4-BIT SINGLE-CHIP MICROCONTROLLER

The μPD75P3036 replaces the μPD753036's internal mask ROM with a one-time PROM or EPROM.

Because the μPD75P3036 supports programming by users, it is suitable for use in prototype testing for system development using the μPD753036 and for use in small-scale production.

★ **Caution The μPD75P3036KK-T is not designed to guarantee the reliability required for use in mass-production. Please use it only for performance evaluation during testing and test production runs.**

Detailed descriptions of functions are provided in the following document. Be sure to read the document before designing.

μ**PD753036 User's Manual : U10201E**

FEATURES

- Compatible with μPD753036
- Internal PROM: 16384×8 bits
  - μPD75P3036KK-T   : Reprogrammable (ideally suited for system evaluation)
  - μPD75P3036GC, 75P3036GK : One-time programmable (ideally suited for small-scale production)
- Internal RAM: 768×4 bits
- Can operate in the same power supply voltage as the mask version μPD753036
  - V_{DD} = 1.8 to 5.5 V
- LCD controller/driver
- A/D converter

Caution   Mask-option pull-up resistors are not provided in this device.

In this document, the term PROM is used in parts common to one-time PROM versions and EPROM versions.

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.
Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.

ORDERING INFORMATION

Part Number	Package	Internal PROM	Quality Grade
μPD75P3036GC-3B9	80-pin plastic QFP (14 × 14 mm, 0.65-mm pitch)	One-time PROM	Standard
★ μPD75P3036GC-3B9-A	80-pin plastic QFP (14 × 14 mm, 0.65-mm pitch)	One-time PROM	Standard
μPD75P3036GK-BE9	80-pin plastic TQFP (fine pitch) (12 × 12 mm, 0.5-mm pitch)	One-time PROM	Standard
★ μPD75P3036GK-BE9-A	80-pin plastic TQFP (fine pitch) (12 × 12 mm, 0.5-mm pitch)	One-time PROM	Standard
★ μPD75P3036KK-T	80-pin ceramic WQFN	EPROM	Not applicable

Remark Products with "-A" at the end of the part number are lead-free products.

Please refer to "Quality Grades on NEC Semiconductor Devices" (Document No. C11531E) published by NEC Electronics Corporation to know the specification of quality grade on the devices and its recommended applications.

Functional Outline

| Parameter		Function
Instruction execution time		• 0.95, 1.91, 3.81, 15.3 μs (main system clock: during 4.19-MHz operation) • 0.67, 1.33, 2.67, 10.7 μs (main system clock: during 6.0-MHz operation) • 122 μs (subsystem clock: during 32.768-kHz operation)
Internal memory	PROM	16384 × 8 bits
	RAM	768 × 4 bits
General purpose register		• 4-bit operation: 8 × 4 banks • 8-bit operation: 4 × 4 banks
Input/ output port	CMOS input	8	On-chip pull-up resistors can be specified by using software: 27
	CMOS input/output	20	
	Bit port output	8	Also used for segment pins
	N-ch open-drain input/output pins	8	13 V withstand voltage
	Total	44	
LCD controller/driver		• Segment selection: 12/16/20 segments (can be changed to bit port output in unit of 4; max. 8) • Display mode selection: Static, 1/2 duty (1/2 bias), 1/3 duty (1/2 bias), 1/3 duty (1/3 bias), 1/4 duty (1/3 bias)
Timer		5 channels • 8-bit timer/event counter: 3 channels (16-bit timer/event counter, carrier generator, timer with gate) • Basic interval/watchdog timer: 1 channel • Watch timer: 1 channel
Serial interface		• 3-wire serial I/O mode ... MSB or LSB can be selected for transferring first bit • 2-wire serial I/O mode • SBI mode
A/D converter		8-bit resolution: 8 channels
Bit sequential buffer (BSB)		16 bits
Clock output (PCL)		• Φ, 524, 262, 65.5 kHz (main system clock: during 4.19-MHz operation) • Φ, 750, 375, 93.8 kHz (main system clock: during 6.0-MHz operation)
Buzzer output (BUZ)		• 2, 4, 32 kHz (main system clock: during 4.19-MHz operation or subsystem clock: during 32.768-kHz operation) • 2.86, 5.72, 45.8 kHz (main system clock: during 6.0-MHz operation)
Vectored interrupt		External: 3, Internal: 5
Test input		External: 1, Internal: 1
System clock oscillator		• Ceramic or crystal oscillator for main system clock oscillation • Crystal oscillator for subsystem clock oscillation
Standby function		STOP/HALT mode
Power supply voltage		V_{DD} = 1.8 to 5.5 V
Package		• 80-pin plastic QFP (14 × 14 mm) • 80-pin plastic TQFP (fine pitch) (12 × 12 mm) • 80-pin ceramic WQFN

3. PIN FUNCTIONS

3.1 Port Pins (1/2)

Pin name	I/O	Alternate function	Function	8-bit I/O	Status after reset	I/O circuit type[Note 1]
P00	Input	INT4	This is a 4-bit input port (PORT0). Connection of an on-chip pull-up resistor can be specified in 3-bit units by software for P01 to P03.	No	Input	<B>
P01	I/O	$\overline{\text{SCK}}$				<F>-A
P02	I/O	SO/SB0				<F>-B
P03	I/O	SI/SB1				<M>-C
P10	Input	INT0	This is a 4-bit input port (PORT1). Connection of an on-chip pull-up resistor can be specified in 4-bit units by software. P10/INT0 can select noise elimination circuit.	No	Input	<B>-C
P11		INT1				
P12		INT2				
P13		TI0				
P20	I/O	PTO0	This is a 4-bit I/O port (PORT2). Connection of an on-chip pull-up resistor can be specified in 4-bit units by software.	No	Input	E-B
P21		PTO1				
P22		PCL/PTO2				
P23		BUZ				
P30	I/O	LCDCL/MD0	This is a programmable 4-bit I/O port (PORT3). Input and output can be specified in bit units. Connection of an on-chip pull-up resistor can be specified in 4-bit units by software.	No	Input	E-B
P31		SYNC/MD1				
P32		MD2				
P33		MD3				
P40[Note 2]	I/O	D0	This is an N-ch open-drain 4-bit I/O port (PORT4). When set to open-drain, voltage is 13 V. Also functions as data I/O pin (lower 4 bits) for program memory (PROM) write/verify.	Yes	High impedance	M-E
P41[Note 2]		D1				
P42[Note 2]		D2				
P43[Note 2]		D3				
P50[Note 2]	I/O	D4	This is an N-ch open-drain 4-bit I/O port (PORT5). When set to open-drain, voltage is 13 V. Also functions as data I/O pin (upper 4 bits) for program memory (PROM) write/verify.		High impedance	M-E
P51[Note 2]		D5				
P52[Note 2]		D6				
P53[Note 2]		D7				

Notes 1. Circuit types enclosed in brackets indicate Schmitt trigger input.
   2. Low level input leakage current increases when input instructions or bit manipulate instructions are executed.

3.1 Port Pins (2/2)

Pin name	I/O	Alternate function	Function	8-bit I/O	Status after reset	I/O circuit type[Note 1]
P60	I/O	KR0	This is a programmable 4-bit I/O port (PORT6). Input and output can be specified in bit units. Connection of an on-chip pull-up resistor can be specified in 4-bit units by software.	Yes	Input	<F>-A
P61		KR1				
P62		KR2				
P63		KR3				
P70	I/O	KR4	This is a 4-bit I/O port (PORT7). Connection of an on-chip pull-up resistor can be specified in 4-bit units by software.		Input	<F>-A
P71		KR5				
P72		KR6				
P73		KR7				
P80	I/O	TI1	This is a 4-bit I/O port (PORT8). Connection of an on-chip pull-up resistor can be specified in 4-bit units by software.	No	Input	<E>-E
P81		TI2				
P82		AN6				Y-B
P83		AN7				
BP0	Output	S24	These pins are also used as 1-bit I/O port (BIT PORT) segment output pin.	No	**Note 2**	H-A
BP1		S25				
BP2		S26				
BP3		S27				
BP4	Output	S28				
BP5		S29				
BP6		S30				
BP7		S31				

Notes 1. Circuit types enclosed in brackets indicate Schmitt trigger input.

★   **2.** BP0 through BP7 select V_{LC1} as an input source.

         However, the output levels change depending on the external circuit of BP0 through BP7 and V_{LC1}.

★   **Example**   Because BP0 through BP7 are mutually connected inside the μPD75P3036, the output levels of BP0 through BP7 are determined by R_1, R_2, and R_3.

3.2 Non-port Pins (1/2)

Pin name	I/O	Alternate function	Function		Status after reset	I/O circuit type[Note]
TI0	Input	P13	External event pulse input to timer/event counter		Input	<B>-C
TI1		P80				<E>-E
TI2		P81				
PTO0	Output	P20	Timer/event counter output		Input	E-B
PTO1		P21				
PTO2		P22/PCL				
PCL	Output	P22/PTO2	Clock output		Input	E-B
BUZ	Output	P23	Frequency output (for buzzer or system clock trimming)		Input	E-B
$\overline{\text{SCK}}$	I/O	P01	Serial clock I/O		Input	<F>-A
SO/SB0	I/O	P02	Serial data output Serial data bus I/O		Input	<F>-B
SI/SB1	I/O	P03	Serial data input Serial data bus I/O		Input	<M>-C
INT4	Input	P00	Edge detection vectored interrupt input (valid for detecting both rising and falling edges)		Input	<B>
INT0	Input	P10	Edge detection vectored interrupt input (detected edge is selectable) INT0/P10 can select noise elimination circuit.	Noise elimination circuit /asynchronous is selectable	Input	<B>-C
INT1		P11		Asynchronous		
INT2	Input	P12	Rising edge detection test input	Asynchonous	Input	<B>-C
KR0 to KR3	Input	P60 to P63	Parallel falling edge detection test input		Input	<F>-A
KR4 to KR7	Input	P70 to P73	Parallel falling edge detection test input		Input	<F>-A
X1	Input	—	Ceramic/crystal oscillation circuit connection for main system clock. If using an external clock, input to X1 and input inverted phase to X2.		—	—
X2	—	—				
XT1	Input	—	Crystal oscillation circuit connection for subsystem clock. If using an external clock, input to XT1 and input inverted phase to XT2. <u>XT1 can be used as a 1-bit (test) input.</u>		—	—
XT2	—	—				
$\overline{\text{RESET}}$	Input	—	System reset input (low level active)		—	<B>
MD0	I/O	P30/LCDCL	Mode selection for program memory (PROM) write/verify		Input	E-B
MD1		P31/SYNC				
MD2, MD3		P32, P33				
D0 to D3	I/O	P40 to P43	Data bus for program memory (PROM) write/verify		Input	M-E
D4 to D7		P50 to P53				
V_{PP}	—	—	Programmable power supply voltage for program memory (PROM) write/verify. For normal operation, connect to V_{DD}. Apply +12.5 V for PROM write/verify.		—	—
V_{DD}	—	—	Positive power supply		—	—
V_{SS}	—	—	Ground		—	—

Note   Circuit types enclosed in brackets indicate Schmitt trigger input.

3.2 Non-port Pins (2/2)

Pin name	I/O	Alternate function	Function	Status after reset	I/O circuit type
S12 to S23	Output	—	Segment signal output	**Note 1**	G-A
S24 to S31	Output	BP0 to BP7	Segment signal output	**Note 1**	H-A
COM0 to COM3	Output	—	Common signal output	**Note 1**	G-B
V_{LC0} to V_{LC2}	—	—	Power source for LCD driver	—	—
BIAS	Output	—	Output for external split resistor cut	High impedance	—
LCDCL[Note 2]	Output	P30/MD0	Clock output for driving external expansion driver	Input	E-B
SYNC[Note 2]	Output	P31/MD1	Clock output for synchronization of external expansion driver	Input	E-B
AN0 to AN5	Input	—	Analog signal input for A/D converter	Input	Y
AN6		P82			Y-B
AN7		P83			
AV_{REF}	—	—	A/D converter reference voltage	—	Z-N
AV_{SS}	—	—	A/D converter reference GND potential	—	Z-N

Notes 1. The V_{LCX} (X = 0, 1, 2) shown below are selected as the input source for the display outputs.

S12 to S31: V_{LC1}, COM0 to COM2: V_{LC2}, COM3: V_{LC0}

2. These pins are provided for future system expansion. Currently, only P30 and P31 are used.

3.3 Pin Input/Output Circuits

The input/output circuits for the μPD75P3036's pins are shown in schematic form below.

(1/3)

TYPE A

CMOS standard input buffer

TYPE D

Push-pull output that can be set to output high-impedance
(with both P-ch and N-ch OFF).

TYPE B

Schmitt trigger input with hysteresis characteristics.

TYPE E-B

P.U.R. : Pull-Up Resistor

TYPE B-C

P.U.R. : Pull-Up Resistor

TYPE E-E

P.U.R. : Pull-Up Resistor

TYPE F-A

P.U.R. : Pull-Up Resistor

TYPE G-B★

TYPE F-B

P.U.R. : Pull-Up Resistor

TYPE H-A★

TYPE G-A★

TYPE M-C

P.U.R. : Pull-Up Resistor

(3/3)

TYPE M-E ★

data
output disable
input instruction

N-ch (+13 V withstand voltage)
IN/OUT
VDD
P-ch
P.U.R.[Note]
Voltage limitation circuit
(+13 V withstand voltage)

Note The pull-up resistor operates only when an input instruction is executed (current flows from VDD to the pin when the pin is low).

TYPE Y-B

VDD
P.U.R. enable
P-ch
data
output disable
Type D
IN/OUT
port[Note] input
Type A
Type Y

P.U.R. : Pull-Up Resistor

TYPE Y

IN
P-ch
N-ch
Sampling C
VDD
AVSS
input enable
VDD
+
−
AVSS
reference voltage (from voltage tap of series resistor string)

TYPE Z-N ★

AVREF
reference voltage
ADEN
N-ch
AVSS

Note Becomes active when an input instruction is executed.

★ ### 3.4 Recommended Connection of Unused Pins

Pin	Recommended connection
P00/INT4	Connect to V_{SS} or V_{DD}
P01/$\overline{SCK}$	Connect to V_{SS} or V_{DD} via a resistor individually
P02/SO/SB0	
P03/SI/SB1	Connect to V_{SS}
P10/INT0 to P12/INT2	Connect to V_{SS} or V_{DD}
P13/TI0	
P20/PTO0	Input status : connect to V_{SS} or V_{DD} via a resistor individually.
P21/PTO1	Output status: open
P22/PTO2/PCL	
P23/BUZ	
P30/LCDCL	
P31/SYNC	
P32, P33	
P40 to P43	Connect to V_{SS}
P50 to P53	
P60/KR0 to P63/KR3	Input status : connect to V_{SS} or V_{DD} via a resistor individually.
P70/KR4 to P73/KR7	Output status: open
P80/TI1	
P81/TI2	
P82/AN6	
P83/AN7	
S12 to S23	Open
S24/BP0 to S31/BP7	
COM0 to COM3	
V_{LC0} to V_{LC2}	Connect to V_{SS}
BIAS	Connect to V_{SS} only when V_{LC0} to V_{LC2} are all not used. In other cases, leave open.
XT1[Note]	Connect to V_{SS} or V_{DD}
XT2[Note]	Open
AN0 to AN5	Connect to V_{SS} or V_{DD}
V_{PP}	Connect to V_{DD} directly

Note When the subsystem clock is not used, set SOS.0 to 1 (so as not to use the internal feedback resistor).

4. Mk I MODE AND Mk II MODE SELECTION FUNCTION

Setting a stack bank selection (SBS) register for the μPD75P3036 enables the program memory to be switched between Mk I mode and Mk II mode. This function is applicable when using the μPD75P3036 to evaluate the μPD753036.

When the SBS bit 3 is set to 1 : sets Mk I mode (supports Mk I mode for μPD753036)
When the SBS bit 3 is set to 0 : sets Mk II mode (supports Mk II mode for μPD753036)

4.1 Difference between Mk I Mode and Mk II Mode
Table 4-1 lists points of difference between the Mk I mode and the Mk II mode for the μPD75P3036.

Table 4-1. Difference between Mk I Mode and Mk II Mode

Item		Mk I Mode	Mk II Mode
Program counter		PC_{13-0}	
Program memory (bytes)		16384	
Data memory (bits)		768 x 4	
Stack	Stack bank	Selectable via memory banks 0 to 2	
	No. of stack bytes	2 bytes	3 bytes
Instruction	BRA !addr1 instruction CALLA !addr1 instruction	Not available	Available
Instruction execution time	CALL !addr instruction	3 machine cycles	4 machine cycles
	CALLF !faddr instruction	2 machine cycles	3 machine cycles
Supported mask ROM versions		When set to Mk I mode for μPD753036	When set to Mk II mode for μPD753036

★ **Caution** **The Mk II mode supports a program area exceeding 16 Kbytes for the 75X and 75XL series. Therefore, this mode is effective for enhancing software compatibility with products exceeding 16 Kbytes.**
When the Mk II mode is selected, the number of stack bytes used during execution of subroutine call instructions increases by one byte per stack compared to the Mk I mode. When the CALL !addr and CALLF !faddr instructions are used, the machine cycle becomes longer by one machine cycle. Therefore, use the Mk I mode if the RAM efficiency and processing performance are more important than software compatibility.

4.2 Setting of Stack Bank Selection Register (SBS)

Use the stack bank selection register to switch between Mk I mode and Mk II mode. Figure 4-1 shows the format for doing this.

The stack bank selection register is set using a 4-bit memory manipulation instruction. When using the Mk I mode, be sure to initialize the stack bank selection register to 10xxB**Note** at the beginning of the program. When using the Mk II mode, be sure to initialize it to 00xxB**Note**.

Note   Set the desired value for xx.

Figure 4-1. Format of Stack Bank Selection Register

```
Address     3     2     1     0     Symbol
F84H  | SBS3 | SBS2 | SBS1 | SBS0 |  SBS
```

Stack area specification

0	0	Memory bank 0
0	1	Memory bank 1
1	0	Memory bank 2
1	1	Setting prohibited

0	Be sure to enter "0" for bit 2.

Mode selection specification

0	Mk II mode
1	Mk I mode
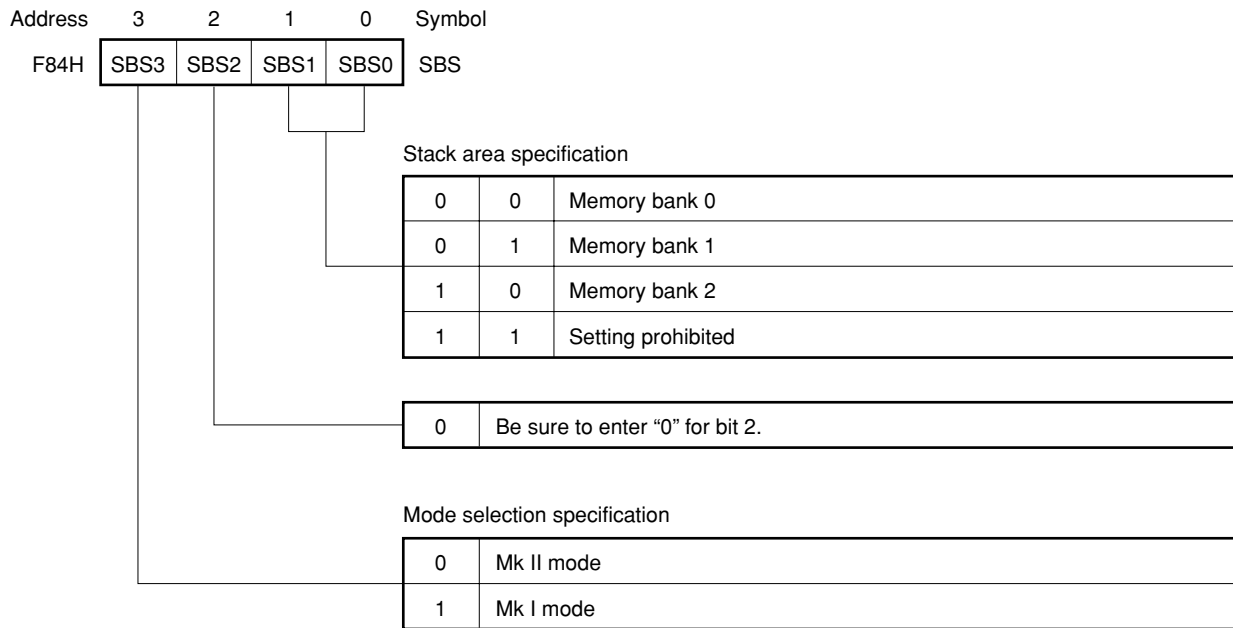

Cautions 1. SBS3 is set to "1" after $\overline{\text{RESET}}$ input, and consequently the CPU operates in Mk I mode. When using instructions for Mk II mode, set SBS3 to "0" and set Mk II mode before using the instructions.

2. When using Mk II mode, execute a subroutine call instruction and an interrupt instruction after $\overline{\text{RESET}}$ input and after setting the stack bank selection register.

5. DIFFERENCES BETWEEN μPD75P3036 AND μPD753036

The μPD75P3036 replaces the internal mask ROM in the program memory of the μPD753036 with a one-time PROM or EPROM. The μPD75P3036's Mk I mode supports the Mk I mode in the μPD753036 and the μPD75P3036's Mk II mode supports the Mk II mode in the μPD753036.

Table 5-1 lists differences among the μPD75P3036 and the μPD753036. Be sure to check the differences among these products before using them with PROMs for debugging or prototype testing of application systems or, later, when using them with a mask ROM for full-scale production.

As to CPU function and on-chip hardware, see the **User's Manual**.

Table 5-1. Differences between μPD75P3036 and μPD753036

Item		μPD753036	μ**PD75P3036**
Program counter		14 bits	
Program memory (bytes)		16384	16384
		Mask ROM	One-time PROM, EPROM
Data memory (x 4 bits)		768	
Mask option	Pull-up resistor of ports 4, 5	Yes (can specify whether to incorporate on-chip or not)	No (don't incorporate on-chip)
	Split resistor for LCD driving power supply		
	Selection of oscillation stabilization wait time	Yes (can select either $2^{17}/f_X$ or $2^{15}/f_X$)[Note]	No (fixed to $2^{15}/f_X$)[Note]
	Selection of subsystem clock feedback resistor	Yes (can select either use enabled or use disabled)	No (use enabled)
Pin configuration	Pin No. 29 to 32	P40 to P43	P40/D0 to P43/D3
	Pin No. 34 to 37	P50 to P53	P50/D4 to P53/D7
	Pin No. 50	P30/LCDCL	P30/LCDCL/MD0
	Pin No. 51	P31/SYNC	P31/SYNC/MD1
	Pin No. 52	P32	P32/MD2
	Pin No. 53	P33	P33/MD3
	Pin No. 69	IC	V_{PP}
Other		Noise resistance and noise radiation may differ due to the different circuit sizes and mask layouts.	

Note $2^{17}/f_X$ is 21.8 ms during 6.0-MHz operation, and 31.3 ms during 4.19-MHz operation.
$2^{15}/f_X$ is 5.46 ms during 6.0-MHz operation, and 7.81 ms during 4.19-MHz operation.

Caution **Noise resistance and noise radiation are different in PROM and mask ROM versions. In transferring to mask ROM versions from the PROM version in a process between prototype development and full production, be sure to fully evaluate the mask ROM version's CS (not ES).**

6. PROGRAM COUNTER (PC) AND MEMORY MAP

6.1 Program Counter (PC) ... 14 bits
This is a 14-bit binary counter that stores program memory address data.

Figure 6-1. Configuration of Program Counter

PC13	PC12	PC11	PC10	PC9	PC8	PC7	PC6	PC5	PC4	PC3	PC2	PC1	PC0	PC
6.2 Program Memory (PROM) ... 16384 x 8 bits
The program memory consists of 16384 x 8-bit one-time PROM or EPROM.

• Addresses 0000H and 0001H

Vector table wherein the program start address and the values set for the RBE and MBE at the time a $\overline{\text{RESET}}$ signal is generated are written. Reset start is possible from any address.

• Addresses 0002H to 000DH

Vector table wherein the program start address and the values set for the RBE and MBE by each vectored interrupt are written. Interrupt processing can start from any address.

• Addresses 0020H to 007FH

Table area referenced by the GETI instruction[Note].

Note The GETI instruction realizes a 1-byte instruction on behalf of any 2-byte/3-byte instruction, or two 1-byte instructions. It is used to decrease the number of program steps.

Figure 6-2 shows the addressing ranges for the program memory, branch instruction and the subroutine call instruction.

Figure 6-2. Program Memory Map
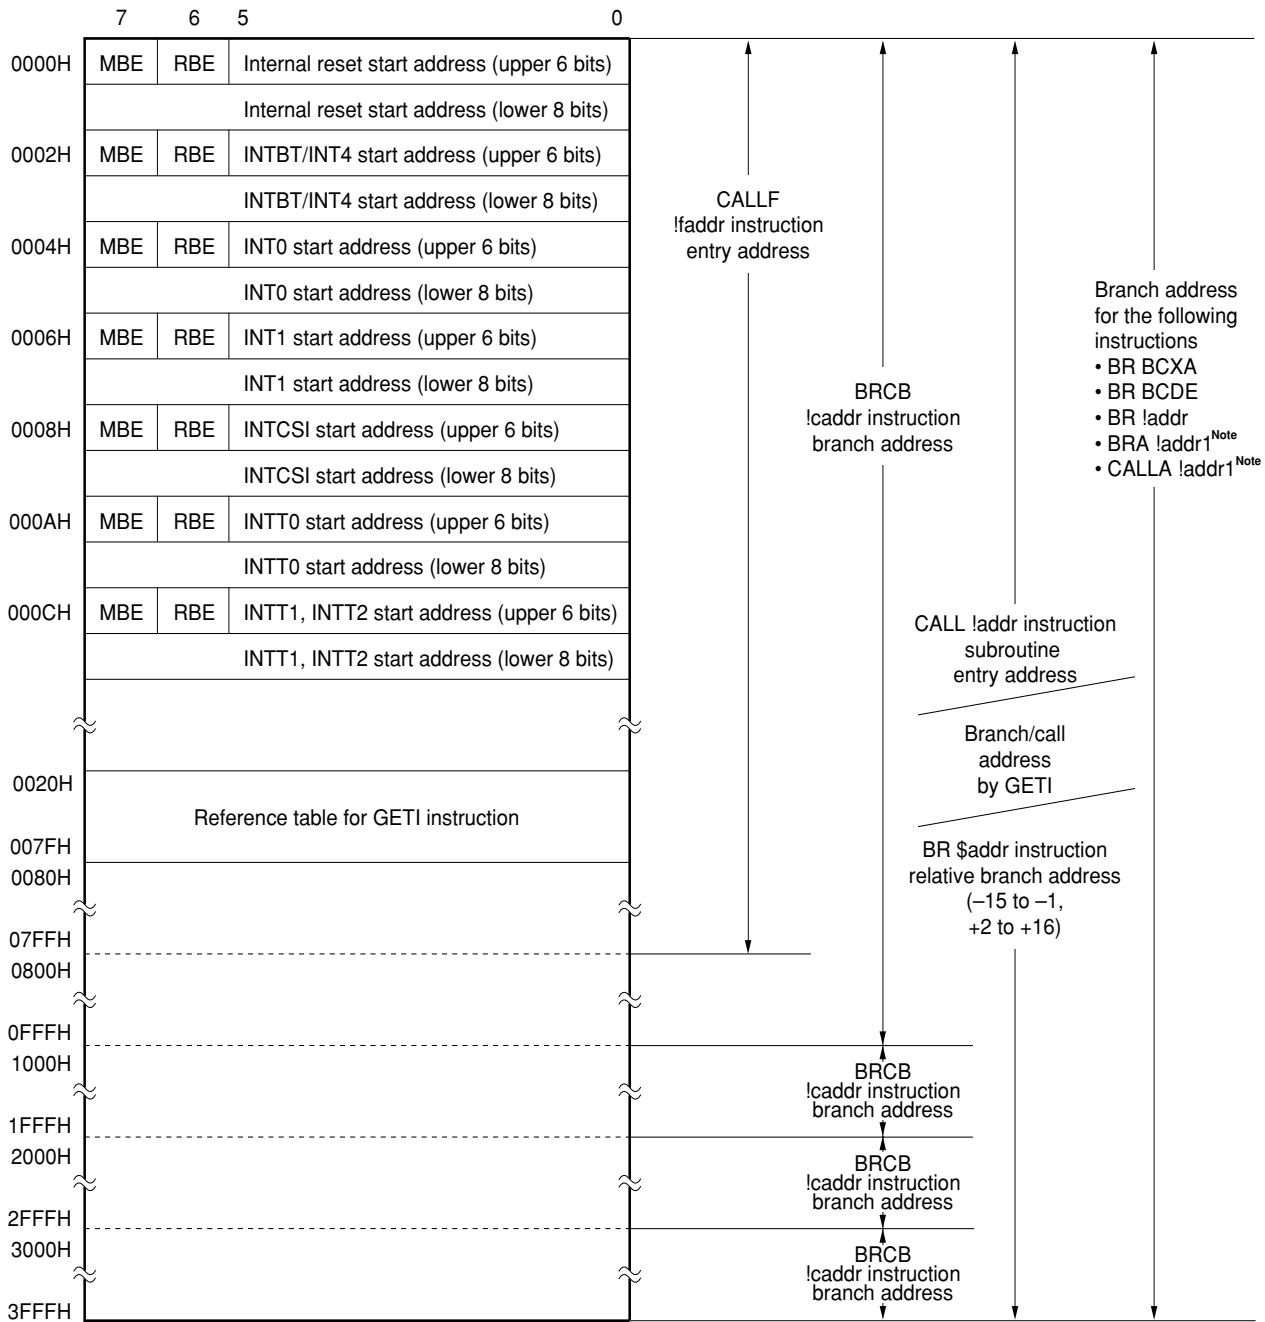

★ **Note**   Can be used only in the Mk II mode.

Remark   For instructions other than those noted above, the BR PCDE and BR PCXA instructions can be used to branch
to addresses with changes in the PC's lower 8 bits only.

6.3 Data Memory (RAM) ... 768 x 4 bits

Figure 6-3 shows the data memory configuration.

Data memory consists of a data area and a peripheral hardware area. The data area consists of 768 x 4-bit static RAM.

Figure 6-3. Data Memory Map
Note   Memory bank 0, 1, or 2 can be selected as the stack area.

7. INSTRUCTION SET

(1) Representation and coding formats for operands

In the instruction's operand area, use the following coding format to describe operands corresponding to the instruction's operand representations (for further description, see the **RA75X Assembler Package User's Manual—Language (EEU-1363)**). When there are several codes, select and use just one. Codes that consist of uppercase letters and + or – symbols are key words that should be entered as they are.

For immediate data, enter an appropriate numerical value or label.

Enter register flag symbols as label descriptors instead of mem, fmem, pmem, bit, etc. (for further description, see the **User's Manual**). The number of labels that can be entered for fmem and pmem are restricted.

Representation	Coding format
reg	X, A, B, C, D, E, H, L
reg1	X, B, C, D, E, H, L
rp	XA, BC, DE, HL
rp1	BC, DE, HL
rp2	BC, DE
rp'	XA, BC, DE, HL, XA', BC', DE', HL'
rp'1	BC, DE, HL, XA', BC', DE', HL'
rpa	HL, HL+, HL–, DE, DL
rpa1	DE, DL
n4	4-bit immediate data or label
n8	8-bit immediate data or label
mem	8-bit immediate data or label[Note]
bit	2-bit immediate data or label
fmem	FB0H-FBFH, FF0H-FFFH immediate data or label
pmem	FC0H-FFFH immediate data or label
addr	0000H-3FFFH immediate data or label
addr1	0000H-3FFFH immediate data or label
caddr	12-bit immediate data or label
faddr	11-bit immediate data or label
taddr	20H-7FH immediate data (however, bit0 = 0) or label
PORTn	PORT0-PORT8
IEXXX	IEBT, IECSI, IET0-IET2, IE0-IE2, IE4, IEW
RBn	RB0-RB3
MBn	MB0-MB2, MB15

Note   When processing 8-bit data, only even-numbered addresses can be entered.

(2) Operation legend

A	: A register; 4-bit accumulator
B	: B register
C	: C register
D	: D register
E	: E register
H	: H register
L	: L register
X	: X register
XA	: Register pair (XA); 8-bit accumulator
BC	: Register pair (BC)
DE	: Register pair (DE)
HL	: Register pair (HL)
XA'	: Expansion register pair (XA')
BC'	: Expansion register pair (BC')
DE'	: Expansion register pair (DE')
HL'	: Expansion register pair (HL')
PC	: Program counter
SP	: Stack pointer
CY	: Carry flag; bit accumulator
PSW	: Program status word
MBE	: Memory bank enable flag
RBE	: Register bank enable flag
PORTn	: Port n (n = 0 to 8)
IME	: Interrupt master enable flag
IPS	: Interrupt priority selection register
IEXXX	: Interrupt enable flag
RBS	: Register bank selection register
MBS	: Memory bank selection register
PCC	: Processor clock control register
.	: Delimiter for address and bit
(XX)	: The contents addressed by XX
XXH	: Hexadecimal data

(3) Description of symbols used in addressing area

*1	MB = MBE • MBS MBS = 0-2, 15	
*2	MB = 0	
*3	MBE = 0 : MB = 0 (000H-07FH) MB = 15 (F80H-FFFH) MBE = 1 : MB = MBS MBS = 0-2, 15	Data memory addressing
*4	MB = 15, fmem = FB0H-FBFH, FF0H-FFFH	
*5	MB = 15, pmem = FC0H-FFFH	
*6	addr = 0000H-3FFFH	
*7	addr, addr1 = (Current PC) −15 to (Current PC) −1 (Current PC) +2 to (Current PC) +16	
*8	caddr = 0000H-0FFFH (PC$_{13, 12}$ = 00B: Mk I or Mk II mode) or 1000H-1FFFH (PC$_{13, 12}$ = 01B: Mk I or Mk II mode) or 2000H-2FFFH (PC$_{13, 12}$ = 10B: Mk I or Mk II mode) or 3000H-3FFFH (PC$_{13, 12}$ = 11B: Mk I or Mk II mode)	Program memory addressing
*9	faddr = 0000H-07FFH	
*10	taddr = 0020H-007FH	
*11	addr1 = 0000H-3FFFH	

Remarks 1. MB indicates access-enabled memory banks.

2. In area *2, MB = 0 for both MBE and MBS.

3. In areas *4 and *5, MB = 15 for both MBE and MBS.

4. Areas *6 to *11 indicate corresponding address-enabled areas.

(4) Description of machine cycles

S indicates the number of machine cycles required for skipping of skip-specified instructions. The value of S varies as shown below.

• No skip .... S = 0
• Skipped instruction is 1-byte or 2-byte instruction .... S = 1
• Skipped instruction is 3-byte instruction[Note] .... S = 2

Note   3-byte instructions: BR !addr, BRA !addr1, CALL !addr, CALLA !addr1

Caution   The GETI instruction is skipped for one machine cycle.

One machine cycle equals one cycle (= t$_{CY}$) of the CPU clock Φ. Use the PCC setting to select among four cycle times.

Instruction group	Mnemonic	Operand	No. of bytes	Machine cycle	Operation	Addressing area	Skip condition
Transfer	MOV	A, #n4	1	1	A<-n4		String-effect A
		reg1, #n4	2	2	reg1<-n4

8. PROM (PROGRAM MEMORY) WRITE AND VERIFY

The μPD75P3036 contains a 16384 x 8-bit PROM as a program memory. The pins listed in the table below are used for this PROM's write/verify operations. Clock input from the X1 pin is used instead of address input as a method for updating addresses.

Pin	Function
V_{PP}	Pin where program voltage is applied during program memory write/verify (usually V_{DD} potential)
X1, X2	Clock input pins for address updating during program memory write/verify. Input the X1 pin's inverted signal to the X2 pin.
MD0 to MD3	Operation mode selection pin for program memory write/verify
D0/P40 to D3/P43 (lower 4 bits) D4/P50 to D7/P53 (upper 4 bits)	8-bit data I/O pins for program memory write/verify
V_{DD}	Pin where power supply voltage is applied. Applies 1.8 to 5.5 V in normal operation mode and +6 V for program memory write/verify.

Caution   Pins not used for program memory write/verify should be connected to V_{SS}.

8.1 Operation Modes for Program Memory Write/Verify

When +6 V is applied to the V_{DD} pin and +12.5 V to the V_{PP} pin, the μPD75P3036 enters the program memory write/verify mode. The following operation modes can be specified by setting pins MD0 to MD3 as shown below.

| Operation mode specification						Operation mode
V_{PP}	V_{DD}	MD0	MD1	MD2	MD3	
+12.5 V	+6 V	H	L	H	L	Zero-clear program memory address
		L	H	H	H	Write mode
		L	L	H	H	Verify mode
		H	X	H	H	Program inhibit mode

X: L or H

★ **8.2 Program Memory Write Procedure**

Program memory can be written at high speed using the following procedure.

    (1)   Pull unused pins to V_{SS} through resistors. Set the X1 pin low.

    (2)   Supply 5 V to the V_{DD} and V_{PP} pins.

    (3)   Wait 10 μs.

    (4)   Select the zero-clear program memory address mode.

    (5)   Supply 6 V to the V_{DD} and 12.5 V to the V_{PP} pins.

    (6)   Write data in the 1 ms write mode.

    (7)   Select the verify mode. If the data is correct, go to step (8) and if not, repeat steps (6) and (7).

    (8)   (X : number of write operations from steps (6) and (7)) x 1 ms additional write.

    (9)   Apply four pulses to the X1 pin to increment the program memory address by one.

    (10) Repeat steps (6) to (9) until the end address is reached.

    (11) Select the zero-clear program memory address mode.

    (12) Return the V_{DD} and V_{PP} pins back to 5 V.

    (13) Turn off the power.

The following figure shows steps (2) to (9).
★   **8.3 Program Memory Read Procedure**

The μPD75P3036 can read program memory contents using the following procedure.

(1)   Pull unused pins to Vss through resistors. Set the X1 pin low.

(2)   Supply 5 V to the VDD and VPP pins.

(3)   Wait 10 μs.

(4)   Select the zero-clear program memory address mode.

(5)   Supply 6 V to the VDD and 12.5 V to the VPP pins.

(6)   Select the verify mode. Apply four clock pulses to the X1 pin. Every four clock pulses will output the data stored in one address.

(7)   Select the zero-clear program memory address mode.

(8)   Return the VDD and VPP pins back to 5 V.

(9)   Turn off the power.

The following figure shows steps (2) to (7).
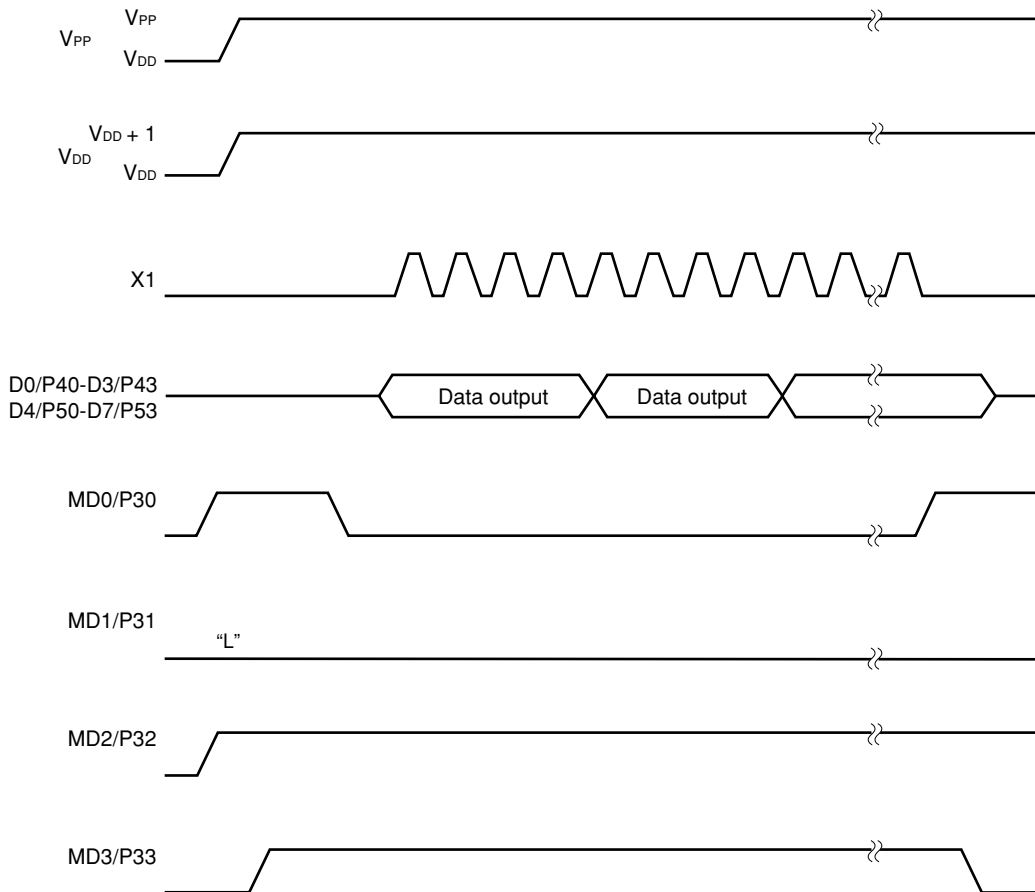

★ **9. PROGRAM ERASURE (μPD75P3036KK-T ONLY)**

The μPD75P3036KK-T is capable of erasing (FFH) the data written in a program memory and rewriting.

To erase the programmed data, expose the erasure window to light having a wavelength shorter than about 400 nm. Normally, irradiate ultraviolet rays of 254-nm wavelength. The amount of exposure required to completely erase the programmed data is as follows:

- UV intensity x erasure time : 15 W• s/cm^2 or more
- Erasure time : 15 to 20 minutes (when a UV lamp of 12000 μW/cm^2 is used. However, a longer time may be needed because of deterioration in performance of the UV lamp, soiled erasure window, etc.)

When erasing the contents of data, set up the UV lamp within 2.5 cm from the erasure window. Further, if a filter is provided for a UV lamp, irrradiate the ultraviolet rays after removing the filter.

★ **10. OPAQUE FILM ON ERASURE WINDOW (μPD75P3036KK-T ONLY)**

To protect from unintentional erasure by rays other than that of the lamp for erasing EPROM contents, and to protect internal circuit other than EPROM from misoperating due to light radiation, cover the erasure window with an opaque film when EPROM contents erasure is not performed.

11. ONE-TIME PROM SCREENING

Due to its structure, the one-time PROM versions (μPD75P3036GC-3B9, μPD75P3036GK-BE9) cannot be fully tested before shipment by NEC Electronics. Therefore, NEC Electronics recommends that after the required data is written and the PROM is stored under the temperature and time conditions shown below, the PROM should be verified via a screening.

Storage temperature	Storage time
125 ˚C	24 hours

★ **12. ELECTRICAL SPECIFICATIONS**

Absolute Maximum Ratings (T$_A$ = 25 °C)

| Parameter	Symbol	Conditions		Ratings	Unit
Supply voltage	V$_{DD}$			−0.3 to +7.0	V
PROM supply voltage	V$_{PP}$			−0.3 to +13.5	V
Input voltage	V$_{I1}$	Other than ports 4, 5		−0.3 to V$_{DD}$ +0.3	V
	V$_{I2}$	Ports 4, 5	N-ch open drain	−0.3 to +14	V
Output voltage	V$_O$			−0.3 to V$_{DD}$ +0.3	V
High-level output current	I$_{OH}$	Per pin		−10	mA
		Total of all pins		−30	mA
Low-level output current	I$_{OL}$	Per pin		30	mA
		Total of all pins		200	mA
Operating ambient temperature	T$_A$			−40 to +85**Note**	˚C
Storage temperature	T$_{stg}$			−65 to +150	˚C

Note   To drive LCD at 1.8 V ≤ V$_{DD}$ < 2.7 V, T$_A$ = −10 to +85 °C

Caution If the absolute maximum ratings of even one of the parameters is exceeded even momentarily, the quality of the product may be degraded. The absolute maximum ratings are therefore values which, when exceeded, can cause the product to be damaged. Be sure that these values are never exceeded when using the product.

Capacitance (T$_A$ = 25 °C, V$_{DD}$ = 0 V)

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Input capacitance	C$_{IN}$	f = 1 MHz			15	pF
Output capacitance	C$_{OUT}$	Unmeasured pins returned to 0 V			15	pF
I/O capacitance	C$_{IO}$				15	pF

Main System Clock Oscillation Circuit Characteristics (T$_A$ = –40 to +85 °C, V$_{DD}$ = 1.8 to 5.5 V)
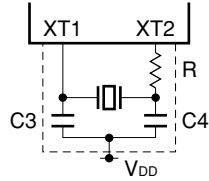

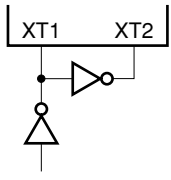

Resonator	Recommended Constants	Parameter	Conditions	MIN.	TYP.	MAX.	Unit
Ceramic resonator		Oscillation frequency (f$_X$)[Note 1]		1.0		6.0[Note 2]	MHz
		Oscillation stabilization time[Note 3]	After V$_{DD}$ has reached MIN. value of oscillation voltage range			4	ms
Crystal resonator		Oscillation frequency (f$_X$)[Note 1]		1.0		6.0[Note 2]	MHz
		Oscillation stabilization time[Note 3]	V$_{DD}$ = 4.5 to 5.5 V			10	ms
						30	
External clock		X1 input frequency (f$_X$)[Note 1]		1.0		6.0[Note 2]	MHz
		X1 input high-, low-level widths (t$_{XH}$, t$_{XL}$)		83.3		500	ns

Notes 1. The oscillation frequency and X1 input frequency shown above indicate characteristics of the oscillation circuit only. For the instruction execution time, refer to AC Characteristics.

2. If the oscillation frequency is 4.19 MHz < f$_X$ ≤ 6.0 MHz at 1.8 V ≤ V$_{DD}$ < 2.7 V, do not select the processor clock control register (PCC) = 0011. If PCC = 0011, one machine cycle time is less than 0.95 μs, falling short of the rated value of 0.95 μs.

3. The oscillation stabilization time is the time required for oscillation to be stabilized after V$_{DD}$ has been applied or STOP mode has been released.

Caution When using the main system clock oscillation circuit, wire the portion enclosed in the dotted line in the above figure as follows to prevent adverse influence due to wiring capacitance:

- **Keep the wiring length as short as possible.**
- **Do not cross the wiring with other signal lines.**
- **Do not route the wiring in the vicinity of a line through which a high alternating current flows.**
- **Always keep the ground point of the capacitor of the oscillation circuit at the same potential as V$_{DD}$.**
- **Do not ground to a power supply pattern through which a high current flows.**
- **Do not extract signals from the oscillation circuit.**

Subsystem Clock Oscillation Circuit Characteristics (T$_A$ = –40 to +85 °C, V$_{DD}$ = 1.8 to 5.5 V)

Resonator	Recommended Constants	Parameter	Conditions	MIN.	TYP.	MAX.	Unit
Crystal resonator		Oscillation frequency (f$_{XT}$)[Note 1]		32	32.768	35	kHz
		Oscillation stabilization time[Note 2]	V$_{DD}$ = 4.5 to 5.5 V		1.0	2	s
						10	
External clock		XT1 input frequency (f$_{XT}$)[Note 1]		32		100	kHz
		XT1 input high-, low-level widths (t$_{XTH}$, t$_{XTL}$)		5		15	μs

Notes 1. The oscillation frequency shown above indicate characteristics of the oscillation circuit only. For the instruction execution time, refer to AC Characteristics.

2. The oscillation stabilization time is the time required for oscillation to be stabilized after V$_{DD}$ has been applied.

Caution When using the subsystem clock oscillation circuit, wire the portion enclosed in the dotted line in the above figure as follows to prevent adverse influence due to wiring capacitance:

- **Keep the wiring length as short as possible.**
- **Do not cross the wiring with other signal lines.**
- **Do not route the wiring in the vicinity of a line through which a high alternating current flows.**
- **Always keep the ground point of the capacitor of the oscillation circuit at the same potential as V$_{DD}$.**
- **Do not ground to a power supply pattern through which a high current flows.**
- **Do not extract signals from the oscillation circuit.**

The subsystem clock oscillation circuit has a low amplification factor to reduce current dissipation and is more susceptible to noise than the main system clock oscillation circuit. Therefore, exercise utmost care in wiring the subsystem clock oscillation circuit.

DC Characteristics (T$_A$ = −40 to +85 °C, V$_{DD}$ = 1.8 to 5.5 V)

Parameter	Symbol	Conditions		MIN.	TYP.	MAX.	Unit
Low-level output current	I$_{OL}$	Per pin				15	mA

	I_{DD2}		HALT mode	V_{DD} = 5.0 V ±10 %		0.9	2.7	mA
				V_{DD} = 3.0 V ±10 %		0.5	1.0	mA
	I_{DD1}	4.19 MHz[Note 4] crystal oscillation C1 = C2 = 22 pF	V_{DD} = 5.0 V ±10 %[Note 5]			2.7	8.1	mA
			V_{DD} = 3.0 V ±10 %[Note 6]			0.33	1.0	mA
	I_{DD2}		HALT mode	V_{DD} = 5.0 V ±10 %		0.7	2.0	mA
				V_{DD} = 3.0 V ±10 %		0.3	0.9	mA
	I_{DD3}	32.768 kHz[Note 7] crystal oscillation	Low-voltage mode[Note 8]	V_{DD} = 3.0 V ±10 %		45	135	μA
				V_{DD} = 2.0 V ±10 %		22	66	μA
				V_{DD} = 3.0 V, T_A = 25 ˚C		45	90	μA
			Low current dissipation mode[Note 9]	V_{DD} = 3.0 V ±10 %		43	129	μA
				V_{DD} = 3.0 V, T_A = 25 ˚C		43	86	μA
	I_{DD4}		HALT mode	Low-voltage mode[Note 8] V_{DD} = 3.0 V ±10 %		8.5	25	μA
				V_{DD} = 2.0 V ±10 %		3.0	9.0	μA
				V_{DD} = 3.0 V, T_A = 25 ˚C		8.5	17	μA
				Low current dissipation mode[Note 9] V_{DD} = 3.0 V ±10 %		4.6	13.8	μA
				V_{DD} = 3.0 V, T_A = 25 ˚C		4.6	9.2	μA
	I_{DD5}	XT1 = 0 V[Note 10] STOP mode	V_{DD} = 5.0 V ±10 %			0.05	10	μA
			V_{DD} = 3.0 V ±10 %			0.02	5.0	μA
				T_A = 25 ˚C		0.02	3.0	μA

Notes 1. Clear VAC0 to 0 in the low current dissipation mode and STOP mode. When VAC0 is set to 1, the current increases by about 1 μA.

2. Voltage deviation is the difference between the ideal values (V_{LCDn}; n = 0, 1, 2) of the segment and common outputs and the output voltage.

3. The current flowing through the internal pull-up resistor is not included.

4. Including the case when the subsystem clock oscillates.

5. When the device operates in high-speed mode with the processor clock control register (PCC) set to 0011.

6. When the device operates in low-speed mode with PCC set to 0000.

7. When the device operates on the subsystem clock, with the system clock control register (SCC) set to 1001 and oscillation of the main system clock stopped.

8. When the sub-oscillation circuit control register (SOS) is set to 0000.

9. When SOS is set to 0010.

10. When SOS is set to 00×1, and the feedback resistor of the sub-oscillation circuit is not used (× : don't care).

AC Characteristics (T$_A$ = –40 to +85 °C, V$_{DD}$ = 1.8 to 5.5 V)

Parameter	Symbol	Conditions		MIN.	TYP.	MAX.	Unit
CPU clock cycle time[Note 1] (minimum instruction execution time = 1 machine cycle)	t$_{CY}$	Operates with main system clock	V$_{DD}$ = 2.7 to 5.5 V	0.67		64	μs
				0.95		64	μs
		Operates with subsystem clock		114	122	125	μs
TI0, TI1, TI2 input frequency	f$_{TI}$	V$_{DD}$ = 2.7 to 5.5 V		0		1.0	MHz
				0		275	kHz
TI0, TI1, TI2 high-, low-level widths	t$_{TIH}$, t$_{TIL}$	V$_{DD}$ = 2.7 to 5.5 V		0.48			μs
				1.8			μs
Interrupt input high-, low-level widths	t$_{INTH}$, t$_{INTL}$	INT0	IM02 = 0	**Note 2**			μs
			IM02 = 1	10			μs
		INT1, 2, 4		10			μs
		KR0 to KR7		10			μs
$\overline{\text{RESET}}$ low-level width	t$_{RSL}$			10			μs

Notes 1. The cycle time of the CPU clock (Φ) is determined by the oscillation frequency of the connected resonator (and external clock), the system clock control register (SCC), and processor clock control register (PCC).
The figure on the right shows the supply voltage V$_{DD}$ vs. cycle time t$_{CY}$ characteristics when the device operates with the main system clock.

   2. 2t$_{CY}$ or 128/f$_X$ depending on the setting of the interrupt mode register (IM0).

t$_{CY}$ vs V$_{DD}$

$\overline{\text{RESET}}$ input timing

t_{RSL}

$\overline{\text{RESET}}$

Data retention characteristics of data memory in STOP mode and at low supply voltage
(T_A = –40 to +85 °C)

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Release signal setup time	t_{SREL}		0			μs
Oscillation stabilization wait time[Note 1]	t_{WAIT}	Released by $\overline{RESET}$		$2^{15}/f_X$		ms
		Released by interrupt request		**Note 2**		ms

Notes 1. The oscillation stabilization wait time is the time during which the CPU stops operating to prevent unstable operation when oscillation is started.
**2.** Set by the basic interval timer mode register (BTM). (Refer to the table below.)

BTM3	BTM2	BTM1	BTM0	Wait Time	
				f_X = 4.19 MHz	f_X = 6.0 MHz
–	0	0	0	$2^{20}/f_X$ (approx. 250 ms)	$2^{20}/f_X$ (approx. 175 ms)
–	0	1	1	$2^{17}/f_X$ (approx. 31.3 ms)	$2^{17}/f_X$ (approx. 21.8 ms)
–	1	0	1	$2^{15}/f_X$ (approx. 7.81 ms)	$2^{15}/f_X$ (approx. 5.46 ms)
–	1	1	1	$2^{13}/f_X$ (approx. 1.95 ms)	$2^{13}/f_X$ (approx. 1.37 ms)

Data retention timing (when STOP mode released by $\overline{RESET}$)
Data retention timing (standby release signal: when STOP mode released by interrupt signal)
DC Programming Characteristics (T$_A$ = 25 ± 5 °C, V$_{DD}$ = 6.0 ± 0.25 V, V$_{PP}$ = 12.5 ± 0.3 V, V$_{SS}$ = 0 V)

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
High-level input voltage	V$_{IH1}$	Except X1, X2	0.7 V$_{DD}$		V$_{DD}$	V
	V$_{IH2}$	X1, X2	V$_{DD}$–0.5		V$_{DD}$	V
Low-level input voltage	V$_{IL1}$	Except X1, X2	0		0.3 V$_{DD}$	V
	V$_{IL2}$	X1, X2	0		0.4	V
Input leakage current	I$_{LI}$	V$_{IN}$ = V$_{IL}$ or V$_{IH}$			10	μA
High-level output voltage	V$_{OH}$	I$_{OH}$ = –1 mA	V$_{DD}$–1.0			V
Low-level output voltage	V$_{OL}$	I$_{OL}$ = 1.6 mA			0.4	V
V$_{DD}$ supply current	I$_{DD}$				30	mA
V$_{PP}$ supply current	I$_{PP}$	MD0 = V$_{IL}$, MD1 = V$_{IH}$			30	mA

Cautions 1.   Ensure that V$_{PP}$ does not exceed +13.5 V including overshoot.

**2.   V$_{DD}$ must be applied before V$_{PP}$, and cut after V$_{PP}$.**

AC Programming Characteristics (T$_A$ = 25 ± 5 °C, V$_{DD}$ = 6.0 ± 0.25 V, V$_{PP}$ = 12.5 ± 0.3 V, V$_{SS}$ = 0 V)

★   **15. RECOMMENDED SOLDERING CONDITIONS**

The *μ*PD75P3036 should be soldered and mounted under the following recommended conditions.
For technical information, see the following website.

Semiconductor Device Mount Manual (http://www.necel.com/pkg/en/mount/index.html)

Table 15-1. Surface Mounting Type Soldering Conditions (1/2)

(1) *μ*PD75P3036GC-3B9: 80-pin plastic QFP (14 × 14 mm)

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature: 235°C, Time: 30 seconds max. (at 210°C or higher), Count: Three times or less	IR35-00-3
VPS	Package peak temperature: 215°C, Time: 40 seconds max. (at 200°C or higher), Count: Three times or less	VP15-00-3
Wave soldering	Solder bath temperature: 260°C max., Time: 10 seconds max., Count: Once Preheating temperature: 120°C max. (package surface temperature)	WS60-00-1
Partial heating	Pin temperature: 350°C max., Time: 3 seconds max. (per pin row)	—

Caution Do not use different soldering methods together (except for partial heating).

Remark   For soldering methods and conditions other than those recommended above, contact an NEC Electronics sales representative.

(2) *μ*PD75P3036GK-BE9: 80-pin plastic TQFP (fine pitch) (12 × 12 mm)

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature: 235°C, Time: 30 seconds max. (at 210°C or higher), Count: Three times or less, Exposure limit: 7 days[Note] (after that, prebake at 125°C for 10 to 72 hours)	IR35-107-3
VPS	Package peak temperature: 215°C, Time: 40 seconds max. (at 200°C or higher), Count: Three times or less, Exposure limit: 7 days[Note] (after that, prebake at 125°C for 10 to 72 hours)	VP15-107-3
Wave soldering	Solder bath temperature: 260°C max., Time: 10 seconds max., Count: Once Preheating temperature: 120°C max. (package surface temperature) Exposure limit: 7 days[Note] (after that, prebake at 125°C for 10 to 72 hours)	WS60-107-1
Partial heating	Pin temperature: 350°C max., Time: 3 seconds max. (per pin row)	—

Note   After opening the dry pack, store it at 25°C or less and 65% RH or less for the allowable storage period.

Caution Do not use different soldering methods together (except for partial heating).

Remark   For soldering methods and conditions other than those recommended above, contact an NEC Electronics sales representative.

Table 15-1. Surface Mounting Type Soldering Conditions (2/2)

★ **(3) μPD75P3036GC-3B9-A: 80-pin plastic QFP (14 × 14 mm)**

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature: 260°C, Time: 60 seconds max. (at 220°C or higher), Count: Three times or less, Exposure limit: 7 days**Note** (after that, prebake at 125°C for 20 to 72 hours)	IR60-207-3
Wave soldering	For details, contact an NEC Electronics sales representative.	—
Partial heating	Pin temperature: 350°C max., Time: 3 seconds max. (per pin row)	—

Note After opening the dry pack, store it at 25°C or less and 65% RH or less for the allowable storage period.

Caution   Do not use different soldering methods together (except for partial heating).

Remarks 1. Products with "-A" at the end of the part number are lead-free products.
2. For soldering methods and conditions other than those recommended above, contact an NEC Electronics sales representative.

★ **(4) μPD75P3036GK-BE9-A: 80-pin plastic TQFP (fine pitch) (12 × 12 mm)**

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature: 260°C, Time: 60 seconds max. (at 220°C or higher), Count: Three times or less, Exposure limit: 7 days**Note** (after that, prebake at 125°C for 10 to 72 hours)	IR60-107-3
Partial heating	Pin temperature: 350°C max., Time: 3 seconds max. (per pin row)	—

Note After opening the dry pack, store it at 25°C or less and 65% RH or less for the allowable storage period.

Caution   Do not use different soldering methods together (except for partial heating).

Remarks 1. Products with "-A" at the end of the part number are lead-free products.
2. For soldering methods and conditions other than those recommended above, contact an NEC Electronics sales representative.

APPENDIX B. DEVELOPMENT TOOLS

The following development tools have been provided for system development using the μPD75P3036. Use the common relocatable assembler for the series together with the device file according to the model.

★

RA75X relocatable assembler	Host machine			Part No. (name)
		OS	Supply medium	
	PC-9800 Series	MS-DOS™	3.5-inch 2HD	μS5A13RA75X
		Ver.3.30 to Ver.6.2**Note**	5-inch 2HD	μS5A10RA75X
	IBM PC/AT™ or compatible	Refer to **"OS for IBM PCs"**	3.5-inch 2HC	μS7B13RA75X
			5-inch 2HC	μS7B10RA75X

★

Device file	Host machine			Part No. (name)
		OS	Supply medium	
	PC-9800 Series	MS-DOS	3.5-inch 2HD	μS5A13DF753036
		Ver.3.30 to Ver.6.2**Note**	5-inch 2HD	μS5A10DF753036
	IBM PC/AT or compatible	Refer to **"OS for IBM PCs"**	3.5-inch 2HC	μS7B13DF753036
			5-inch 2HC	μS7B10DF753036

Note Ver. 5.00 or later includes a task swapping function, but this software is not able to use that function.

Remark Operations of the assembler and device file are guaranteed only when using the host machine and OS described above.

PROM Write Tools

Hardware	PG-1500	This is a PROM programmer that can program single-chip microcontroller with PROM in stand alone mode or under control of host machine when connected with supplied accessory board and optional programmer adapter. It can also program typical PROMs in capacities ranging from 256 K to 4 Mbits.		
	PA-75P328GC	This is a PROM programmer adapter for the µPD75P3036GC used by connecting to a PG-1500.		
	PA-75P336GK	This is a PROM programmer adapter for the µPD75P3036GK used by connecting to a PG-1500.		
	PA-75P3036KK-T**Note 1**	This is a PROM programmer adapter for the µPD75P3036KK-T used by connecting to a PG-1500.		
Software	PG-1500 controller	Connects PG-1500 to host machine with serial and parallel interface and controls PG-1500 on host machine.		
		Host machine		Part No. (name)
			OS	Supply medium	
		PC-9800 Series	MS-DOS Ver.3.30 to Ver.6.2**Note 2**	3.5-inch 2HD	µS5A13PG1500
				5-inch 2HD	µS5A10PG1500
		IBM PC/AT or compatible	Refer to "**OS for IBM PCs**"	3.5-inch 2HD	µS7B13PG1500
				5-inch 2HC	µS7B10PG1500

Notes 1. Under development
2. Ver. 5.00 or later includes a task swapping function, but this software is not able to use that function.

Remark Operation of the PG-1500 controller is guaranteed only when using the host machine and OS described above.

Debugging Tools

In-circuit emulators (IE-75000-R and IE-75001-R) are provided as program debugging tools for the μPD75P3036.
Various system configurations using these in-circuit emulators are listed below.

Hardware	IE-75000-R[Note 1]	The IE-75000-R is an in-circuit emulator to be used for hardware and software debugging during development of application systems using the 75X or 75XL Series products. For development of the μPD75P3036, the IE-75000-R is used with optional emulation board (IE-75300-R-EM) and emulation probe (EP-753036GC-R or EP-753036GK-R). Highly efficient debugging can be performed when connected to host machine and PROM programmer. The IE-75000-R includes a connected emulation board (IE-75000-R-EM).
	IE-75001-R	The IE-75001-R is an in-circuit emulator to be used for hardware and software debugging during development of application systems using the 75X or 75XL Series products. The IE-75001-R is used with optional emulation board (IE-75300-R-EM) and emulation probe (EP-753036GC-R or EP-753036GK-R). Highly efficient debugging can be performed when connected to host machine and PROM programmer.
	IE-75300-R-EM[Note 2]	This is an emulation board for evaluating application systems using the μPD75P3036. It is used in combination with the IE-75000-R or IE-75001-R.
	EP-75336GC-R	This is an emulation probe for the μPD75P3036GC. When being used, it is connected with the IE-75000-R or IE-75001-R and the IE-75300-R-EM.
	EV-9200GC-80	It includes an 80-pin conversion socket (EV-9200GC-80) to facilitate connections with target system.
	EP-75336GK-R	This is an emulation probe for the μPD75P3036GK. When being used, it is connected with the IE-75000-R or IE-75001-R and the IE-75300-R-EM.
	EV-9500GK-80	It includes an 80-pin conversion adapter (EV-9500GK-80) to facilitate connections with target system.
Software	IE control program	This program can control the IE-75000-R or IE-75001-R on a host machine when connected to the IE-75000-R or IE-75001-R via an RS-232-C and Centronics interface.

Host machine			Part No. (name)
	OS	Supply medium	
PC-9800 Series	MS-DOS	3.5-inch 2HD	μS5A13IE75X
	Ver.3.30 to Ver.6.2[Note 3]	5-inch 2HD	μS5A10IE75X
IBM PC/AT or compatible	Refer to **"OS for IBM PCs"**	3.5-inch 2HC	μS7B13IE75X
		5-inch 2HC	μS7B10IE75X

Notes 1. This is a maintenance product.
    2. The IE-75300-R-EM is sold separately.
    3. Ver. 5.00 or later includes a task swapping function, but this software is not able to use that function.

Remarks 1. Operation of the IE control program is guaranteed only when using the host machine and OS described above.
    2. The μPD753036 and 75P3036 are commonly referred to as the μPD753036 Subseries.

OS for IBM PCs

The following operating systems for the IBM PC are supported.

★

★

OS	Version
PC DOS™	Ver.5.02 to Ver.6.3 J6.1/V to J6.3/V
MS-DOS	Ver.5.0 to Ver.6.22 5.0/V to 6.2/V
IBM DOS™	J5.02/V

Caution   Ver. 5.0 or later includes a task swapping function, but this software is not able to use that function.

Microcomputer – Related Product Guide – Third Party Products –	MEI-604	—

Caution   The related documents listed above are subject to change without notice. Be sure to use the latest documents for designing, etc.

── NOTES FOR CMOS DEVICES ──

① **VOLTAGE APPLICATION WAVEFORM AT INPUT PIN**

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (MAX) and V_{IH} (MIN) due to noise, etc., the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (MAX) and V_{IH} (MIN).

② **HANDLING OF UNUSED INPUT PINS**

Unconnected CMOS device inputs can be cause of malfunction. If an input pin is unconnected, it is possible that an internal input level may be generated due to noise, etc., causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND via a resistor if there is a possibility that it will be an output pin. All handling related to unused pins must be judged separately for each device and according to related specifications governing the device.

③ **PRECAUTION AGAINST ESD**

A strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it when it has occurred. Environmental control must be adequate. When it is dry, a humidifier should be used. It is recommended to avoid using insulators that easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors should be grounded. The operator should be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with mounted semiconductor devices.

④ **STATUS BEFORE INITIALIZATION**

Power-on does not necessarily define the initial status of a MOS device. Immediately after the power source is turned ON, devices with reset functions have not yet been initialized. Hence, power-on does not guarantee output pin levels, I/O settings or contents of registers. A device is not initialized until the reset signal is received. A reset operation must be executed immediately after power-on for devices with reset functions.

⑤ **POWER ON/OFF SEQUENCE**

In the case of a device that uses different power supplies for the internal operation and external interface, as a rule, switch on the external power supply after switching on the internal power supply. When switching the power supply off, as a rule, switch off the external power supply and then the internal power supply. Use of the reverse power on/off sequences may result in the application of an overvoltage to the internal elements of the device, causing malfunction and degradation of internal elements due to the passage of an abnormal current.

The correct power on/off sequence must be judged separately for each device and according to related specifications governing the device.

⑥ **INPUT OF SIGNAL DURING POWER OFF STATE**

Do not input signals or an I/O pull-up power supply while the device is not powered. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements.

Input of signals during the power off state must be judged separately for each device and according to related specifications governing the device.

Regional Information

Some information contained in this document may vary from country to country. Before using any NEC Electronics product in your application, please contact the NEC Electronics office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability

- Ordering information

- Product release schedule

- Availability of related technical literature

- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)

- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

- **The information in this document is current as of August, 2005. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC Electronics data sheets or data books, etc., for the most up-to-date specifications of NEC Electronics products. Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.**

- No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Electronics. NEC Electronics assumes no responsibility for any errors that may appear in this document.

- NEC Electronics does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC Electronics products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Electronics or others.

- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of a customer's equipment shall be done under the full responsibility of the customer. NEC Electronics assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.

- While NEC Electronics endeavors to enhance the quality, reliability and safety of NEC Electronics products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC Electronics products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment and anti-failure features.

- NEC Electronics products are classified into the following three quality grades: "Standard", "Special" and "Specific".

  The "Specific" quality grade applies only to NEC Electronics products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of an NEC Electronics product depend on its quality grade, as indicated below. Customers must check the quality grade of each NEC Electronics product before using it in a particular application.

    "Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots.

    "Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support).

    "Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

The quality grade of NEC Electronics products is "Standard" unless otherwise expressly specified in NEC Electronics data sheets or data books, etc. If customers wish to use NEC Electronics products in applications not intended by NEC Electronics, they must contact an NEC Electronics sales representative in advance to determine NEC Electronics' willingness to support a given application.

(Note)

(1) "NEC Electronics" as used in this statement means NEC Electronics Corporation and also includes its majority-owned subsidiaries.

(2) "NEC Electronics products" means any product developed or manufactured by or for NEC Electronics (as defined above).
