4194304-BIT (524288-WORD BY 8-BIT) CMOS STATIC RAM

DESCRIPTION

The M5M5408B is a family of 4-Mbit static RAMs organized as 524,288-words by 8-bit, fabricated by Mitsubishi's high-performance 0.25 μ m CMOS technology.

The M5M5408B is suitable for memory applications where a simple interfacing, battery operating and battery backup are the important design objectives.

M5M5408B is packaged in 32-pin plastic SOP and 32-pin plastic TSOP packages. Two types of TSOPs are available, M5M5408BTP (normal-lead-bend TSOP) and M5M5408BRT (reverse-lead-bend TSOP). These two types TSOPs are suitable for a surface mounting on double-sided printed circuit boards.

From the point of operating temperature, the family is divided into three versions; "Standard", "W-version", and "I-version". Those are summarized in the part name table below.

Note 5: If \overline{W} goes low simultaneously with or prior to \overline{S} , the output remains in the high impedance state.

Note 6: Don't apply inverted phase signal externally when DQ pin is in output mode.
