**LC863516C**

CMOS IC  
 48K/40K/32K/28K/24K/20K/16K-byte ROM,  
 CGROM16K-byte  
 on-chip 640/512-byte RAM and 176×9-bit OSD RAM  
**8-bit 1-chip Microcontroller**

### Overview

The LC863548C/40C/32C/28C/24C/20C/16C are 8-bit single chip microcontrollers with the following on-chip functional blocks :

- CPU : Operable at a minimum bus cycle time of 0.424μs
  - On-chip ROM capacity
    - Program ROM : 48K/40K/32K/28K/24K/20K/16K-bytes
    - CGROM : 16K-bytes
  - On-chip RAM capacity : 640/512-bytes
  - OSD RAM : 176 × 9-bits
  - On-screen display controller
  - Four channels × 6-bit AD Converter
  - Three channels × 7-bit PWM
  - Two channels × 16-bit timer/counter, 14-bit base timer
  - IIC-bus compliant serial interface circuit (Multi-master type)
  - ROM correction function
  - 13-source 8-vectored interrupt system
  - Integrated system clock generator and display clock generator
    - Only one X'tal oscillator (32.768kHz) for PLL reference is used for both generators.
- All of the above functions are fabricated on a single chip.

Note : This product includes the IIC bus interface circuit. If you intend to use the IIC bus interface, please notify us of this in advance of our receiving your program ROM code order.

Purchase of SANYO IIC components conveys a license under the Philips IIC Patents Rights to use these components in an IIC system, provided that the system conforms to the IIC Standard Specification as defined by Philips.

#### Trademarks

IIC is a trademark of Philips Corporation.

- Any and all SANYO Semiconductor products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO Semiconductor representative nearest you before using any SANYO Semiconductor products described or contained herein in such applications.
- SANYO Semiconductor assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor products described or contained herein.

# LC863548C/40C/32C/28C/24C/20C/16C

## Features

- Read-Only Memory (ROM)** : 49152 × 8-bits/40960 × 8-bits/32768 × 8-bits/  
 28672 × 8-bits/24576 × 8-bits/20480 × 8-bits/  
 16384 × 8-bits for program  
 16128 × 8-bits for CGROM
  
  - Random Access Memory (RAM)** : 512 × 8-bits (working area) : LC863548C/40C  
 384 × 8-bits (working area) : LC863532C/28C/24C/20C/16C  
 128 × 8-bits (working or ROM correction function)  
 176 × 9-bits (for CRT display)
  
  - OSD functions**
    - Screen display : 36 characters × 8 lines (by software)
    - RAM : 176 words (9-bits per word)  
 Display area : 36 words × 4 lines  
 Control area : 8 words × 4 lines
    - Characters  
 Up to 252 kinds of 16 × 32 dot character fonts (4 characters including 1 test character are not programmable)  
 Each font can be divided into two parts and used as two fonts (Ex. 16 × 16 dot character font × 2)
    - Various character attributes
      - Character colors : 16 colors (analog mode : 1 Vp-p output) /8 colors (digital mode)
      - Character background colors : 16 colors (analog mode : 1 Vp-p output) /8 colors (digital mode)
      - Fringe/shadow colors : 16 colors (analog mode : 1 Vp-p output) /8 colors (digital mode)
      - Full screen colors : 16 colors (analog mode : 1 Vp-p output) /8 colors (digital mode)
      - Rounding
      - Underline
      - Italic character (slanting)
    - Attribute can be changed without spacing
    - Vertical display start line number can be set for each row independently (Rows can be overlapped)
    - Horizontal display start position can be set for each row independently
    - Horizontal pitch (9 to 16 dots) <sup>\*1</sup> and vertical pitch (1 to 32 dots) can be set for each row independently
    - Different display modes can be set for each row independently  
 Caption • Text mode/OSD mode 1/OSD mode 2 (Quarter size) /Simplified graphic mode
    - Ten character sizes <sup>\*1</sup>  
 Horez. × Vert. = (1 × 1), (1 × 2), (2 × 2), (2 × 4), (0.5 × 0.5)  
 (1.5 × 1), (1.5 × 2), (3 × 2), (3 × 4), (0.75 × 0.5)
    - Shuttering and scrolling on each row
    - Simplified Graphic Display
- \*1 Note : range depends on display mode : refer to the manual for details.

## ■Bus Cycle Time/Instruction-Cycle Time

Bus cycle time	Instruction cycle time	Clock divider	System clock oscillation	Oscillation frequency	Voltage
0.424μs	0.848μs	1/2	Internal VCO (Ref : X'tal 32.768kHz)	14.156MHz	4.5V to 5.5V
7.5μs	15.0μs	1/2	Internal RC	800kHz	4.5V to 5.5V
91.55μs	183.1μs	1/1	Crystal	32.768kHz	4.5V to 5.5V
183.1μs	366.2μs	1/2	Crystal	32.768kHz	4.5V to 5.5V

## ■Ports

- Input/Output Ports : 4 ports (24 terminals)  
 Data direction programmable in nibble units : 1 port (8 terminals)  
 (If the N-ch open drain output is selected by option, the corresponding port data can be read in output mode.)  
 Data direction programmable for each bit individually : 3 ports (16 terminals)

## ■AD converter

- 4-channels × 6-bit AD converters

## ■Serial interfaces

- IIC-bus compliant serial interface (Multi-master type)  
Consists of a single built-in circuit with two I/O channels. The two data lines and two clock lines can be connected internally.

## ■PWM output

- 3-channels × 7-bit PWM

## ■Timer

- Timer 0 : 16-bit timer/counter  
With 2-bit prescaler + 8-bit programmable prescaler  
Mode 0 : Two 8-bit timers with a programmable prescaler  
Mode 1 : 8-bit timer with a programmable prescaler + 8-bit counter  
Mode 2 : 16-bit timer with a programmable prescaler  
Mode 3 : 16-bit counter  
The resolution of timer is 1 tCYC.
- Timer 1 : 16-bit timer/ PWM  
Mode 0 : Two 8-bit timers  
Mode 1 : 8-bit timer + 8-bit PWM  
Mode 2 : 16-bit timer  
Mode 3 : A variable-bit PWM (9 to 16 bits)  
In mode 0/1, the resolution of timer/PWM is 1 tCYC  
In mode 2/3, the resolution of timer/PWM is selectable by program ; tCYC or 1/2 tCYC
- Base timer  
Generate every 500ms overflow for a clock application  
(using 32.768kHz crystal oscillation for the base timer clock)  
Generate every 976μs, 3.9ms, 15.6ms, 62.5ms overflow  
(using 32.768kHz crystal oscillation for the base timer clock)  
Clock for the base timer is selectable from 32.768kHz crystal oscillation, system clock or programmable prescaler output of Timer 0

## ■Remote control receiver circuit (connected to the P73/INT3/T0IN terminal)

- Noise rejection function
- Polarity switching

## ■Watchdog timer

External RC circuit is required  
Interrupt or system reset is activated when the timer overflows

## ■ROM correction function

Max 128-bytes/2 addresses

## ■Interrupts

- 13 sources 8 vectored interrupts
  1. External Interrupt INT0
  2. External Interrupt INT1
  3. External Interrupt INT2, Timer/counter T0L (Lower 8-bits)
  4. External Interrupt INT3, base timer
  5. Timer/counter T0H (Upper 8-bits)
  6. Timer T1H, Timer T1L
  7. Vertical synchronous signal interrupt ( $\overline{VS}$ ), horizontal line ( $\overline{HS}$ )
  8. IIC, Software
- Interrupt priority control  
Three interrupt priorities are supported (low, high and highest) and multi-level nesting is possible.  
Low or high priority can be assigned to the interrupts from 3 to 8 listed above.  
For the external interrupt INT0 and INT1, low or highest priority can be set.

### ■Sub-routine stack level

- A maximum of 128 levels (stack is built in the internal RAM)

### ■Multiplication/division instruction

- 16-bits  $\times$  8-bits (7 instruction cycle times)
- 16-bits  $\div$  8-bits (7 instruction cycle times)

### ■3 oscillation circuits

- Built-in RC oscillation circuit used for the system clock
- Built-in VCO circuit used for the system clock and OSD
- X'tal oscillation circuit used for base timer, system clock and PLL reference

### ■Standby function

- HALT mode

The HALT mode is used to reduce the power dissipation. In this operation mode, the program execution is stopped.

This mode can be released by the interrupt request or the system reset.

- HOLD mode

The HOLD mode is used to stop the oscillations ; RC (internal), VCO, and X'tal oscillations.

This mode can be released by the following conditions.

1. Pull the reset terminal (RES) to low level.
2. Feed the selected level to either P70/INT0 or P71/INT1.

### ■Package

- MFP36SDJ (Lead-free type)
- DIP36S (Lead-free type)

### ■Development tools

- Flash EEPROM : LC86F3548A
- Evaluation chip : LC863096
- Emulator : EVA86000 (main) + ECB863200A (evaluation chip board)  
+ SUB863400A (sub board)  
+ POD36-CABLE (cable)  
+ POD36-DIP (for DIP36S)  
or POD36-MFP (for MFP36SDJ)

## LC863548C/40C/32C/28C/24C/20C/16C

Continued from preceding page.

- Output form and existence of pull-up resistor for all ports can be specified for each bit.
- Programmable pull-up resistor is always connected regardless of port option, CMOS or N-ch open drain output in port 1.

• Port status in reset

Terminal	I/O	Pull-up resistor status at selecting CMOS output option
Port 0	I	Pull-up resistor OFF, ON after reset release
Port 1	I	Programmable pull-up resistor OFF

### Absolute Maximum Ratings / Ta = 25°C, VSS = 0V

Parameter	Symbol	Pins	Conditions	Limits				unit
				VDD[V]	min	typ	max	
Maximum supply voltage	VDD max	VDD			-0.3		+6.5	V

### Analog Mode RGB Characteristics / $T_a = -10^{\circ}\text{C}$ to $+70^{\circ}\text{C}$ , $V_{SS} = 0\text{V}$

Parameter	Symbol	Pins	Conditions	Limits				
				$V_{DD}$ [V]	min	typ	max	unit
Analog output voltage		R. G. B Analog output mode	Low level output	5.0	0.45	0.5	0.55	V
			Intensity output		0.90	1.0	1.10	
			Hi level output		1.35	1.5	1.65	
Time setting		R. G. B	70% 10pf load				50	ns

### Sample Current Dissipation Characteristics / $T_a = -10^{\circ}\text{C}$ to $+70^{\circ}\text{C}$ , $V_{SS} = 0\text{V}$

The sample current dissipation characteristics are the measurement result of SANYO provided evaluation board when the recommended circuit parameters shown in the sample oscillation circuit characteristics are used externally.

The currents through the output transistors and the pull-up MOS transistors are ignored.

Parameter	Symbol	Pins	Conditions	Limits				
				$V_{DD}$ [V]	min	typ	max	unit
Current dissipation during basic operation (Note 3)	IDDOP(1)	$V_{DD}$	<ul style="list-style-type: none"> <li>FmX'tal = 32.768kHz</li> <li>X'tal oscillation</li> <li>System clock : VCO</li> <li>VCO for OSD operating</li> <li>OSD is Digital mode</li> <li>Internal RC oscillation stops</li> </ul>	4.5 to 5.5		9	22	mA
	IDDOP(2)	$V_{DD}$	<ul style="list-style-type: none"> <li>FmX'tal = 32.768kHz</li> <li>X'tal oscillation</li> <li>System clock : VCO</li> <li>VCO for OSD operating</li> <li>OSD is Analog mode</li> <li>Internal RC oscillation stops</li> </ul>	4.5 to 5.5		18	32	
	IDDOP(3)	$V_{DD}$	<ul style="list-style-type: none"> <li>FmX'tal = 32.768kHz</li> <li>X'tal oscillation</li> <li>System clock : X'tal (Instruction cycle time : 366.2μs)</li> <li>VCO for system VCO for OSD, internal RC oscillation stop</li> <li>Data slicer, AD converters stop</li> </ul>	4.5 to 5.5		65	300	μA
Current dissipation in HALT mode (Note 3)	IDDHALT(1)	$V_{DD}$	<ul style="list-style-type: none"> <li>HALT mode</li> <li>FmX'tal = 32.768kHz</li> <li>X'tal oscillation</li> <li>System clock : VCO</li> <li>VCO for OSD stops</li> <li>Internal RC oscillation stops</li> </ul>	4.5 to 5.5		3	9	mA
	IDDHALT(2)	$V_{DD}$	<ul style="list-style-type: none"> <li>HALT mode</li> <li>FmX'tal = 32.768kHz</li> <li>X'tal oscillation</li> <li>VCO for system stops</li> <li>VCO for OSD stops</li> <li>System clock : Internal RC</li> </ul>	4.5 to 5.5		300	1000	
	IDDHALT(3)	$V_{DD}$	<ul style="list-style-type: none"> <li>HALT mode</li> <li>FmX'tal = 32.768kHz</li> <li>X'tal oscillation</li> <li>VCO for system stops</li> <li>VCO for OSD stops</li> <li>System clock : X'tal (Instruction cycle time : 366.2μs)</li> </ul>	4.5 to 5.5		57	200	μA
Current dissipation in HOLD mode (Note 3)	IDDHOLD	$V_{DD}$	<ul style="list-style-type: none"> <li>HOLD mode</li> <li>All oscillation stops.</li> </ul>	4.5 to 5.5		0.05	20	μA

Note 3 : The currents through the output transistors and the pull-up MOS transistors are ignored.

### Recommended Oscillation Circuit and Sample Characteristics

The sample oscillation circuit characteristics in the table below is based on the following conditions :

- Recommended circuit parameters are verified by an oscillator manufacturer using a SANYO provided oscillation evaluation board.
- Sample characteristics are the result of the evaluation with the recommended circuit parameters connected externally.

Recommended oscillation circuit and sample characteristics (Ta = -10 to +70°C)

Frequency	Manufacturer	Oscillator	Recommended circuit parameters				Operating supply voltage range	Oscillation stabilizing time		Notes
			C1	C2	Rf	Rd		typ	max	
32.768kHz	Seiko Epson	C-002RX	18pF	18pF	OPEN	390kΩ	4.5 to 5.5V	1.0s	1.5s	

Notes : The oscillation stabilizing time period is the time until the VCO oscillation for the internal system becomes stable after the following conditions. (Refer to Figure 2.)

1. The V<sub>DD</sub> becomes higher than the minimum operating voltage after the power is supplied.
2. The HOLD mode is released.

The sample oscillation circuit characteristics may differ applications.

For further assistance, please contact with oscillator manufacturer with the following notes in your mind.

- Since the oscillation frequency precision is affected by wiring capacity of the application board, etc., adjust the oscillation frequency on the production board.
- The above oscillation frequency and the operating supply voltage range are based on the operating temperature of -10°C to +70°C. For the use with the temperature outside of the range herein, or in the applications requiring high reliability such as car products, please consult with oscillator manufacturer.
- When using the oscillator which is not shown in the sample oscillation circuit characteristics, please consult with SANYO sales personnel.

Since the oscillation circuit characteristics are affected by the noise or wiring capacity because the circuit is designed with low gain in order to reduce the power dissipation, refer to the following notices.

- The distance between the clock I/O terminal (XT1 terminal XT2 terminal) and external parts should be as short as possible.
- The capacitors' V<sub>SS</sub> should be allocated close to the microcontroller's GND terminal and be away from other GND.
- The signal lines with rapid state changes or with large current should be allocated away from the oscillation circuit.

- Specifications of any and all SANYO Semiconductor products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Semiconductor Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of SANYO Semiconductor Co., Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO Semiconductor product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO Semiconductor believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.
