

INTRODUCTION

The KA2213 is a monolithic integrated circuit consisting of a preamplifier, ALC circuit, and power amplifier in a 14-pin plastic dual-in-line package with heat sink.

FEATURES

- Suitable for playing and recording functions of mono cassette tape recorders
- Wide operating supply voltage range: $V_{CC} = 4V \sim 12V$
- High gain pre-amplifier and power amplifier
- Output power of power amplifier state
 $P_O = 1W$ at $V_{CC} = 6V$, $R_L = 4\Omega$, THD = 10%
- Soft tone quality at the time of output saturation
- Wide ALC range and small variation in output voltage
- Reduced shock noise at the time of power on/off due to built-in prevention circuit
- Variable monitor capability due to recording amplifier consisting of pre-amplifier alone
- Minimum number of external parts required

ORDERING INFORMATION

| Device | Package | Operating Temperature |
