Inverting • Non-Inverting Octal Buffer and Line Driver with 3-STATE Outputs

General Description

The MM74C240 and MM74C244 octal buffers and line drivers are monolithic complementary MOS (CMOS) integrated circuits with 3-STATE outputs. These outputs have been specially designed to drive highly capacitive loads such as bus-oriented systems. These devices have a fan out of 6 low power Schottky loads. A high logic level on the output disable control input G makes the outputs go into the high impedance state.
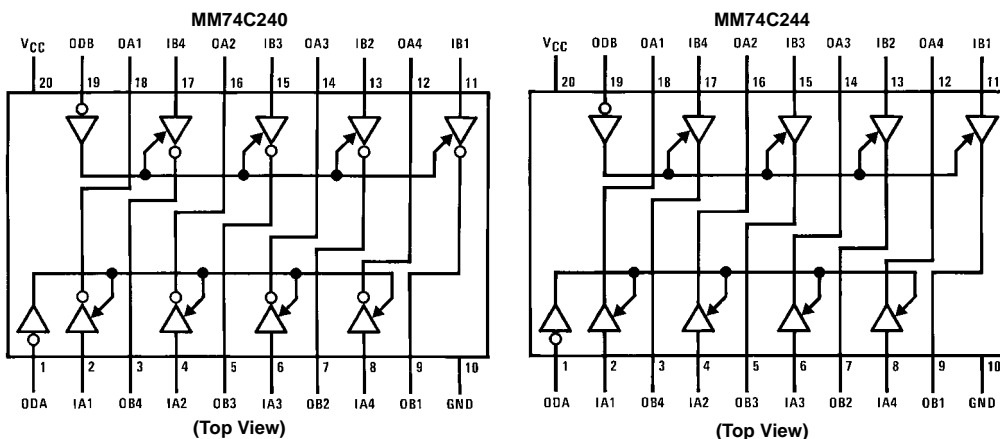

Features

■ Wide supply voltage range (3V to 15V)
■ High noise immunity (0.45 V_{CC} typ)
■ Low power consumption
■ High capacitive load drive capability
■ 3-STATE outputs
■ Input protection
■ TTL compatibility
■ 20-pin dual-in-line package
■ High speed 25 ns (typ.) @ 10V, 50 pF (MM74C244)
