M74LS273P

OCTAL POSITIVE EDGE-TRIGGERED D-TYPE FLIP FLOP WITH RESET

DESCRIPTION

The M74LS273P is a semiconductor integrated circuit containing 8 D-type positive edge-triggered flip-flop circuits with common direct reset and clock inputs.

FEATURES

- Positive edge-triggering
- High mounting density with 8 circuits contained
- Direct reset and clock inputs common to all 8 circuits
- Wide operating temperature range (T_a = −20~+75°C)

APPLICATION

General purpose, for use in industrial and consumer equipment.

FUNCTIONAL DESCRIPTION

This device contains 8 edge-triggered D-type flip-flop circuits and it is provided with direct reset $\overline{R_D}$ input and clock input T common to all 8 circuits. When T changes in each flip-flop from low to high, the data input signal D immediately before the change appears in output Q.

When $\overline{R_D}$ is set low, 1Q through 8Q are all set low irrespective of the status of the ID through 8D and T signals. For use as a D-type flip-flop, $\overline{R_D}$ must be kept in high.
