9V$, $R_L = 3\Omega$ and THD = 10% : $P_{out} = 2.8W$

- 2) The "pop" noise that occurs when the power is applied is extremely low.

- 3) Excellent ripple rejection ratio.
