KS58015

DTMF DIALER FOR BINARY DATA-IN

INTRODUCTION

The KS58015 is a DTMF dialer for 4 bit binary data input from microprocessor. When the tone enable input low, the oscillator is inhibited and the device is in a low power consumption at standby mode. On the low to high transition of tone enable, data is latched into the device and selected the standard DTMF signals. The N-channel open drain output provides a MUTE output during tone

The N-channel open drain output provides a MUTE output during tone generation.

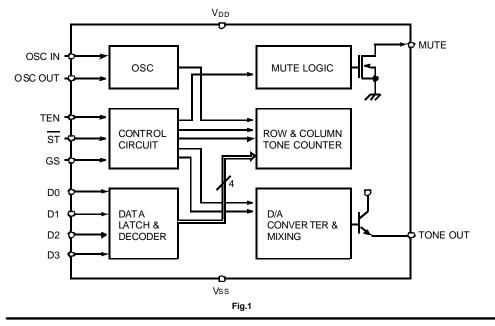

FEATURES

- Direct interface with microprocessor
- Generates 16 standard tones
- Uses inexpensive TV crystal or ceramic resonator (3.579545MHz)
- Very low total harmonic distortion
- Low power standby mode
- Binary data inputs with latches
- Wide Operating Voltage : 2.5 ~ 8.0V
- Device
 Package
 Operating Temperature

 KS58015N
 14-DIP-300
 - 30°C ~ + 70°C

 KS58015D
 14-SOP-225B
 - 30°C ~ + 70°C

BLOCK DIAGRAM

PIN CONFIGURATION

PIN DESCRIPTION

Pin No	Symbol	Descriptions				
1	V _{DD}	Positive supply input				
2	TEN	Tone enable input. An internal pull-up resistor is in a chip. When this pin connects to logic 'low', the oscillator is inhibited and the tone generators and output transistor are turned off. A low to high transition on this pin latches in data from D0 ~ D3, and tone generation continues until this pin is connected 'low' again.				
3	IT	Single tone enable. An internal pull-up resistor is in a chip. When this pin connects to logic 'low', the device is in a single tone mode. For normal operation, connects this pin to V_{DD} or open-circuit.				
4	GS	Group selection input. This pin is used to select the high group or low group frequency, when the device is in single tone mode. An internal pull-up resistor is in a chip. When this pin connects to V_{DD} or open, the high group will be generated, and when connects to V_{SS} , the low group will be generated.				
5	Vss	Negative supply input				
6	OSC IN	Oscillator input				
7	OSC OUT	Oscillator output				
8	MUTE	N-channel open drain output. This pin is a logic high state, when the tone enable pin is a high state. This pin goes a logic low state, when the tone enable pin is a low state.				
9, 10,	D0, D1,	DATA-INPUTS. These are the inputs for binary-coded data, which is latched in on				
11, 12	D2, D3	the rising edge of the tone enable signal.				
13	N.C	No connection.				
14	Tone out	This output is the open emitter of a NPN transistor. When an external load resistor is connected from this pin to V_{SS} , the tone generates on the tone enable pin = 'High'.				

ABSOLUTE MAXIMUM RATINGS

Characteristic	Symbol	Value	Unit
Supply Voltage	V _{DD}	9	V
MUTE Voltage	V _{I (MUTE)}	9	V
Input Voltage	VI	V _{DD} + 0.3 ~ V _{SS} - 0.3	V
Power Dissipation	PD	500	mW
Operating Temperature	T _{OPR}	- 30 ~ + 70	°C
Storage Temperature	T _{STG}	- 55 ~ + 125	°C

ELECTRICAL CHARACTERISTICS

(V_{SS} = 0V, 2V < V_{DD} < 8V, f_{OSC} = 3.579545 MHz, Ta = 25 ^{\circ}C, unless otherwise noted)

Characteristic	Symbol	Test Conditions	Min	Тур	Max	Unit
Operating Voltage Range	perating Voltage Range V _{DD}		2.0		8.0	V
Operating Current	I _{DD}	V_{DD} = 3.0V, MUTE Open			1.5	mA
Standby Current	I _{SB}	R_L = 10K, D0~D3 open, V_{DD} = 3.0V		50	100	μΑ
Input Pull-up Resistance	Input Pull-up Resistance RI (PULL) DI0 ~ DI3, TEN			100		KΩ
Input Voltage	VIL	DI0 ~ DI3, TEN	V _{SS}		$0.2V_{DD}$	V
Input Voltage	VIH	DI0 ~ DI3, TEN	$0.8V_{DD}$		V _{DD}	V
Output Oursest (MUTE)	IOL (MUTE)	$V_{\text{DD}} = 3V, V_{\text{O}} = 0.5, \text{TEN} = \text{LOW}$	0.5	1.5		mA
Output Current (MUTE)	I _{OH (MUTE)}	$V_{\text{DD}} = 3V, V_{\text{O}} = V_{\text{DD}}, \text{TEN} = \text{HIGH}$		1	2	μΑ
Tone Output Level	V _{O (TONE)}	$V_{DD} = 3V, R_L = 5K\Omega, Row Tone$	-14		-11	dBV
Ratio of Column to Row	dB _{CR}	$V_{DD} = 3V, R_L = 5 K\Omega$	1	2	3	dB
THD (Dual Tone)	THD	1MHz Bandwidth, V_{DD} = 5V, R_L =5K Ω	-20			dB
Oscillator Start-up Time t _{ST (OSC)} 90% Amplitudes, V _{DD} = 3.0V			4		mS	
Data Set-up Time t _{SU (DATA)} V _{DD} = 3.0V		200			nS	
Data Hold Time	t _{H (DATA)}	$V_{DD} = 3.0V$	200			nS
Data Duration	t _{W (DATA)}	$V_{DD} = 3.0V$	600			nS

APPLICATION INFORMATION

FUNCTION DESCRIPTION

When tone enable input is low, oscillator is inhibited, being allowed to low power standby mode since transistor goes to turn off state, so D0 ~ D3 input data is ignored.

However if tone enable input goes from low to high, input data is latched and tone output is enabled, and it is correspond to data input.

This device is designed with 14 levels, 28 segments in each single-tone. The column tone is pre-emphasized 2dB than the row tone.

TABLE1. SINGLE TONE FREQUENCY

Tone Group	Standard DTMF (Hz)	Tone Output Actual Frequency	% Deviation from Standard
ROW 1	697	699.13	+ 0.31
ROW 2	770	766.17	- 0.50
ROW 3	852	845.43	- 0.54
ROW 4	941	947.97	+ 0.74
COLUMN 1	1209	1215.89	+ 0.57
COLUMN 2	1336	1331.67	- 0.33
COLUMN 3	1477	1471.85	- 0.35
COLUMN 4	1633	1645.01	+ 0.75
