

MM74C00 • MM74C02 • MM74C04

Quad 2-Input NAND Gate • Quad 2-Input NOR Gate • Hex Inverter

General Description

The MM74C00, MM74C02, and MM74C04 logic gates employ complementary MOS (CMOS) to achieve wide power supply operating range, low power consumption, high noise immunity and symmetric controlled rise and fall times. With features such as this the 74C logic family is close to ideal for use in digital systems. Function and pin out compatibility with series 74 devices minimizes design time for those designers already familiar with the standard 74 logic family.

All inputs are protected from damage due to static discharge by diode clamps to V_{CC} and GND.

- Wide supply voltage range: 3V to 15V
- Guaranteed noise margin: 1V
- High noise immunity: $0.45 V_{CC}$ (typ.)
