

FEATURES

- Single Supply Operation
 - Input Voltage Range Extends to Ground
 - Output Swings to Ground while Sinking Current
- Pin Compatible to 1458 and 324 with Precision Specs
- *Guaranteed* Offset Voltage 150 μ V Max.
- *Guaranteed* Low Drift 2 μ V/ $^{\circ}$ C Max.
- *Guaranteed* Offset Current 0.8nA Max.
- *Guaranteed* High Gain
 - 5mA Load Current 1.5 Million Min.
 - 17mA Load Current 0.8 Million Min.
- *Guaranteed* Low Supply Current 500 μ A Max.
- Low Voltage Noise, 0.1Hz to 10Hz 0.55 μ Vp-p
- Low Current Noise—Better than OP-07, 0.07pA/ \sqrt Hz

APPLICATIONS

- Battery-Powered Precision Instrumentation
 - Strain Gauge Signal Conditioners
 - Thermocouple Amplifiers
 - Instrumentation Amplifiers
- 4mA–20mA Current Loop Transmitters
- Multiple Limit Threshold Detection
- Active Filters
- Multiple Gain Blocks

 LTC and LT are registered trademarks of Linear Technology Corporation.

DESCRIPTION

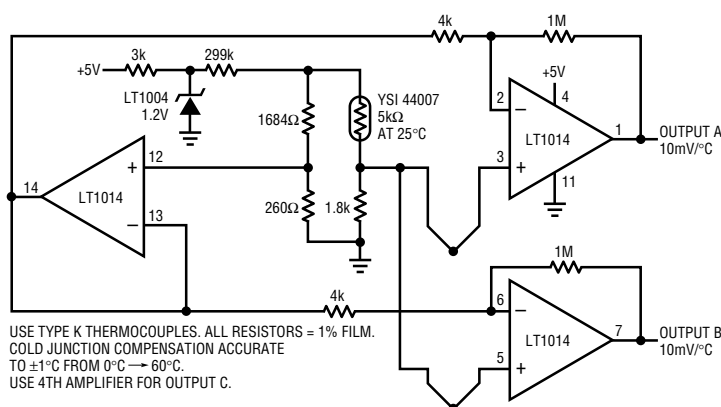

The LT[®]1014 is the first precision quad operational amplifier which directly upgrades designs in the industry standard 14-pin DIP LM324/LM348/OP-11/4156 pin configuration. It is no longer necessary to compromise specifications, while saving board space and cost, as compared to single operational amplifiers.

The LT1014's low offset voltage of 50 μ V, drift of 0.3 μ V/ $^{\circ}$ C, offset current of 0.15nA, gain of 8 million, common-mode rejection of 117dB and power supply rejection of 120dB qualify it as four truly precision operational amplifiers. Particularly important is the low offset voltage, since no offset null terminals are provided in the quad configuration. Although supply current is only 350 μ A per amplifier, a new output stage design sources and sinks in excess of 20mA of load current, while retaining high voltage gain.

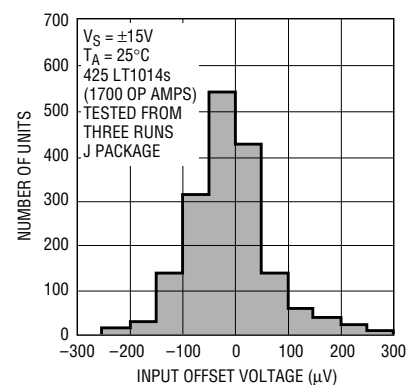

Similarly, the LT1013 is the first precision dual op amp in the 8-pin industry standard configuration, upgrading the performance of such popular devices as the MC1458/1558, LM158 and OP-221. The LT1013's specifications are similar to (even somewhat better than) the LT1014's.

Both the LT1013 and LT1014 can be operated off a single 5V power supply: input common-mode range includes ground; the output can also swing to within a few millivolts of ground. Crossover distortion, so apparent on previous single-supply designs, is eliminated. A full set of specifications is provided with \pm 15V and single 5V supplies.

APPLICATIONS INFORMATION

Single Supply Operation

The LT1013/1014 are fully specified for single supply operation, i.e., when the negative supply is 0V. Input common-mode range includes ground; the output swings within a few millivolts of ground. Single supply operation, however, can create special difficulties, both at the input and at the output. The LT1013/LT1014 have specific circuitry which addresses these problems.

At the input, the driving signal can fall below 0V— inadvertently or on a transient basis. If the input is more than

a few hundred millivolts below ground, two distinct problems can occur on previous single supply designs, such as the LM124, LM158, OP-20, OP-21, OP-220, OP-221, OP-420:

- a) When the input is more than a diode drop below ground, unlimited current will flow from the substrate (V^- terminal) to the input. This can destroy the unit. On the LT1013/1014, the 400Ω resistors, in series with the input (see schematic diagram), protect the devices even when the input is 5V below ground.

APPLICATIONS INFORMATION

(b) When the input is more than 400mV below ground (at 25°C), the input stage saturates (transistors Q3 and Q4) and phase reversal occurs at the output. This can cause lock-up in servo systems. Due to a unique phase reversal protection circuitry (Q21, Q22, Q27, Q28), the LT1013/1014's outputs do not reverse, as illustrated below, even when the inputs are at -1.5V.

There is one circumstance, however, under which the phase reversal protection circuitry does not function: when the other op amp on the LT1013, or one specific amplifier of the other three on the LT1014, is driven hard into negative saturation at the output.

- A when D's output is in negative saturation. B's and C's outputs have no effect.
- B when C's output is in negative saturation. A's and D's outputs have no effect.
- C when B's output is in negative saturation. A's and D's outputs have no effect.
- D when A's output is in negative saturation. B's and C's outputs have no effect.

At the output, the aforementioned single supply designs either cannot swing to within 600mV of ground (OP-20) or cannot sink more than a few microamperes while swinging to ground (LM124, LM158). The LT1013/1014's all-NPN output stage maintains its low output resistance and high gain characteristics until the output is saturated.

In dual supply operations, the output stage is crossover distortion-free.

Comparator Applications

The single supply operation of the LT1013/1014 lends itself to its use as a precision comparator with TTL compatible output:

In systems using both op amps and comparators, the LT1013/1014 can perform multiple duties; for example, on the LT1014, two of the devices can be used as op amps and the other two as comparators.

Voltage Follower with Input Exceeding the Negative Common-Mode Range

Comparator Fall Response Time to 10mV, 5mV, 2mV Overdrives

$V_S = 5V, 0V$ 50µs/DIV

APPLICATIONS INFORMATION

Low Supply Operation

The minimum supply voltage for proper operation of the LT1013/1014 is 3.4V (three Ni-Cad batteries). Typical supply current at this voltage is 290µA, therefore power dissipation is only one milliwatt per amplifier.

Noise Testing

For applications information on noise testing and calculations, please see the LT1007 or LT1008 data sheet.

Test Circuit for Offset Voltage and Offset Drift with Temperature

* RESISTOR MUST HAVE LOW THERMOELECTRIC POTENTIAL.
 ** THIS CIRCUIT IS ALSO USED AS THE BURN-IN CONFIGURATION, WITH SUPPLY VOLTAGES INCREASED TO ±20V.
 $V_0 = 1000V_{0S}$

TYPICAL APPLICATIONS

50MHz Thermal rms to DC Converter

2% ACCURACY, DC-50MHz.
 100:1 CREST FACTOR CAPABILITY.
 * 0.1% RESISTOR.
 T1-T2 = YELLOW SPRINGS INST. CO. THERMISTOR COMPOSITE #44018.
 ENCLOSE T1 AND T2 IN STYROFOAM.
 7.5mW DISSIPATION.

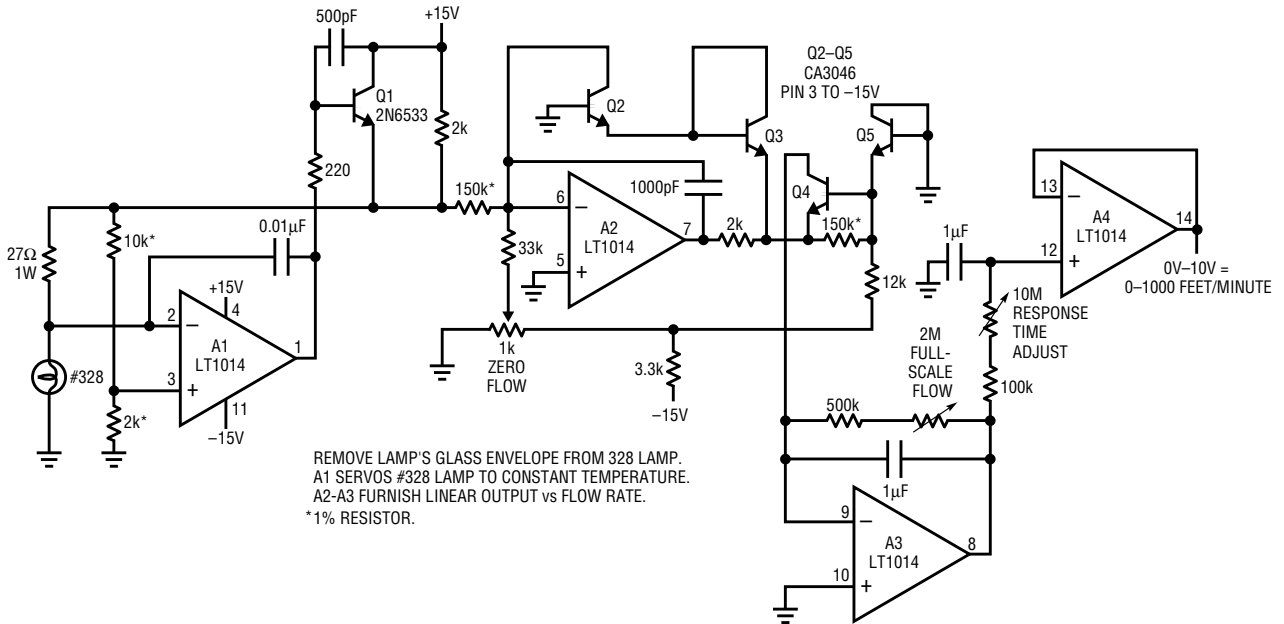

5V Single Supply Dual Instrumentation Amplifier

OFFSET = 150µV
 GAIN = $\frac{R_2}{R_1} + 1$.
 CMRR = 120dB.
 COMMON-MODE RANGE IS 0V TO 5V.

TYPICAL APPLICATIONS

Hot Wire Anemometer

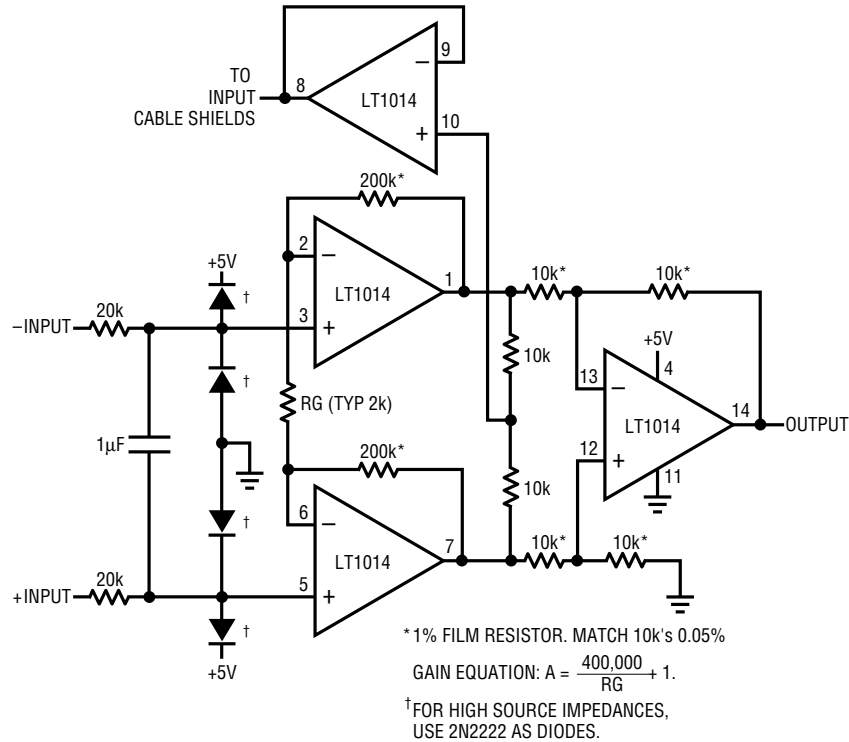

Liquid Flowmeter

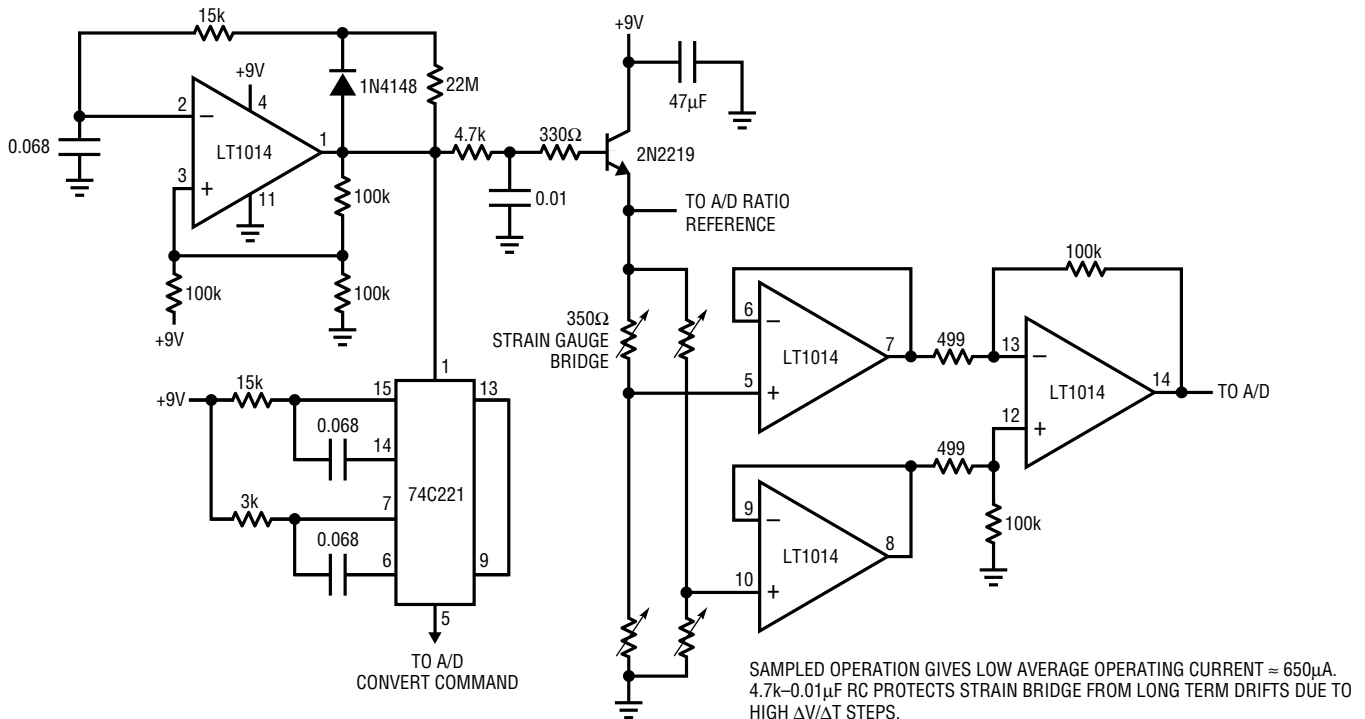

* 1% FILM RESISTOR.
 ** SUPPLIED WITH YSI THERMISTOR NETWORK. T1, T2 YSI THERMISTOR NETWORK = #44201. FLOW IN PIPE IS INVERSELY PROPORTIONAL TO RESISTANCE OF T1-T2 TEMPERATURE DIFFERENCE. A1-A2 PROVIDE GAIN. A3-A4 PROVIDE LINEARIZED FREQUENCY OUTPUT.

TYPICAL APPLICATIONS

5V Powered Precision Instrumentation Amplifier

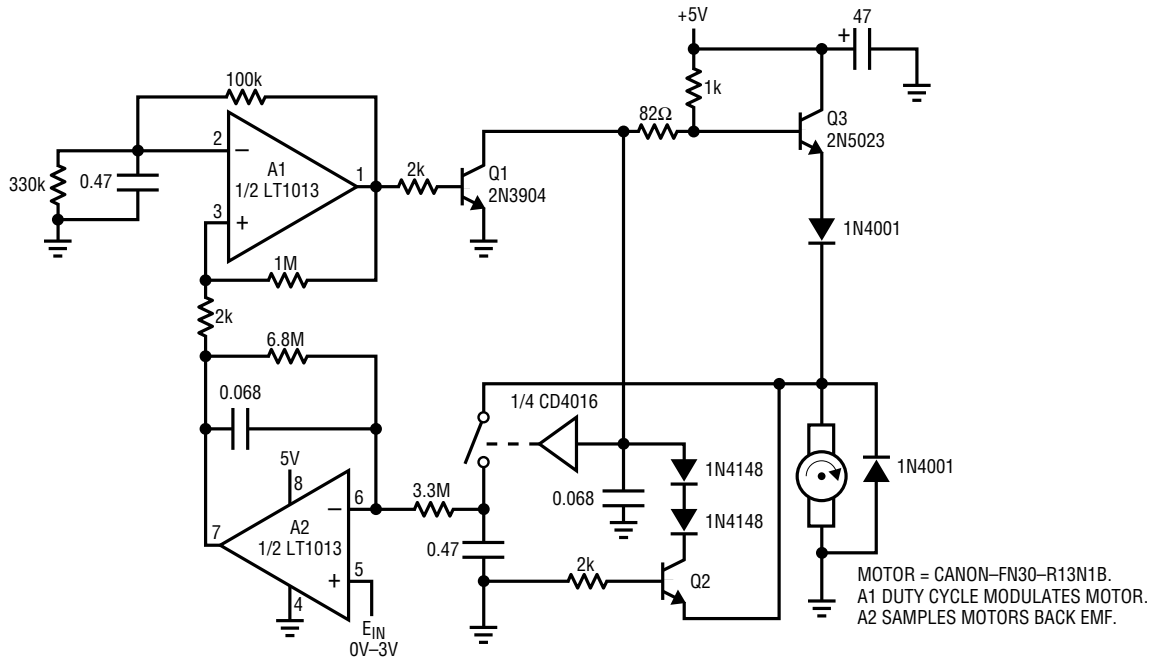

9V Battery Powered Strain Gauge Signal Conditioner

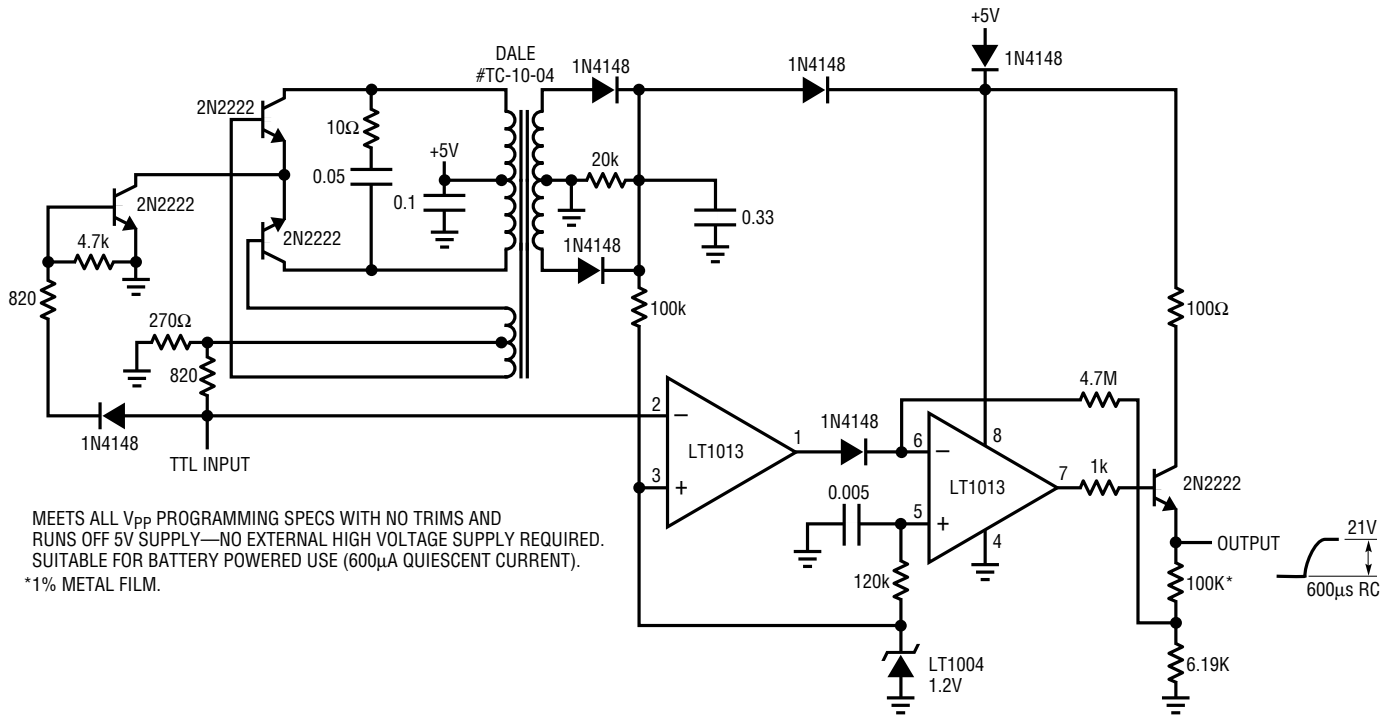

TYPICAL APPLICATIONS

5V Powered Motor Speed Controller
No Tachometer Required

5V Powered EEPROM Pulse Generator

TYPICAL APPLICATIONS

Methane Concentration Detector with Linearized Output

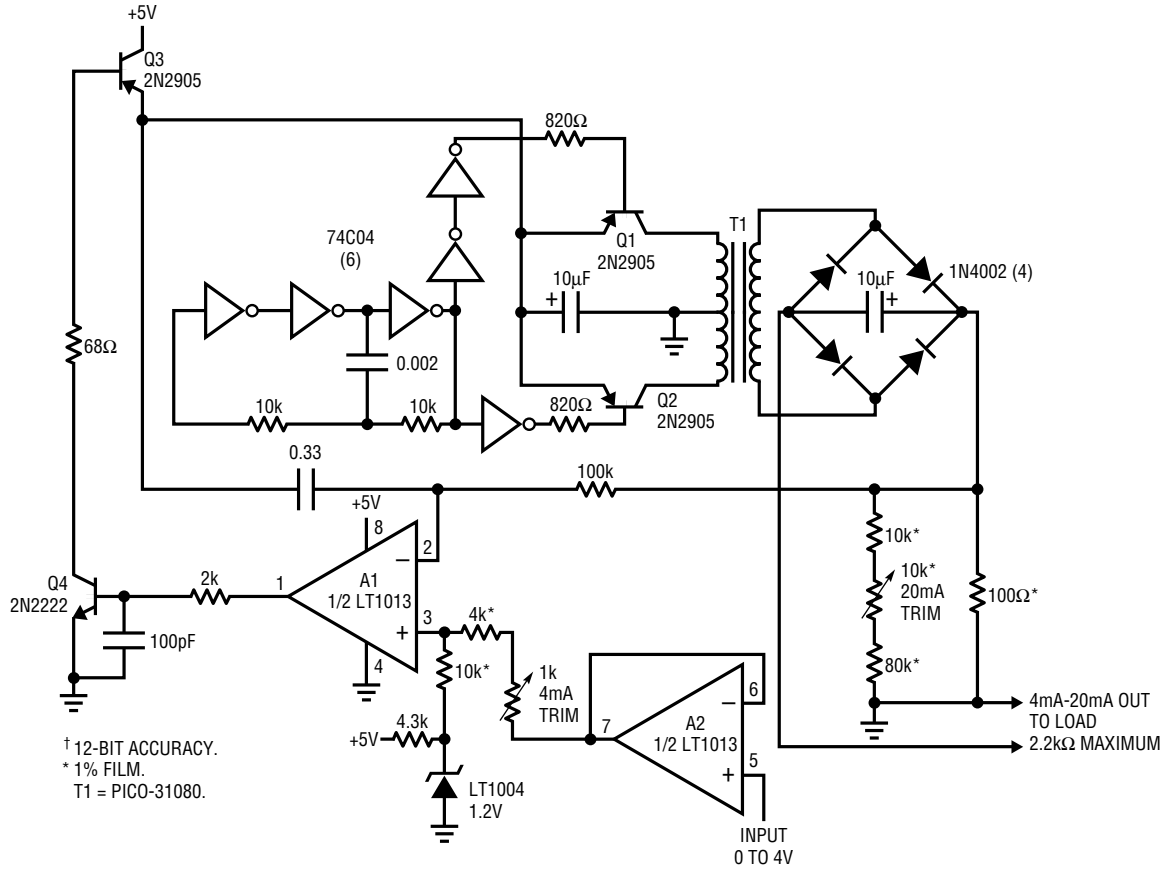

Low Power 9V to 5V Converter

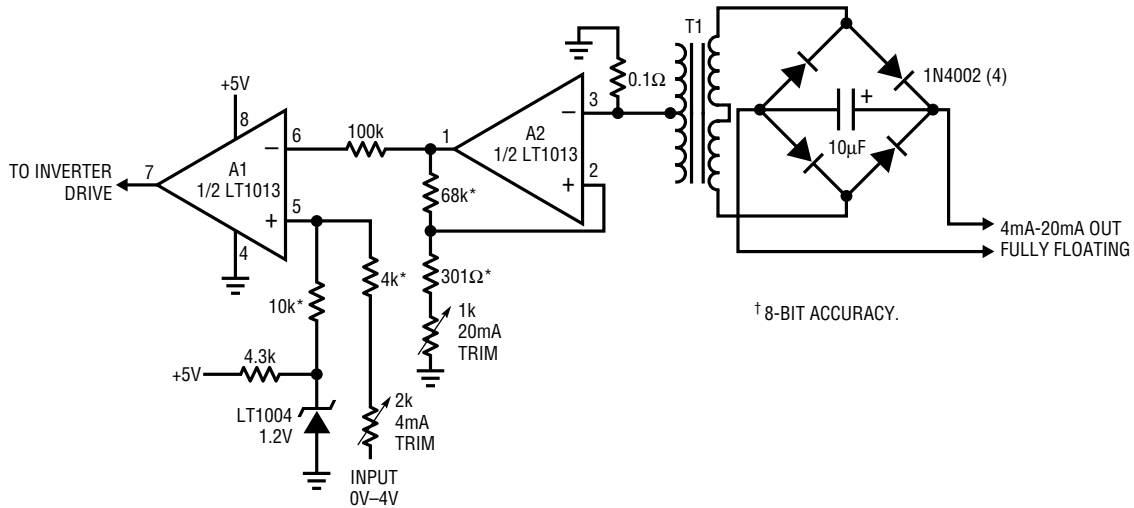

L = DALE TE-3/Q3/TA.
 SHORT CIRCUIT CURRENT = 30mA.
 ≈ 75% EFFICIENCY.
 SWITCHING PREREGULATOR CONTROLS DROP ACROSS FET TO 200mV.

TYPICAL APPLICATIONS

5V Powered 4mA-20mA Current Loop Transmitter†

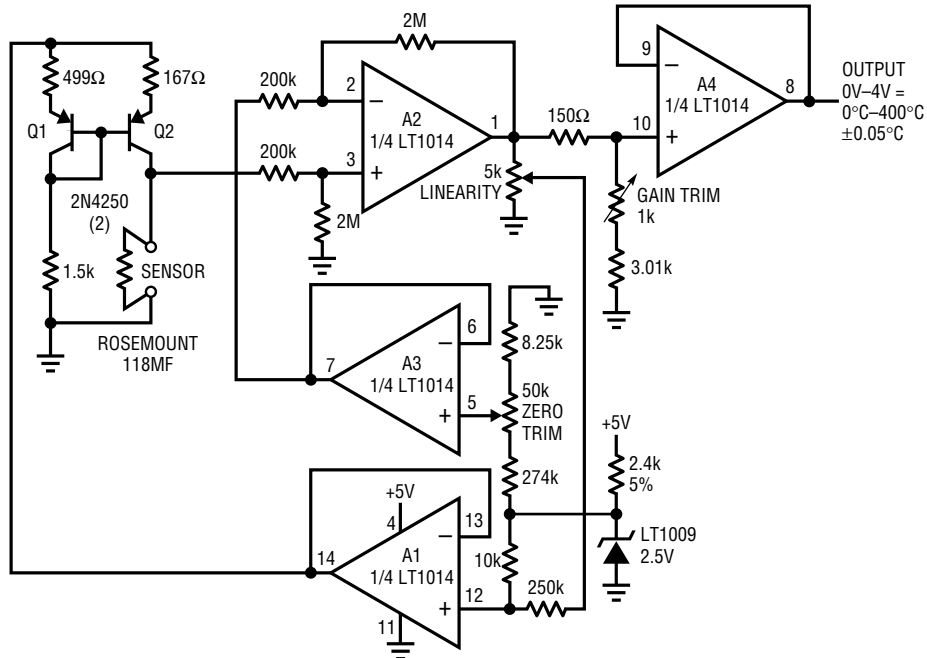

Fully Floating Modification to 4mA-20mA Current Loop†

TYPICAL APPLICATIONS

5V Powered, Linearized Platinum RTD Signal Conditioner

ALL RESISTORS ARE TRW-MAR-6 METAL FILM.
 RATIO MATCH 2M-200K ± 0.01%.
 TRIM SEQUENCE:
 SET SENSOR TO 0 ° VALUE.
 ADJUST ZERO FOR 0V OUT.
 SET SENSOR TO 100 °C VALUE.
 ADJUST GAIN FOR 1.000V OUT.
 SET SENSOR TO 400 °C.
 ADJUST LINEARITY FOR 4.000V OUT, REPEAT AS REQUIRED.

Strain Gauge Bridge Signal Conditioner

* 1% FILM RESISTOR.
 PRESSURE TRANSDUCER-BLH/DHF-350.
 CIRCLED LETTER IS PIN NUMBER.

TYPICAL APPLICATIONS

Triple Op Amp Instrumentation Amplifier with Bias Current Cancellation

TYPICAL APPLICATIONS

Low Dropout Regulator for 6V Battery

Voltage Controlled Current Source with Ground Referred Input and Output

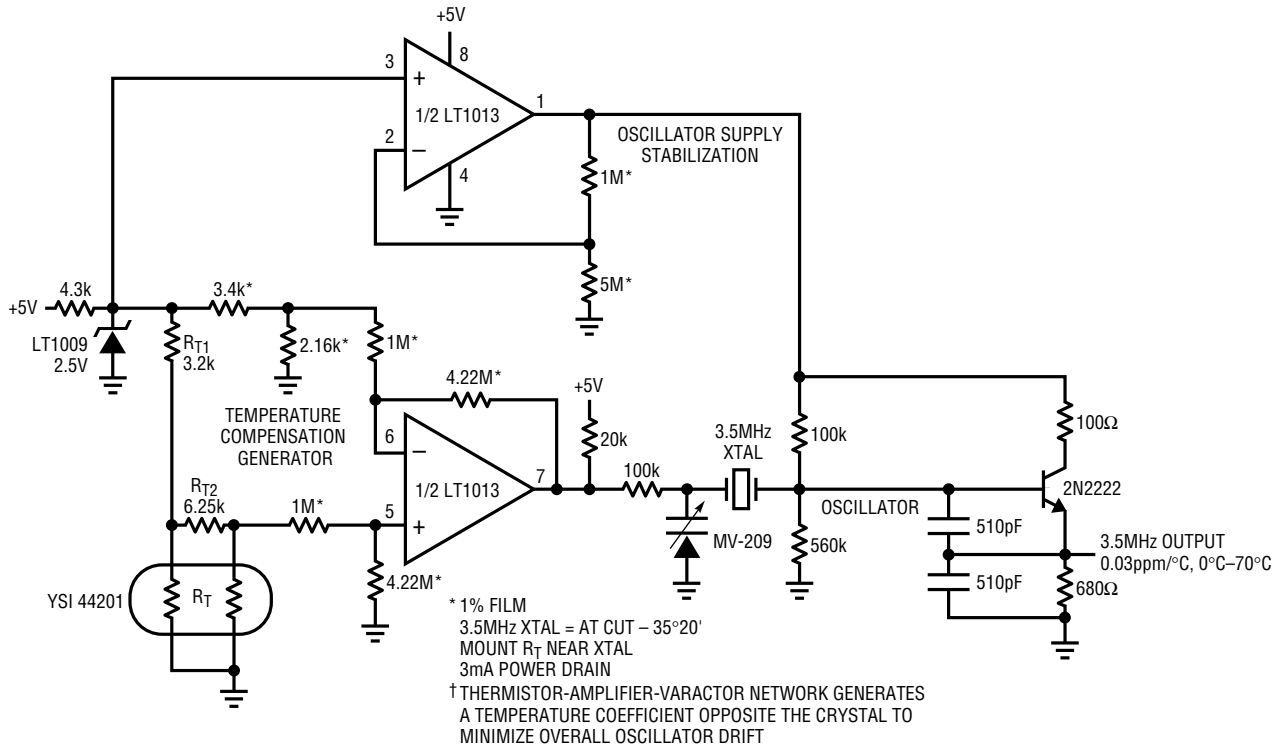

6V to ±15V Regulating Converter

TYPICAL APPLICATIONS

Low Power, 5V Driven, Temperature Compensated Crystal Oscillator (TXCO)[†]

Step-Up Switching Regulator for 6V Battery

LT = AIE-VERNITRON 24-104
