CMOS LSI

LC75392, 75392M

Single-Chip Electronic Volume Control System

Overview

The LC75392 (DIP-30SD) and the LC75392M (MFP-30S) are electronic volume control ICs that provide input and output switching, volume, and tone control functions controlled by data transferred over a serial interface.

Functions

• Input and output switching: Four inputs and outputs can be switched independently.

• Volume control: A balance function can be implemented by controlling the left and right levels independently.
Each channel can be set to 0 to –20 dB in 2 dB steps, –20 to –32 dB in 3 dB steps, –32 to –52 dB in 4 dB steps, –52 dB to –70 dB in 4.5 dB steps, and –∞.

•Tone controls: Internal switches are provided to select between four sets of frequency characteristics. A buffer function can be implemented using external components.
Features

Serial data interface: Support for control and communication in the CCB format.
Package Dimensions

unit: mm

3196-DIP30SD

Specifications

Absolute Maximum Ratings at Ta = 25°C, V_{SS} = 0 V

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V_{DD} max	V_{DD}	12	V
Maximum input voltage	V_{IN} max	CL, DI, CE, L1, L2, L3, L4, R1, R2, R3, R4	V_{SS} – 0.3 to V_{DD} + 0.3	V
Allowable power dissipation	Pd max	Ta ≤ 85°C	160	mW
Operating temperature	Topr		–40 to +85	°C
Storage temperature	Tstg		–50 to +125	°C

## Allowable Operating Ranges at Ta = 25°C, V_{SS} = 0 V

Parameter	Symbol	Conditions	Ratings min	Ratings typ	Ratings max	Unit
Supply voltage	V_{DD}	V_{DD}	5.5		11.0	V
Input high-level voltage	V_{IH}	CL, DI, CE	4.0		V_{DD}	V
Input low-level voltage	V_{IL}	CL, DI, CE	V_{SS}		1.0	V
Input voltage amplitude	V_{IN}	L1, L2, L3, L4, R1, R2, R3, R4	V_{SS}		V_{DD}	Vp-p
Input pulse width	$t_{øW}$	CL	1.0			µs
Setup time	t_{setup}	CL, DI, CE	1.0			µs
Hold time	t_{hold}	CL, DI, CE	1.0			µs
Operating frequency	fopg	CL			500	kHz

Electrical Characteristics at Ta = 25°C, V_{DD} = 10 V, V_{SS} = 0 V

Parameter	Symbol	Conditions	Ratings min	Ratings typ	Ratings max	Unit
[Input Block]						
Input resistance	Rin	L1, L2, L3, L4, R1, R2, R3, R4		500		kΩ
[Overall]						
Total harmonic distortion	THD1	V_{IN} = 100 mV rms, f = 1 kHz, overall, buffer mode off, flat state		0.013		%
	THD2	V_{IN} = 100 mV rms, f = 20 kHz, overall, buffer mode off, flat state		0.013		%
Crosstalk	CT	V_{IN} = 1 V rms, f = 1 kHz, overall, Rg = 1 kΩ, buffer mode off, flat state		81		dB
Output at maximum attenuation	V_O min	V_{IN} = 1 V rms, f = 1 kHz, main volume set to −∞, buffer mode on		−80		dB
Output noise voltage	V_N1	Flat overall (IHF-A), Rg = 1 kΩ, buffer mode off, flat state		15		µV
	V_N2	Flat overall (DIN-AUDIO), Rg = 1 kΩ, buffer mode off, flat state		22		µV
Current drain	I_{DD}	V_{DD} − V_{SS} = 11 V		7	10	mA
Input high-level current	I_{IH}	CL, DI, CE, V_{IN} = 10 V			10	µA
Input low-level current	I_{IL}	CL, DI, CE, V_{IN} = 0 V	−10			µA

Control System Timing and Data Format

To control the LC75392, applications must apply data in the stipulated format to the CE, CL, and DI pins. This data consists of 32 bits, of which 8 bits are the address and 24 bits are the control data.

Usage Notes
- The states of the internal analog switches are undefined immediately after power is first applied. Applications should apply muting to the outputs of this IC using external circuits until the control data has been set up.
- The CL, DI, and CE pin lines should be shielded by the ground pattern or shielded lines should be used to prevent the high-frequency digital signals that are transmitted over these lines from entering the analog system as noise.
- We recommend that applications use a sequence of several smaller steps to approach the final setting when changing the value of the volume control setting significantly. For example, the sequence shown below should be used when changing from 0 dB to $-\infty$. This can reduce switching noise.

Example: 0 dB $\to$ –10 dB $\to$ –20 dB $\to$ –40 dB $\to$ –70 dB $\to -\infty$
