M62362P/FP

1280 RESOLUTION 3CH MULTIPLYING D-A CONVERTER

DESCRIPTION

The M62362P is an integrated circuit semiconductor of CMOS structure with 3 channels of built-in 1280 step resolution(equivalent 10.3-bit)multiplication type D-A converters.

hod and it is able to cascading serial use with Do terminal.

The device is suited for use in high accuracy automatic adjustment combination with microcomputer.

FEATURES

- Digital data transfer method
  3-wire serial data transfer method
- High resolution
  Resolution is more over 10-bit and error is less than ±1 LSB
- Capable of 4 quadrant multiplication
- Short setting time
- With reset terminal

V_{DD}=5V±10%

APPLICATION

Signal gain control of DISPLAY-MONITOR or CTV.
Conversion from digital control data to analog control data for home-use and industrial equipment.
Automatic adjustment by combination with EEPROM and microcomputer.(replacement of conventional half-fixed

NOTICE
M62362 have 5 terminals these are input free voltage at use.(V_{DD}, $V_{IN}1$,$V_{IN}2$,$V_{IN}3$,V_{DA}ref)If Ripple and Spike is input to these terminals,accuracy of conversion is down .So,When use this device, please connect capacitor among to each terminals and GND for stable operation.
