

Dual Independent Differential Amp for Low Power Applications from DC to 120MHz

The CA3054 consists of two independent differential amplifiers with associated constant current transistors on a common monolithic substrate. The six NPN transistors which comprise the amplifiers are general purpose devices which exhibit low 1/f noise and a value of f_T in excess of 300MHz. These feature make the CA3054 useful from DC to 120MHz. Bias and load resistors have been omitted to provide maximum application flexibility.

The monolithic construction of the CA3054 provides close electrical and thermal matching of the amplifiers. This feature makes these devices particularly useful in dual channel applications where matched performance of the two channels is required.

Ordering Information

PART NUMBER (BRAND)	TEMP. RANGE (°C)	PACKAGE	PKG. DWG. #
CA3054M96 (3054)	0 to 85	14 Ld SOIC Tape and Reel	M14.15
CA3054MZ (CA3054MZ)	0 to 85	14 Ld SOIC (Pb-free)	M14.15
CA3054MZ96 (CA3054MZ)	0 to 85	14 Ld SOIC Tape and Reel (Pb-free)	M14.15

NOTE: Intersil Pb-free plus anneal products employ special Pb-free material sets; molding compounds/die attach materials and 100% matte tin plate termination finish, which are RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.

Features

- Two Differential Amplifiers on a Common Substrate
- Independently Accessible Inputs and Outputs
- Maximum Input Offset Voltage $\pm 5mV$
- Temperature Range 0°C to 85°C
- Pb-Free Plus Anneal Available (RoHS Compliant)

Applications

- Dual Sense Amplifiers
- Dual Schmitt Triggers
- Multifunction Combinations
 - RF/Mixer/Oscillator; Converter/IF
- IF Amplifiers (Differential and/or Cascode)
- Product Detectors
- Doubly Balanced Modulators and Demodulators
- Balanced Quadrature Detectors
- Cascade Limiters
- Synchronous Detectors
- Pairs of Balanced Mixers
- Synthesizer Mixers
- Balanced (Push-Pull) Cascode Amplifiers

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

- The collector of each transistor of the CA3054 is isolated from the substrate by an integral diode. The substrate must be connected to a voltage which is more negative than any collector voltage in order to maintain isolation between transistors and provide for normal transistor action. The substrate should be maintained at signal (AC) ground by means of a suitable grounding capacitor, to avoid undesired coupling between transistors.
- θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

Maximum Voltage Ratings

The following chart gives the range of voltages which can be applied to the terminals listed vertically with respect to the terminals listed horizontally. For example, the voltage range of the vertical Terminal 2 with respect to Terminal 4 is +15V to -5V.
