

General Description

The AAT4610 SmartSwitch is a current limited P-channel MOSFET power switch designed for high-side load switching applications. This switch operates with inputs ranging from 2.7V to 5.5V, making it ideal for both 3V and 5V systems. An integrated current-limiting circuit protects the input supply against large currents which may cause the supply to fall out of regulation. The AAT4610 is also protected from thermal overload which limits power dissipation and junction temperatures. It can be used to control loads that require up to 1A. Current limit threshold is programmed with a resistor from SET to ground. The quiescent supply current is typically a low 15µA max. In shutdown mode, the supply current decreases to less than 1µA.

The AAT4610 is available in a Pb-free 5-pin SOT23 package and is specified over the -40°C to +85°C temperature range.

Features

- Input Voltage Range: 2.7V to 5.5V
- Programmable Over-Current Threshold
- Fast Transient Response:
 - <1µs Response to Short Circuit
- Low Quiescent Current
 - 15µA Typical
 - 1µA Max with Switch Off
- 160mΩ Typical $R_{DS(ON)}$
- Only 2.5V Needed for ON/OFF Control
- Under-Voltage Lockout
- Thermal Shutdown
- 4kV ESD Rating
- UL Approved—File No. E217765
- 5-Pin SOT23 Package
- Temperature Range: -40°C to +85°C

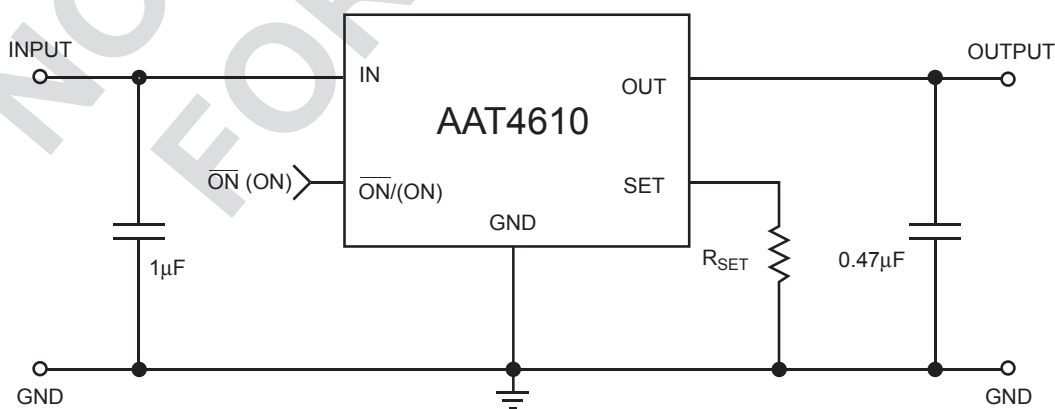

Applications

- Hot Swap Supplies
- Notebook Computers
- Peripheral Ports
- Personal Communication Devices

UL Recognized Component

Typical Application

Pin Descriptions

| Pin # | Symbol | Function |
|-------|------------------------|---|
| 1 | OUT | P-channel MOSFET drain. Connect 0.47 μ F capacitor from OUT to GND. |
| 2 | GND | Ground connection |
| 3 | SET | Current limit set input. A resistor from SET to ground sets the current limit for the switch. |
| 4 | $\overline{\text{ON}}$ | Enable input. Two versions are available, active-high and active-low. See Ordering Information for details. |
| 5 | IN | P-channel MOSFET source. Connect 1 μ F capacitor from IN to GND. |

Pin Configuration

Absolute Maximum Ratings¹

$T_A = 25^\circ\text{C}$, unless otherwise noted.

| Symbol | Description | Value | Units |
|--------------------|--|------------------------|------------------|
| V_{IN} | IN to GND | -0.3 to 6 | V |
| V_{ON} | ON (ON) to GND | -0.3 to $V_{IN} + 0.3$ | V |
| V_{SET}, V_{OUT} | SET, OUT to GND | -0.3 to $V_{IN} + 0.3$ | V |
| I_{MAX} | Maximum Continuous Switch Current | 2 | A |
| T_J | Operating Junction Temperature Range | -40 to 150 | $^\circ\text{C}$ |
| T_{LEAD} | Maximum Soldering Temperature (at leads) | 300 | $^\circ\text{C}$ |
| V_{ESD} | ESD Rating ² - HBM | 4000 | V |

Thermal Characteristics³

| Symbol | Description | Value | Units |
|---------------|--------------------|-------|---------------------------|
| Θ_{JA} | Thermal Resistance | 150 | $^\circ\text{C}/\text{W}$ |
| P_D | Power Dissipation | 667 | mW |

1. Stresses above those listed in Absolute Maximum Ratings may cause permanent damage to the device. Functional operation at conditions other than the operating conditions specified is not implied. Only one Absolute Maximum Rating should be applied at any one time.
2. Human body model is a 100pF capacitor discharged through a 1.5k Ω resistor into each pin.
3. Mounted on a demo board.

Electrical Characteristics

$V_{IN} = 5V$, $T_A = -40^{\circ}C$ to $+85^{\circ}C$, unless otherwise noted. Typical values are at $T_A = 25^{\circ}C$.

| Symbol | Description | Conditions | Min | Typ | Max | Units |
|----------------|---|--|------------------|------|------|-------------|
| V_{IN} | Operation Voltage | | 2.7 | | 5.5 | V |
| I_Q | Quiescent Current | $V_{IN} = 5V$, ON (\overline{ON}) = Active, $I_{OUT} = 0$ | | 15 | 30 | μA |
| $I_{Q(OFF)}$ | Off Supply Current | ON (\overline{ON}) = Inactive, $V_{IN} = 5.5V$ | | | 1 | μA |
| $I_{SD(OFF)}$ | Off Switch Current | ON (\overline{ON}) = Inactive, $V_{IN} = 5.5V$, $V_{OUT} = 0$ | | 0.03 | 15 | μA |
| V_{UVLO} | Under-Voltage Lockout | Rising Edge, 1% Hysteresis | 2.0 | 2.3 | 2.7 | V |
| $R_{DS(ON)}$ | On Resistance | $V_{IN} = 5.0V$ | | 160 | 180 | m Ω |
| | | $V_{IN} = 4.5V$ | | 165 | | |
| | | $V_{IN} = 3.0V$ | | 195 | 230 | |
| I_{LIM} | Current Limit | $R_{SET} = 6.8k\Omega$ | 0.75 | 1 | 1.25 | A |
| $I_{LIM(MIN)}$ | Minimum Current Limit | | | 150 | | mA |
| $V_{ON(L)}$ | ON (\overline{ON}) Input Low Voltage | | | | 0.8 | V |
| $V_{ON(H)}$ | ON (\overline{ON}) Input High Voltage | $V_{IN} = 2.7V$ to $3.6V$ | 2.0 | | | V |
| | | $V_{IN} = 4.5V$ to $5.5V$ | 2.4 | | | |
| $I_{ON(SINK)}$ | ON (\overline{ON}) Input leakage | $V_{ON} = 5.5V$ | | 0.01 | 1 | μA |
| T_{RESP} | Current Limit Response Time | $V_{IN} = 5V$ | | 0.8 | | μs |
| T_{OFF} | Turn-Off Time | $V_{IN} = 5V$, $R_L = 10\Omega$ | | 0.4 | 2 | μs |
| T_{ON} | Turn-On Time | $V_{IN} = 5V$, $R_L = 10\Omega$ | | 40 | 200 | μs |
| T_{SD} | Over-Temperature Threshold | $V_{IN} = 5V$ | T_J Increasing | | 125 | $^{\circ}C$ |
| | | | T_J Decreasing | | 115 | |

Typical Characteristics

Unless otherwise noted, $V_{IN} = 5V$, $T_A = 25^\circ C$.

Applications Information

Setting Current Limit

In most applications, the variation in I_{LIM} must be taken into account when determining R_{SET} . The I_{LIM} variation is due to processing variations from part to part, as well as variations in the voltages at IN (Pin 5) and OUT (Pin 1), plus the operating temperature. See the charts "Current Limit vs. Temperature" and "Output Current vs. V_{OUT} " in the Typical Characteristics section of this datasheet. Together, these three factors add up to a $\pm 25\%$ tolerance (see I_{LIM} specification in the Electrical Characteristics section of this datasheet). Figure 1 shows a cold device with a statistically higher current limit, and a hot device with a statistically lower current limit, both with R_{SET} equal to 10.5k Ω . While the chart, " R_{SET} vs. I_{LIM} " indicates an I_{LIM} of 0.7A with an R_{SET} of 10.5k Ω , this figure shows that the actual current limit will be at least 0.525A, and no greater than 0.880A.

Figure 1: Output Current Using 10.5k Ω .

To determine R_{SET} , start with the maximum current drawn by the load, and multiply it by 1.33 (typical $I_{LIM} = \text{minimum } I_{LIM} / 0.75$). This is the typical current limit value. Next, refer to " R_{SET} vs. I_{LIM} " and find the R_{SET} that corresponds to the typical current limit value. Choose the largest resistor available that is less than or equal to it. For greater precision,

the value of R_{SET} may also be calculated using the $I_{LIM} R_{SET}$ product found in the chart "R_{SET} Coefficient vs. I_{LIM}". The maximum current is derived by multiplying the typical current for the chosen R_{SET} in the chart by 1.25. A few standard resistor values are listed in Table 1.

| R _{SET} (kΩ) | Current Limit Typ (mA) | Device Will Not Current Limit Below (mA) | Device Always Current Limits Below (mA) |
|-----------------------|------------------------|--|---|
| 40.2 | 200 | 150 | 250 |
| 30.9 | 250 | 188 | 313 |
| 24.9 | 300 | 225 | 375 |
| 22.1 | 350 | 263 | 438 |
| 19.6 | 400 | 300 | 500 |
| 17.8 | 450 | 338 | 563 |
| 16.2 | 500 | 375 | 625 |
| 14.7 | 550 | 413 | 688 |
| 13.0 | 600 | 450 | 750 |
| 10.5 | 700 | 525 | 875 |
| 8.87 | 800 | 600 | 1000 |
| 7.50 | 900 | 675 | 1125 |
| 6.81 | 1000 | 750 | 1250 |
| 6.04 | 1100 | 825 | 1375 |
| 5.49 | 1200 | 900 | 1500 |
| 4.99 | 1300 | 975 | 1625 |
| 4.64 | 1400 | 1050 | 1750 |

Table 1: Current Limit R_{SET} Values.

Example: A USB port requires 0.5A. 0.5A multiplied by 1.33 is 0.665A. From the chart "R_{SET} vs. I_{LIM}," R_{SET} should be less than 11kΩ. 10.5 kΩ is a standard value that is a little less than 11kΩ. The chart gives approx-

imately 0.700A as a typical I_{LIM} value for 10.5kΩ. Multiplying 0.700A by 0.75 and 1.25 shows that the AAT4610 will limit the load current to greater than 0.525A but less than 0.875A.

Operation in Current Limit

When a heavy load is applied to the output of the AAT4610, the load current is limited to the value of I_{LIM} determined by R_{SET} (see Figure 2). Since the load is demanding more current than I_{LIM}, the voltage at the output drops. This causes the AAT4610 to dissipate a larger than normal quantity of power, and results in increased die temperature. When the die temperature exceeds an over-temperature limit, the AAT4610 will shut down until it has cooled sufficiently, at which point it will start up again. The AAT4610 will continue to cycle on and off until the load is removed, power is removed, or until a logic high level is applied to ON (Pin 4).

Enable Input

In many systems, power planes are controlled by integrated circuits which run at lower voltages than the power plane itself. The enable input ON (Pin 4) of the AAT4610 has low and high threshold voltages that accommodate this condition. The threshold voltages are compatible with 5V TTL and 2.5V to 5V CMOS.

Reverse Voltage

The AAT4610 is designed to control current flowing from IN to OUT. If a voltage is applied to OUT which is greater than the voltage on IN, large currents may flow. This could damage the AAT4610.

Figure 2: Overload Operation.

Ordering Information

| Package | Enable | Marking ¹ | Part Number (Tape and Reel) ² |
|---------|-------------------------------------|----------------------|--|
| SOT23-5 | $\overline{\text{ON}}$ (active low) | AAXYY | AAT4610IGV-T1 |
| SOT23-5 | ON (active high) | AWXYY | AAT4610IGV-1-T1 |

All AnalogicTech products are offered in Pb-free packaging. The term “Pb-free” means semiconductor products that are in compliance with current RoHS standards, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. For more information, please visit our website at <http://www.analogictech.com/pbfree>.

Package Information

SOT23-5

All dimensions in millimeters

1. XYY = assembly and date code.
2. Sample stock is generally held on all part numbers listed in **BOLD**.
