

INTRODUCTION

The S1L9223B01 is a 1-chip BICMOS integrated circuit to perform the function of RF amp and servo signal processor for compact disc player applications.

It consists of blocks for RF signal processing, focus, tracking, sled and spindle servo. Also this IC has adjustment free function and embedded OP-AMP for audio post filter.

FEATURES

- RF amplifier & RF equalizer
- Focus error amplifier & servo control
- Tracking error amplifier & servo control
- Mirror & defect detector circuit
- Focus OK detector circuit
- APC (Auto Laser Power Control) circuit for constant laser power
- FE bias & focus servo offset adjustment free
- EF balance & tracking error gain adjustment free
- Embedded audio post filter
- The circuit for Interruption countermeasure
- Double speed play available
- Operating voltage range: S1L9223B01: 5V

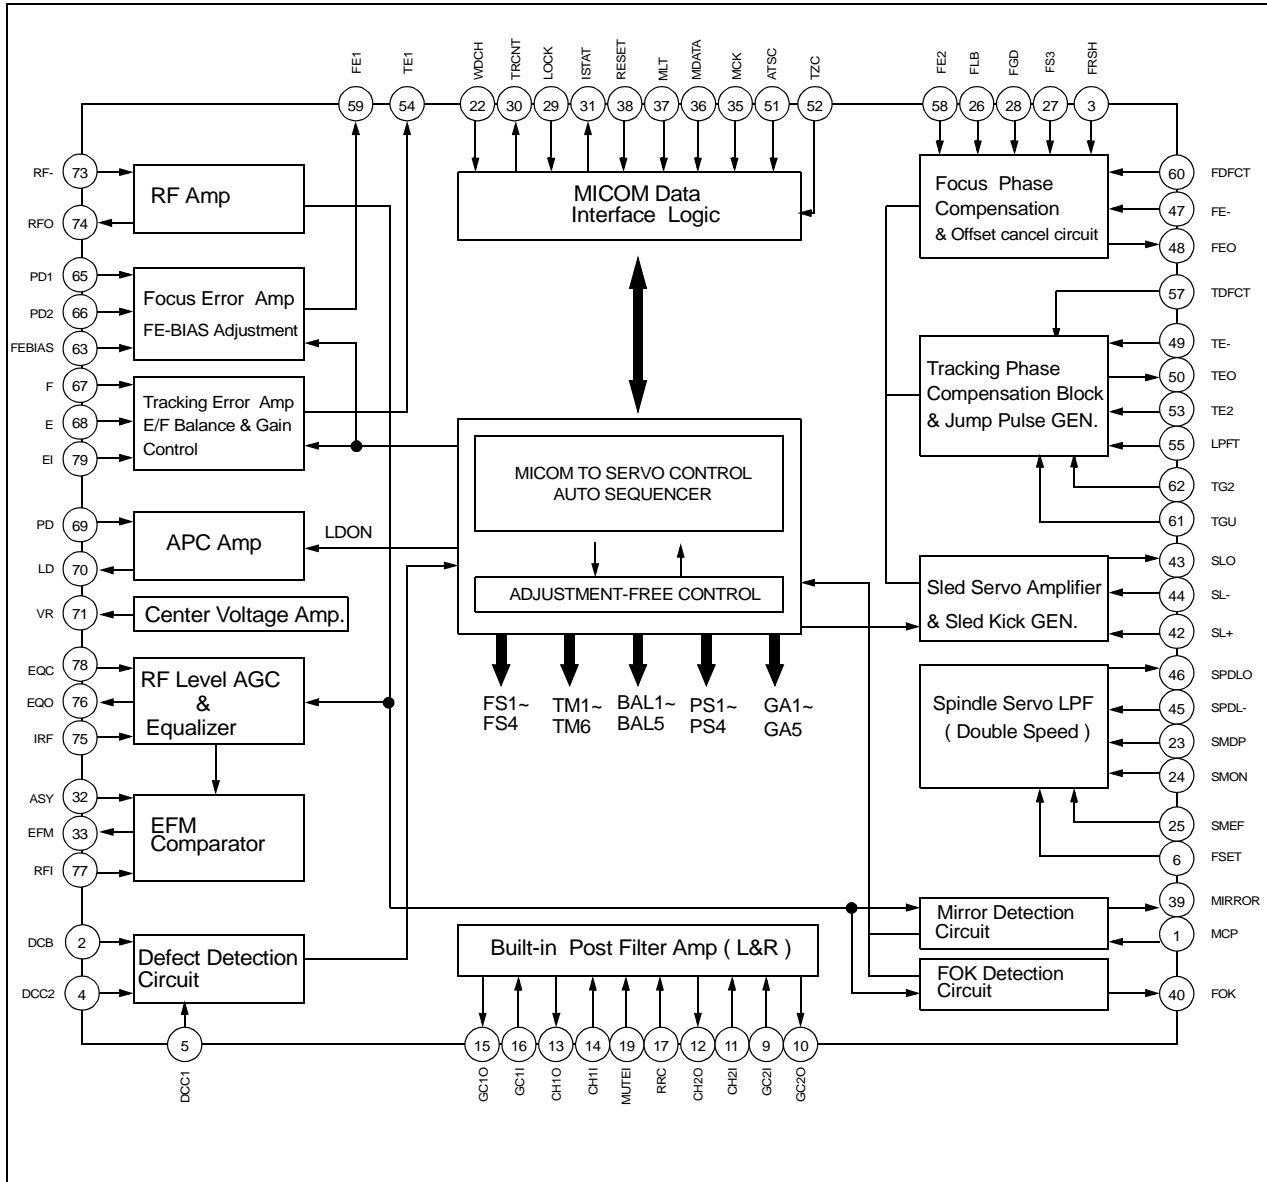

ORDERING INFORMATION

Device	Package	Temperature Range
S1L9223B01-Q0R0	80-QFP-1420C	-20 to +70 °C

RELATED PRODUCT

- S5L9286F01 Data Processor
- S5L9284D Data Processor
- KA9258D/KA9259D Motor Driver

BLOCK DIAGRAM

PIN CONFIGURATION

PIN DESCRIPTION

Pin No.	Symbol	Description
1	MCP	Capacitor connection pin for mirror hold
2	DCB	Capacitor connection pin for defect Bottom hold
3	FRSH	Capacitor connection pin for time constant to generate focus search waveform
4	DCC2	The input pin through capacitor of defect bottom hold output
5	DCC1	The output pin of defect bottom hold
6	FSET	The peak frequency setting pin for focus, tracking servo and cut off frequency of CLV LPF
7	VDDA	Analog VCC for servo part
8	VCCP	VCC for post filter
9	GC2I	Amplifier negative input pin for gain and low pass filtering of DAC output CH2
10	GC2O	Amplifier output pin for gain and low pass filtering of DAC output CH2
11	CH2I	The input pin for post filter channel2
12	CH2O	The output pin for post filter channel2
13	CH1O	The output pin for post filter channel1
14	CH1I	The input pin for post filter channel1
15	GC1O	Amplifier output pin for gain and low pass filtering of DAC output CH1
16	GC1I	Amplifier negative input pin for gain and low pass filtering of DAC output CH1
17	RRC	The pin for noise reduction of post filter bias
18	VSSP	VSS for post filter
19	MUTEI	The input pin for post filter muting control
20	ISET	The input pin for current setting of focus search, track jump and sled kick voltage
21	VREG	The output pin of regulator
22	WDCK	The clock input pin for auto sequence
23	SMDP	The input pin of CLV control output pin SMDP of DSP
24	SMON	The input pin for spindle servo ON through SMON of DSP
25	SMEF	The input pin of provide for an external LPF time constant
26	FLB	Capacitor connection pin to perform rising low bandwidth of focus loop
27	FS3	The pin for high frequency gain change of focus loop with internal FS3 switch
28	FGD	Reducing high frequency gain with capacitor between FS3 pin
29	LOCK	Sled runaway prevention pin
30	TRCNT	Track count output pin
31	ISTAT	Internal status output pin

PIN DESCRIPTION (Continued)

Pin No.	Symbol	Description
32	ASY	The input pin for asymmetry control
33	EFM	EFM comparator output pin
34	VSSA	Analog VSS for servo part
35	MCK	MICOM clock input pin
36	MDATA	MICOM data input pin
37	MLT	MICOM data latch input pin
38	RESET	Reset input pin
39	MIRROR	The mirror output for test
40	FOK	The output pin of focus OK comparator
41	SSTOP	The pin for detection whether pick_up position is innermost or not
42	SL+	The noninverting input pin of sled servo amplifier
43	SLO	The output pin of sled servo amplifier
44	SL-	The inverting input pin of sled servo amplifier
45	SPDL-	The noninverting input pin of spindle servo amplifier
46	SPDLO	The output pin of spindle servo amplifier
47	FE-	The inverting input pin of focus servo amplifier
48	FEO	The output pin of focus servo amplifier
49	TE-	The inverting input pin of tracking servo amplifier
50	TEO	The output pin of tracking servo amplifier
51	ATSC	The input pin for Anti-shock detection
52	TZC	The comparator input pin for tracking zero crossing detection
53	TE2	Tracking servo input pin
54	TE1	Tracking error amplifier output pin
55	LPFT	The input pin of tracking error low pass filtering signal
56	DVDD	The power supply pin for logic circuit
57	TDFCT	The capacitor connection pin for tracking defect compensation
58	FE2	Focus servo input pin
59	FE1	Focus error amplifier output pin
60	FDFCT	The capacitor connection pin for focus defect compensation
61	TGU	The capacitor connection pin for high frequency tracking gain switch
62	TG2	The pin for high frequency gain change of tracking servo loop with internal TG2 switch

PIN DESCRIPTION (Continued)

Pin No.	Symbol	Description
63	FEBIAS	Focus error bias voltage control pin
64	DVEE	The DVEE pin for logic circuit
65	PD1	The negative input pin of RF I/V amplifier1(A+C signal)
66	PD2	The negative input pin of RF I/V amplifier2(B+D signal)
67	F	The negative input pin of F I/V amplifier (F signal)
68	E	The negative input pin of E I/V amplifier (E signal)
69	PD	The input pin for APC
70	LD	The output pin for APC
71	VR	The output pin of $(AVEE+AVCC)/2$ voltage
72	VCC	VCC for RF part
73	RF-	RF summing amplifier inverting input pin
74	RFO	RF summing amplifier output pin
75	IRF	The input pin for AGC
76	EQO	The output pin for AGC
77	RFI	The input pin for EFM comparison
78	EQC	The capacitor connection pin for AGC
79	EI	Feedback input pin of E I/V amplifier for EF Balance control
80	GND	GND for RF part

ABSOLUTE MAXIMUM RATINGS

Characteristic	Symbol	Value	Unit
Supply Voltage	V_{MAX}	6	V
Power Dissipation	P_D	200	mW
Operating Temperature	T_{OPR}	-20 to + 70	°C
Storage temperature	T_{STG}	-55 to + 150	°C

ELECTRICAL CHARACTERISTICS

($T_a=25^{\circ}\text{C}$, $V_{DD} = D_{VDD} = V_{CC} = +5\text{V}$, $V_{SS} = D_{VSS} = \text{GND} = V_{SSP} = 0\text{V}$)

Characteristic	Symbol	Test Conditions	Output	Min.	Typ.	Max.	Unit
Supply Current High	ICCHI	$V_{CC} = 6\text{V}$, No load	–	20	40	60	mA
Supply Current Typ	ICCTY	$V_{CC} = 5\text{V}$, No Load	–	12	30	48	mA
Supply Current Low	ICCLO	$V_{CC} = 3.4\text{V}$, No Load	–	10	25	40	mA
RF Amp Offset Voltage	Vrfo	Input open	pin 74	-80	0	+80	mV
RF Amp Voltage Gain	Grf	SG3 f = 10kHz, 40mVp-p, sine	pin 74	25.1	28.1	31.1	dB
RF THD	Grfmd	SG3 f = 1kHz, 40mVp-p, sine	pin 74	–	–	5	%
RF Amp Max. Output Voltage	Vrfpp1	SG3 DC 2.7V	pin 74	3.8	–	–	V
RF Amp Min. Output Voltage	Vrfpp2	SG3 DC 2.3V	pin 74	–	–	1.2	V
Focus Error Amp Offset Voltage	Vfeo1	input open	pin 59	-450	-250	-50	mV
Focus Error Amp Auto Offset Voltage	Vfeo2	WDCH=88.2kHz Pulse, \$841	pin 59	-35	0	35	mV
Focus Error Amp PD1 Voltage Gain	Gfe1	SG3 f=10kHz, 32mVp-p, sine	pin 59	27	30	33	dB
Focus Error Amp PD2 Voltage Gain	Gfe2	SG3 f = 10kHz, 32mVp-p, sine	pin 59	27	30	33	dB
Focus Error Amp Voltage Difference	Gfe Δ	$\Delta Gfe1 - \Delta Gfe1$	pin 59	-3	0	+3	dB
Focus Error Amp Max. Output Voltage	Gfepp1	SG3 DC 2.7V	pin 59	4.4	–	–	V
Focus Error Amp Min. Output Voltage	Gfepp2	SG3 DC 2.3V	pin 59	–	–	0.6	V

ELECTRICAL CHARACTERISTICS (Continued)(Ta=25°C, V_{DD} = D_{VDD} = V_{CC} = +5V, V_{SS} = D_{VSS} = GND = V_{SSP} = 0V)

Characteristic	Symbol	Test Conditions	Output	Min.	Typ.	Max.	Unit
AGC Max Gain	Gagc	SG4 f = 500kHz, 20mVp-p, sine	pin 76	16	19	22	dB
AGC EQ Gain	Geq	Gain Difference of Gagc at f = 1.5MHz	pin 76	0	1	2	dB
AGC Gain2	Gagc2	SG4 f = 500kHz, 0.5Vp-p, sine	pin 76	3.5	6	9	dB
AGC Compress Ratio	Cagc	Gain Difference of Gagc2 at 0.1Vp-p	pin 76	0	2.5	5	dB
AGC Frequency	Fagc	Gain Difference SG4 f=1.5MHz,0.1Vp-p,sine and f=500kHz,0.1Vp-p,sine	pin 76	-1.5	0	2.5	dB
Tracking Error Offset Voltage	Vteo	\$800, \$820, input open	pin 54	-50	0	+50	mV
Tracking Error Amp Voltage Gain F	Gtef	\$800, \$820 SG3 0.3Vp-p, 10kHz, sine	pin 54	2.1	5.1	8.1	dB
Tracking Error Amp Voltage Gain E	Gtee	SG3 0.3Vp-p, 40kHz, sine	pin 54	-0.75	2.25	5.25	dB
Tracking Error Amp Voltage Gain Difference	GteΔ	Gtef-Gtee	pin 54	-0.25	2.75	5.75	dB
Tracking Error Amp Maximum Output Voltage H	Vtepp1	DG3 DC 4.5V	pin 54	3.5	-	-	V
Tracking Error Amp Minimum Output Voltage L	Vtepp2	SG3 DC 0.5V	pin 54	-	-	1.5	V
Tracking Error Amp Gain up F	Tguf	\$830 SG3 0.3Vp-p, 10kHz, sine	pin 54	8.0	11.0	14.0	dB
Tracking Error Amp Gain up E	Tgue	\$830 SG3 0.3Vp-p, 10kHz, sine	pin 54	5.3	8.3	11.3	dB

FUNCTIONAL DESCRIPTION

RF AMP BLOCK

RF AMPLIFIER

The optical currents input through pins PD1(A+C) and PD2(B+D) are converted into voltages through I-V amp, and they are added to RF summing amp. The voltage, converted from the photo diode (A+B+C+D) signal, is output through RFO (pin74) and the eye pattern can be checked at this pin.

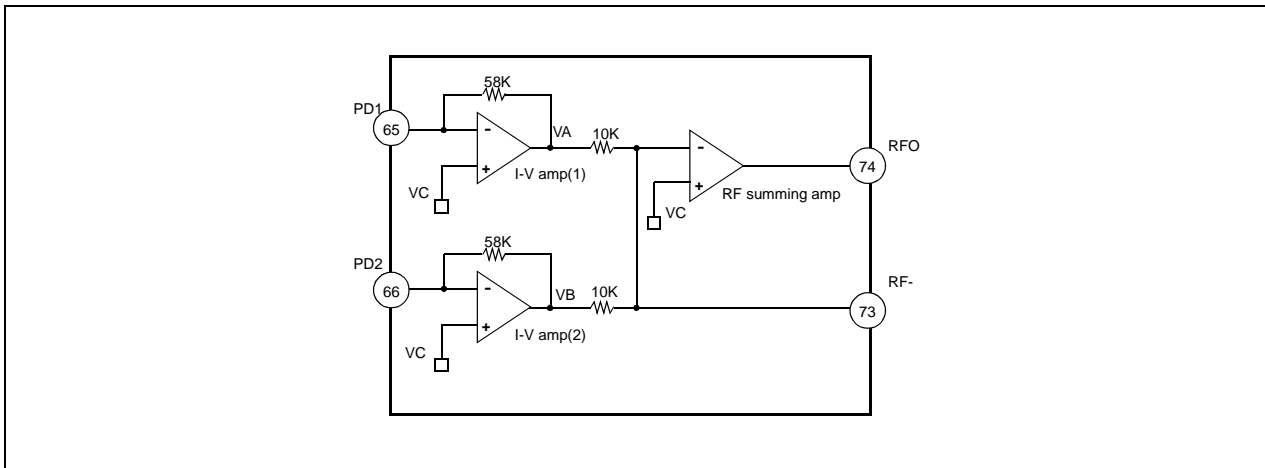

Figure 1. RF Amplifier Circuit

FOCUS ERROR AMP

The output of the focus error amp is the difference between I-V amp(1) output VA and

RF I-V amp(2) output VB. The focus error bias voltage applied to the (+) of focus error amp can be changed by output voltage of D/A converter as shown in diagram, so that the offset of focus error amp can be adjusted automatically by controlling 5 bits counter switches. Focus error bias can be adjusted from the range of +100mV — -100mV by connecting the resistor on pin 63 (FEBIAS).

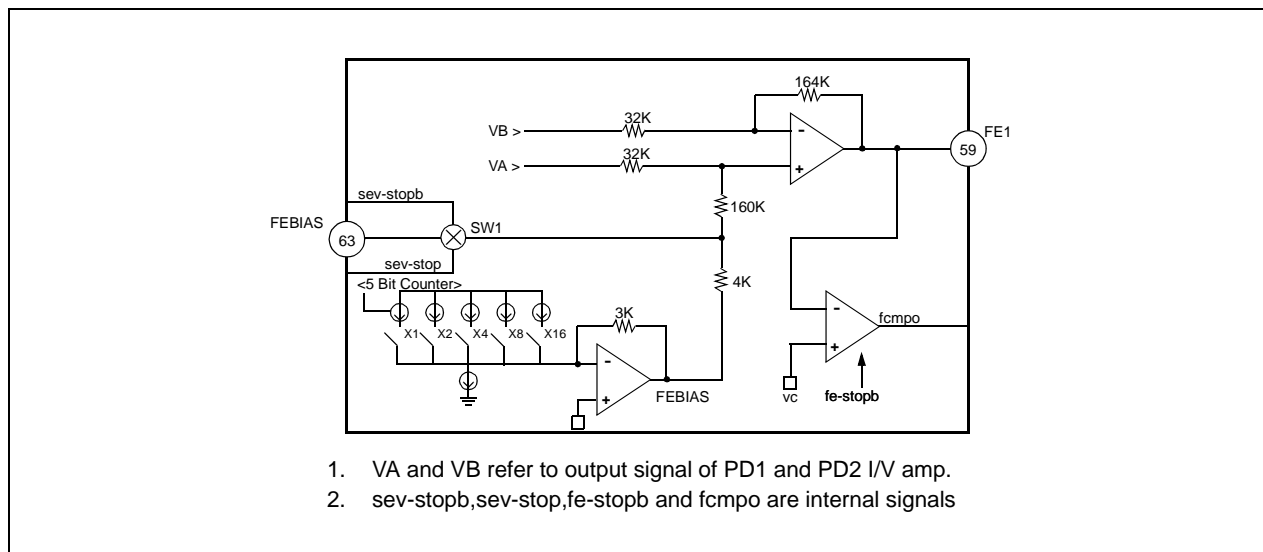

Figure 2. Focus Error Amplifier Circuit

TRACKING ERROR AMP

The optical currents detected from the side photo diode (E and F) pf pick-up are input to the E and F pin and converted into voltage signals by E I-V and F I-V amp. The output of tracking error amp generates the difference between E I-V AMP and F I-V AMP voltage output.

The E-F balance can be adjusted by modifying the gain of E I-V AMP, and the tracking gain can be adjusted automatically by controlling the peak voltage at pin TE2 by MICOM program.

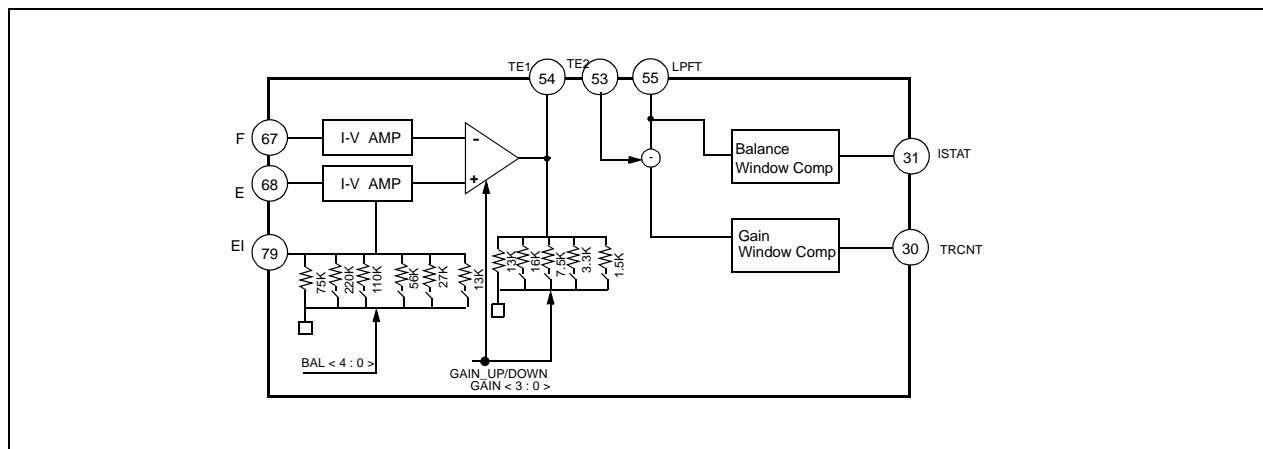

Figure 3. Tracking Error Amplifier Circuit

FOCUS OK CIRCUIT

The FOK is the output. The focus OK circuit generates a timing window to enable focus servo operation from focus search status. When the difference of the RFO (pin74) signal and DC coupled signal IRF (pin75) are above the predefined voltage the Focus OK circuit output (pin40) becomes active (High output). The predefined voltage is - 0.39V

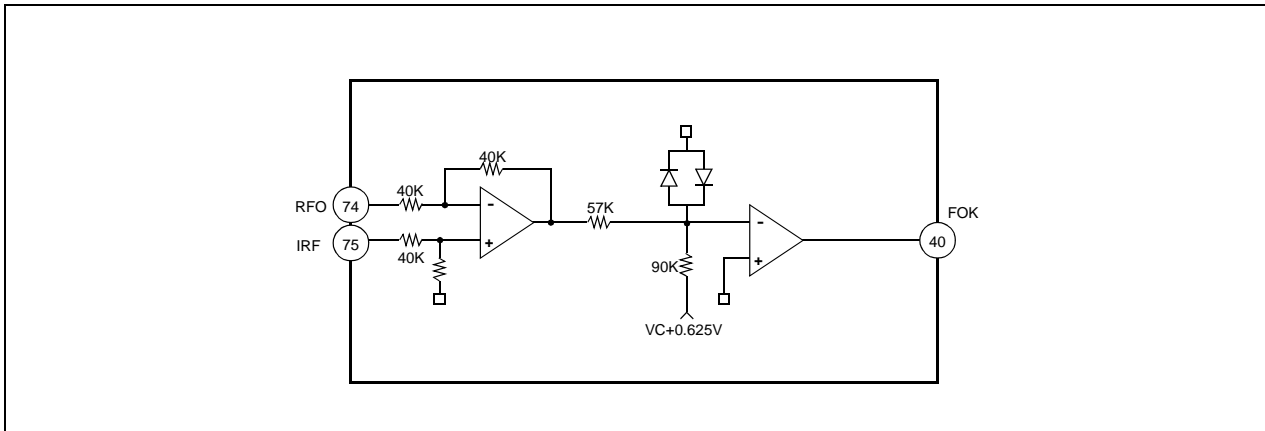

Figure 4. Focus OK Circuit

MIRROR CIRCUIT

IRF signal is amplified by the mirror amp, and the peak and bottom component of amplified signal are detected by peak and bottom hold circuit. The peak hold circuit covers traverse signal of up to 100KHz component and bottom hold circuit capable of covering the envelope frequency of disc rotation. The time constant for the mirror hold must be sufficiently larger than that of the traverse signal.

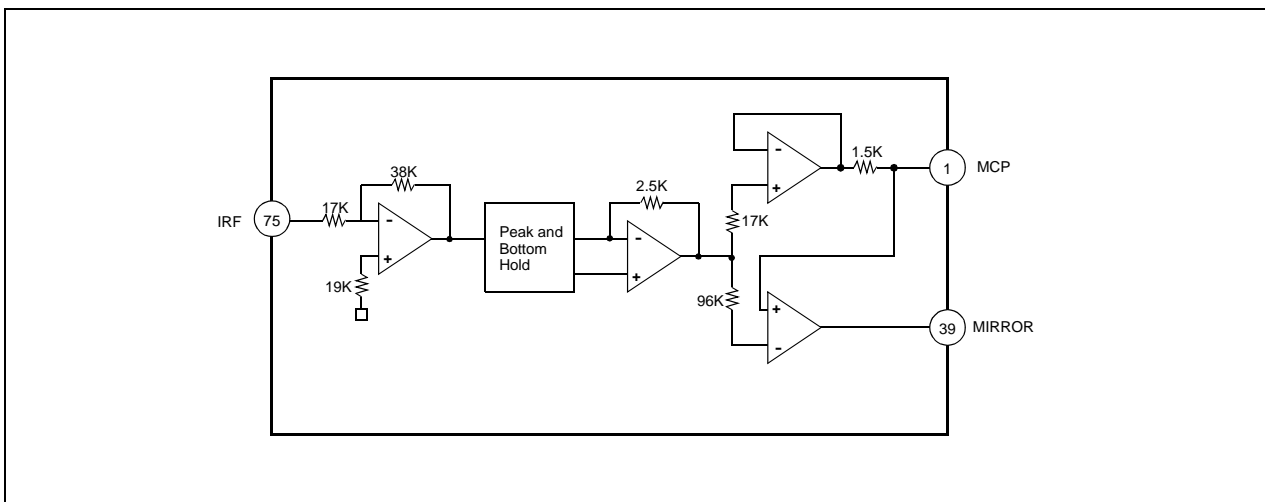

Figure 5. Mirror Circuit

EFM COMPARATOR

The EFM comparator converts a RF signal into a binary signal.

Because the asymmetry generated due to variations in disc manufacturing can not be eliminated by the AC coupling alone, this circuit uses to control reference voltage of EFM comparator for eliminating asymmetry.

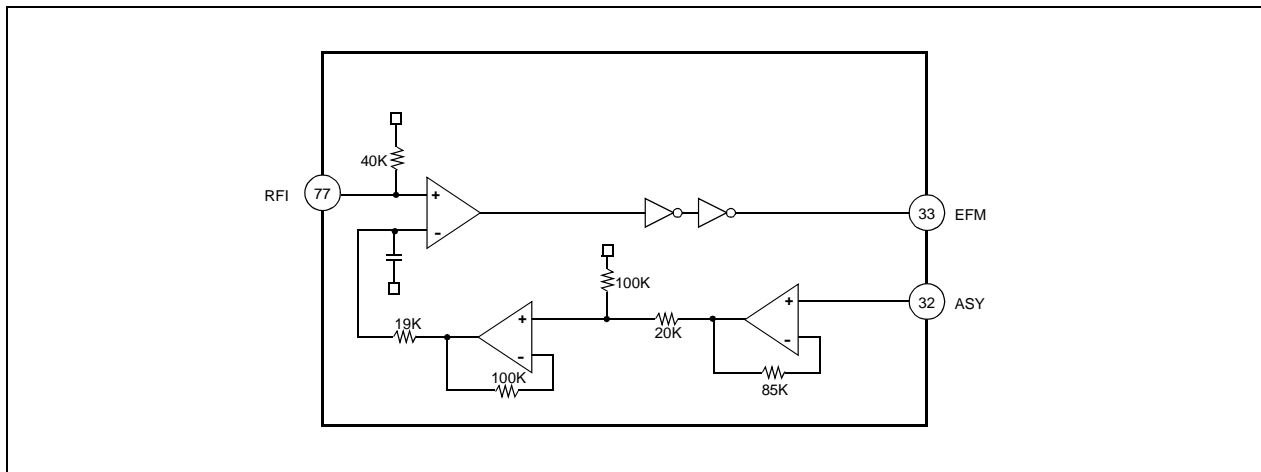

Figure 6. EFM Comparator & Asymmetry Circuit

DEFECT CIRCUIT

The RFO signal bottom, after being inverted, is held with two time constants of long and short.

The short time-constant bottom hold is done for a disc mirror defect more than 0.1msec, the long time-constant bottom hold is done with the mirror level prior to the defect. By differentiating this with a capacitor coupling and shifting the level, both signals are compared to generate the mirror defect detection signal.

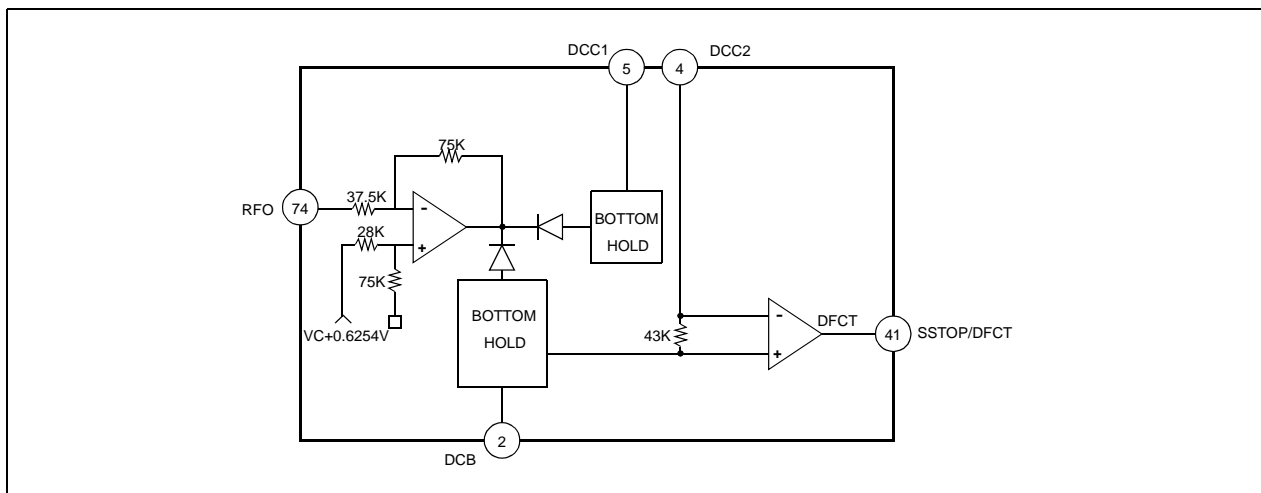

Figure 7. Defect Circuit

APC (AUTO POWER CONTROL) CIRCUIT

The laser diode has large negative temperature characteristic in its optical output when driven with a constant current on laser diode. Therefore, the output on processing monitor photo diode, must be a controlled current for getting regular output power, thus the APC (Auto Power Control) circuit is composed.

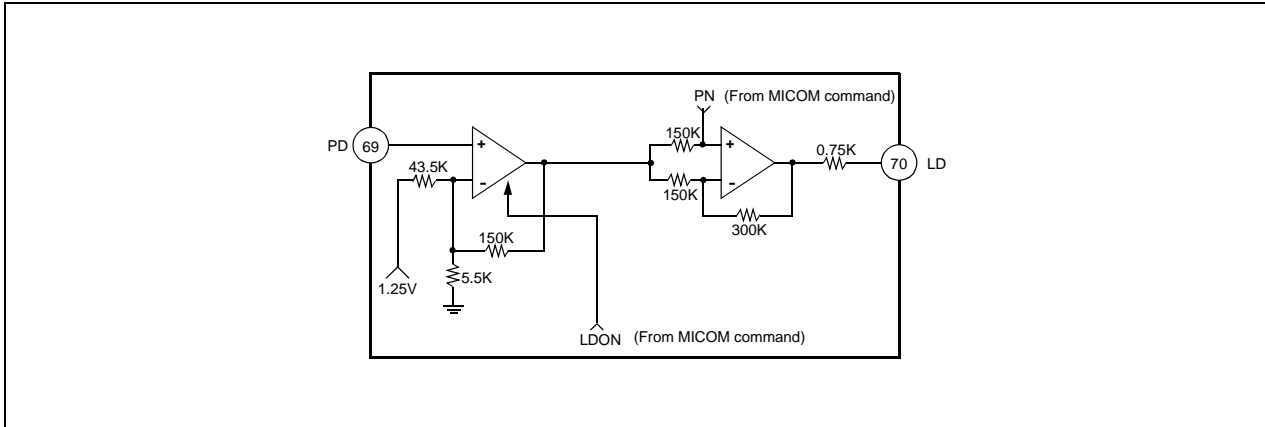

Figure 8. APC Circuit

AGC STABILITY CIRCUIT

The AGC block is the function used to maintain the constant level of RF peak to peak voltage. After the operation of RF envelop detection and comparing with reference voltage, RFO level is kept stable in 1Vp-p, and input to EFM Slice.

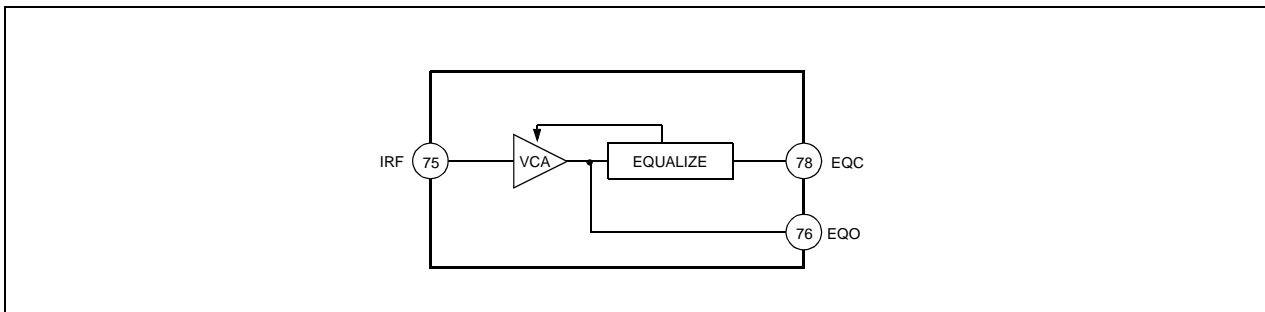

Figure 9. AGC Block

POST FILTER

The adjustment of audio output gain and the integration of possible de-emphasis output are executed by this circuit. This block has amps of 2 channel for gain and filter setting and mute pin for audio signal muting.

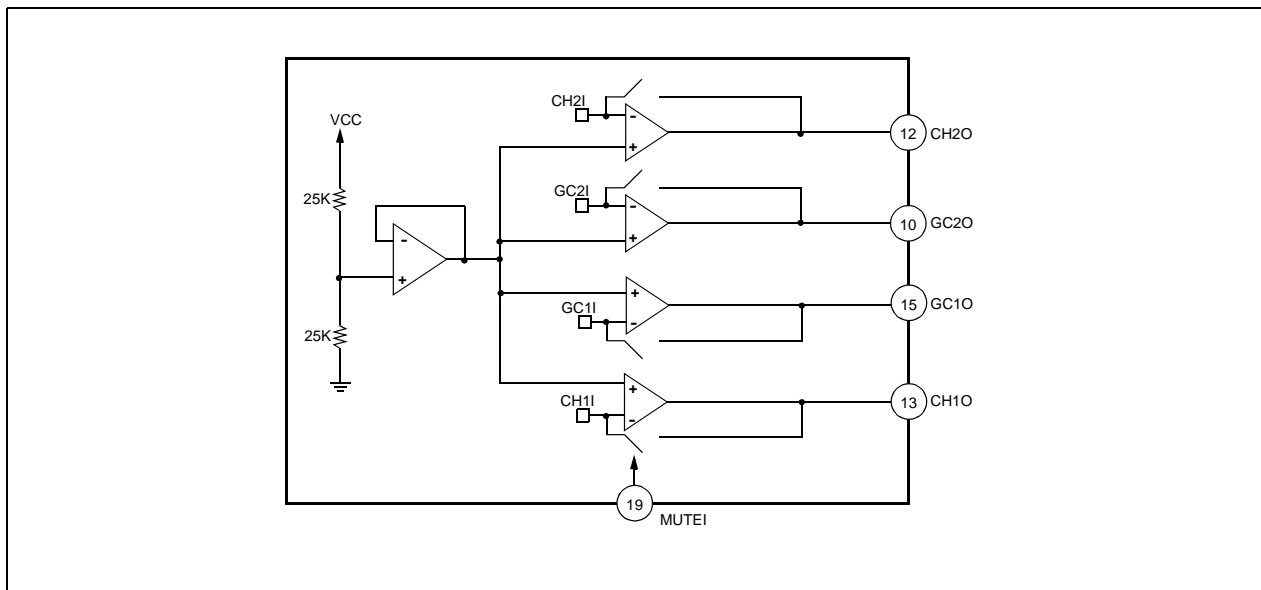

Figure 10. Post Filter Circuit

CENTER VOLTAGE GENERATION CIRCUIT

The center voltage is generated by voltage divide using resistor.

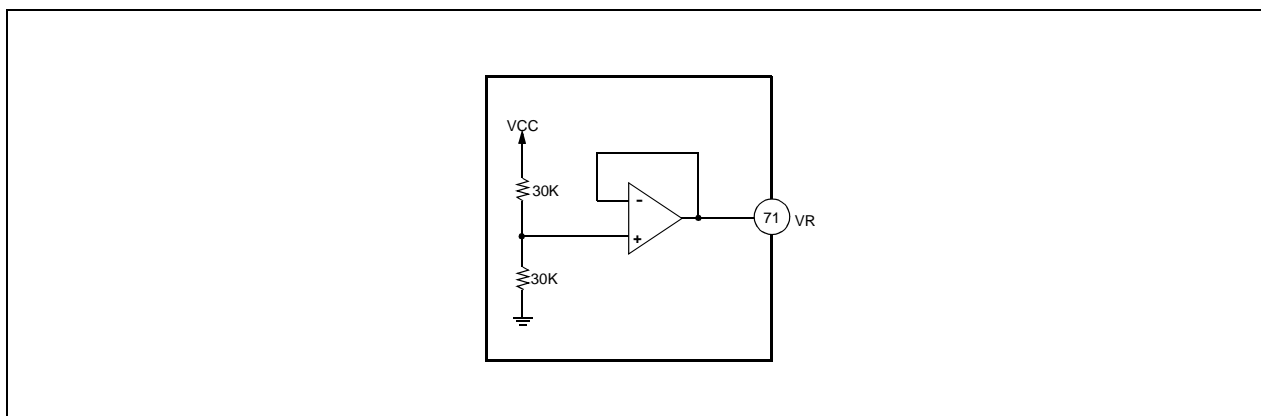

Figure 11. Center Voltage Generation Circuit

SERVO BLOCK

FOCUS SERVO BLOCK

When defect is "H" (the defect signal is detected), the focus servo loop is muting in case of focus phase compensation. At this time, the focus error signal is output through the low pass filter formed by connecting a capacitor (0.1μF) and a built-in 470KΩ resistor to the FDFCT pin (pin 60). Accordingly, the focus error output is held at the error value just before defect error during defect occurring. The peak frequency of focus loop phase compensation is at about 1.2KHz when the resistor connected to FSET pin (pin 6) is 510KΩ, and it is inversely proportional to the resistor connected to the FSET pin. While the focus search is operating, the FS4 switch is on and then the focus error signal is isolated, accordingly the focus search signal is output by FEO pin (pin 48). When the FS2 switch is on (focus on), the focus servo loop is on and the focus error signal from FE2 pin (pin 58) is output through the focus servo loop.

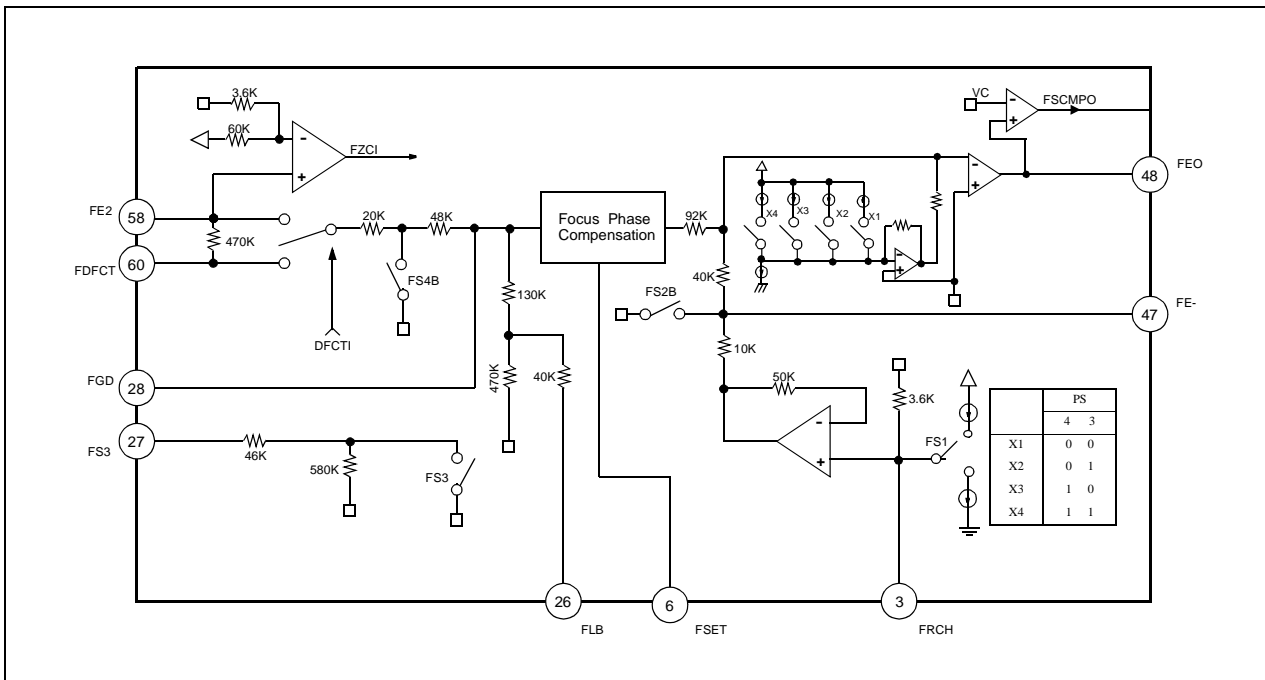

Figure 12. Focus Servo Block

SLED SERVO BLOCK

The moving of pick-up is controlled by tracking servo output through a low pass filter. The sled kick voltage is output for track jump operation.

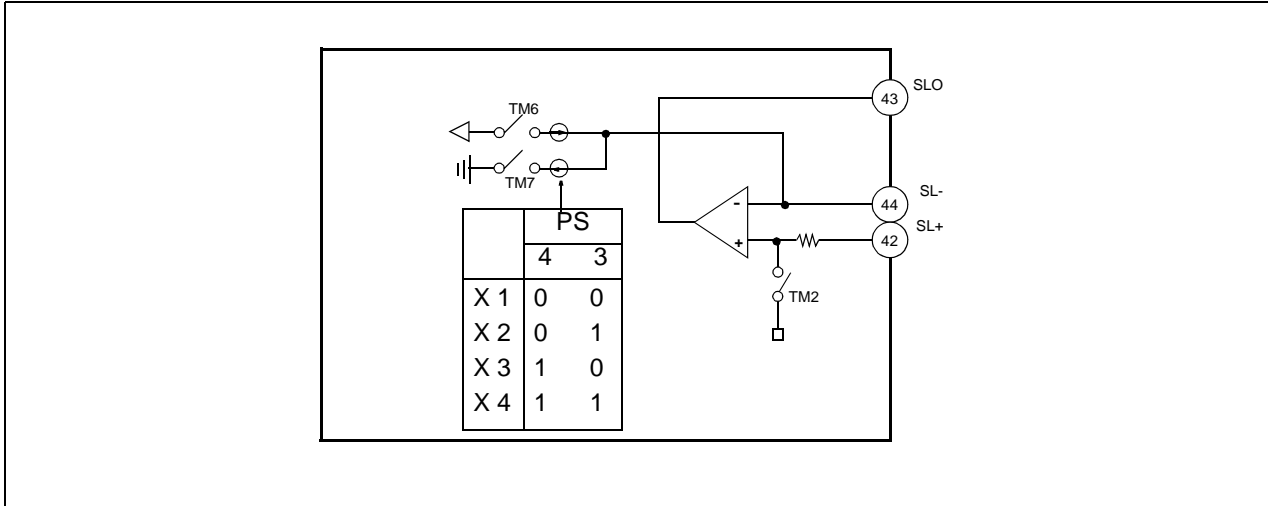

Figure 14. Sled Servo Block

SPINDLE SERVO BLOCK

The 20KΩ resistor and 0.33μF capacitor form the 200Hz low pass filter, and the carrier component of spindle servo error signals is eliminated. In CLV-S mode, SMEF becomes "L" and pin 25 low pass filter fc lowers, strengthening the filter further. The characteristics of high frequency phase compensation in focus tracking servo and the characteristics of cut off frequency in CLV low pass filter are tested by FSET pin.

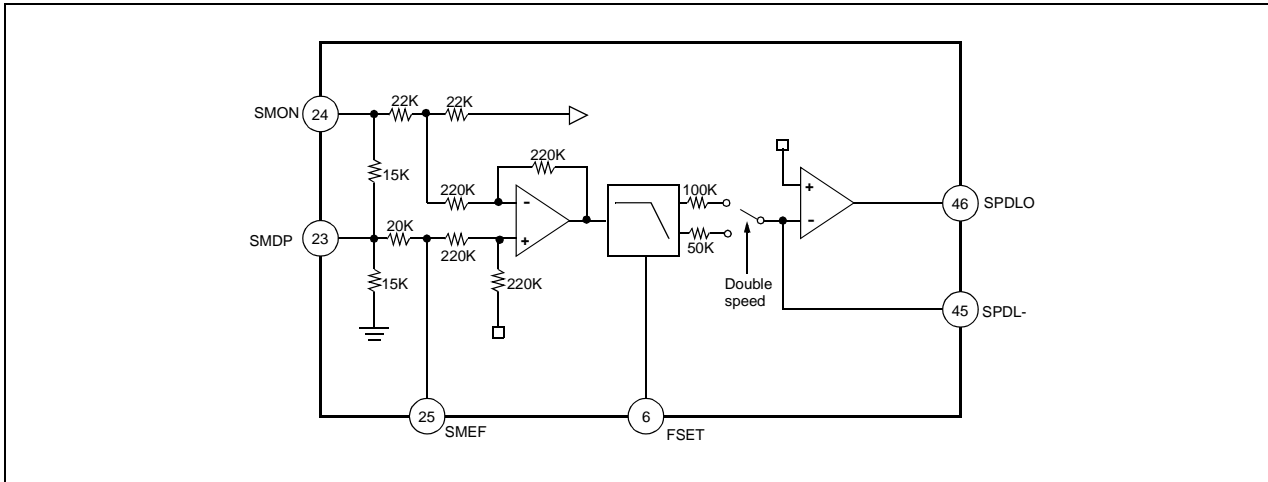

Figure 15. Spindle Servo Block

DIGITAL BLOCK

DESCRIPTION

Digital block is transferred serial data by MICOM and 8-bit serial data is converted to parallel data by serial to parallel register. This data is decoded by latch signal. The status output of focus servo, tracking servo and sled servo system, etc. It is determined by each data. The auto-sequence function process 2 — 4 MICOM command by one auto-sequence command.

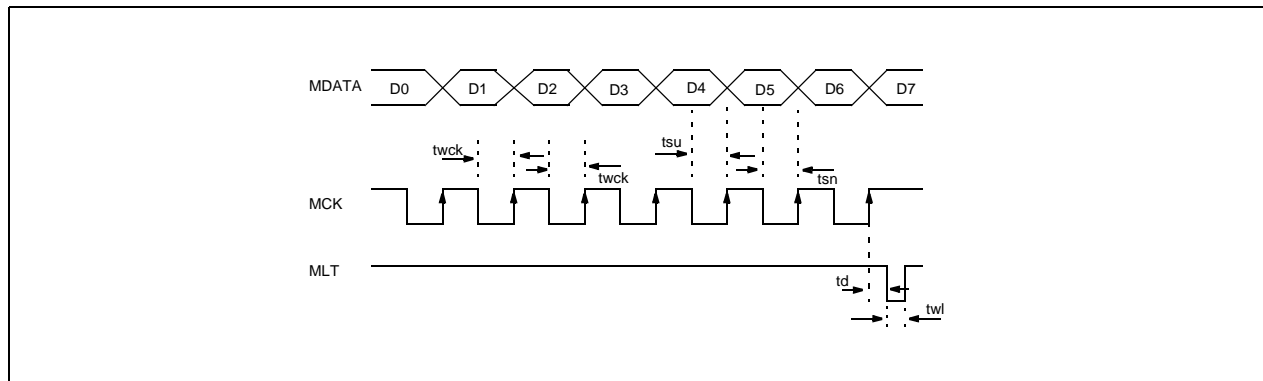

Figure 16. CPU Serial Interface Timing Chart

Focus Control (\$0X)

This command consists of 8 bits data and expressed by two hexa \$0X.

D7	D6	D5	D4	D3	D2	D1	D0	ISTAT
0	0	0	0	FS4	FS3	FS2	FS1	FZC

FS4, FS3, FS2, FS1: internal switch for focus control

- Focus Search Operation (FS2,FS1)
 - \$02: FS2 switch become off and the value of servo output pin is as below.
(10μA-5μA)*50k*(feedback Resistor/50k)
 - \$03: If FS1 switch is 1, the current supply is cut off and the discharge is performed.
The waveform is as below and the time constant is determined by internal resistor 50K and external Cap.

Figure 17. Waveform at Pin 3 When FS1 Is Switched from 0 to 1

The waveform of servo output pin according to FS1 and FS2 switches is as below.

Figure 18. Focus Search Waveform at Pin 48 by \$02 and \$03

FS4 is switch for on/off control of focus servo loop

\$00: Focus servo off

\$08: Focus servo on

Tracking Control (\$1X)

This command is used for tracking loop gain control, break circuit and anti-shock on/off control.

D7	D6	D5	D4	D3	D2	D1	D0	ISTAT
0	0	0	1	Anti shock on/off	Break circuit on/off	TG2	TG1	Anti shock

TG2 and TG1 are internal switch for tracking gain set.

Tracking mode (\$2X)

This command is used for tracking and sled servo on/off and jump for searching track.

D7	D6	D5	D4	D3	D2	D1	D0	ISTAT
0	0	1	0	Tracking control		Sled control		TZC

<Tracking control & Sled control>

D3	D2	Tracking mode	D1	D0	Sled mode
0	0	Tracking servo off	0	0	Sled servo off
0	1	servo on	0	1	servo on
1	0	Forward jump	1	0	Forward kick
1	1	Reverse jump	1	1	Reverse kick

Peak value set (\$3X)

This command is used for the peak value setting of focus search and sled kick.

D0, D1: Sled kick

D2, D3: Focus search peak value

Auto Sequencer command (\$4X)

This command is used for reducing control time and replacing several command by one auto- sequence command.

- Auto sequencer mode is performed from the first falling edge of WDCK clock after the falling of the latch pulse.
- Auto sequencer does not carry out tracking gain up, brake, anti-shock and focus gain down.
- MICOM checks ISTAT pin (/BUSY) and sends to \$40 command to reset preceding auto sequencer status

	Hexa	AS3	AS2	AS1	AS0	Remark
Cancel	\$40	0	0	0	0	Reset
Auto focus	\$47	0	1	1	1	–
1 Track jump	\$48	1	0	0	0	Forward
	\$49	1	0	0	1	Reverse
10 Track jump	\$4A	1	0	1	0	Forward
	\$4B	1	0	1	1	Reverse
2N track jump	\$4C	1	1	0	0	Forward
	\$4D	1	1	0	1	Reverse
M track move	\$4E	1	1	1	0	Forward
	\$4F	1	1	1	1	Reverse

RAM Set (\$5X — \$7X)

The value of RAM set is somewhat different to the actual count and the initial value is like below

Item	Initial value	Actual Count Value
Blind	\$55	Set value +4 — 5 WDCK clock
overflow, Brake		Set value +3 WDCK clock
Kick	\$67	Set value +5 WDCK clock
2N, M Track jump	\$7E	Set value +3 WDCK clock

AUTO ADJUSTMENT COMMAND

This command is used for auto control of offset, balance, gain adjustment and reference voltage setting. This command is also in control of on/off and sub type of laser diode and test or set mode.

TRACKING BALANCE (\$800 — \$81F)

Item	Hexa	Data (5bits)	Initial value	ISTAT (pin31)	TRCNT (pin30)
Tracking balance	\$800 — \$81F	D4 — D0	\$81F	BAL	TRCNT

TRACKING GAIN (\$820 — \$83F)

Item	Hexa	Data 5bits)	Initial value	ISTAT (pin31)	TRCNT (pin30)
Tracking gain	\$820 — \$83F	D4 — D0	\$820	GAIN	TGL

TRACKING BALANCE & GAIN WINDOW LEVEL SETTING

Item	Hexa	D3	D2	D1	D0	Initial value
window level setting	\$84X	gain	balance	0	0	\$840

NOTE: The tracking balance and gain window level is set by D2,D3 data and the value has two kinds of window levels set

TRACKING BALANCE WINDOW LEVEL

	D2 Data	0	1
Tracking balance window level		-10 to +15 mV	-20 to +20 mV

TRACKING GAIN WINDOW LEVEL

	D3 Data	0	1
Tracking gain window level		250 to 400 mV	150 to 300 mV

FOCUS LOOP OFFSET ADJUSTMENT START COMMAND (\$841, \$842)

This command is used for adjusting focus error bias and removing focus servo offset. It is executed during laser diode off.

Hexa command	meaning
\$841	Focus error bias adjustment start command
\$842	Focus servo offset cancel adjustment start command

APC CIRCUIT OPERATION AND INTERRUPTION ON/OFF SETTING CONDITION (\$85X)

This command is used for setting of laser diode on/off, sub type (P_sub or N_sub) of laser diode and interruption countermeasure circuit on/off.

Item	Hexa	D3	D2	D1	D0	Initial value
APC & Interruption on/off condition	\$85X	LD on/off 0: On 1: Off	Sub-type 0: N_sub 1: P_sub	Interruption ON/OFF and time setting		\$858

Time setting for Interruption countermeasure circuit on/off

D1	D0	Meaning
0	0	Countermeasure circuit on for all mirror signal
0	1	Countermeasure circuit on up to 20kHz mirror signal
1	0	Countermeasure circuit off
1	1	Countermeasure circuit on up to 10kHz mirror signal

FOCUS SERVO OFFSET RESET COMMAND AND SET MODE COMMAND (86X)

This command is used for set and release before focus servo loop offset adjustment and mode change.

Item	Hexa	D3	D2	D1	D0
Set mode & Focus servo offset reset command	\$86X	0: offset release 1: offset reset	option(Pin41 output) 0: Defect 1: SSTOP	1	1

NOTES:

1. The set mode command is sent by MICOM right after tracking gain is tuned.
2. The ISTAT pin is outputted the internal status of \$00 ~ \$7X command.

DIRECT COMMAND (DIRC) AND FOCUS BIAS RESET COMMAND (\$87X)

This command is used for direct 1 track jump on/off setting and focus bias adjustment set and release

Item	Hexa	D3	D2	D1	D0
DIRC & focus bias reset	\$87X	0: DIRC On 1: DIRC Off	0: reset 1: reset release	X	X
