# 74F175 Quad D-Type Flip-Flop

#### **General Description**

The 74F175 is a high-speed quad D-type flip-flop. The device is useful for general flip-flop requirements where clock and clear inputs are common. The information on the D inputs is stored during the LOW-to-HIGH clock transition. Both true and complemented outputs of each flip-flop are provided. A Master Reset input resets all flip-flops, independent of the Clock or D inputs, LOW.

#### **Features**

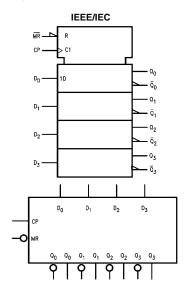

- Edge-triggered D-type inputs
- Buffered positive edge-triggered clock
- Asynchronous common reset
- True and complement output

### **Ordering Code:**

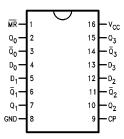

| Order Number | Package Number | Package Description   |
|--------------|----------------|---|
| 74F175SC     | M16A           | 16-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150 Narrow |
| 74F175SJ     | M16D           | 16-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide               |
| 74F175PC     | N16E           | 16-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300 Wide       |

Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

#### **Functional Description**

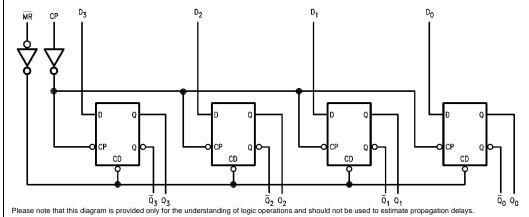

The 74F175 consists of four edge-triggered D-type flipflops with individual D inputs and Q and  $\overline{Q}$  outputs. The Clock and Master Reset are common. The four flip-flops will store the state of their individual D inputs on the LOW-to-HIGH clock (CP) transition, causing individual Q and  $\overline{Q}$  outputs to follow. A LOW input on the Master Reset ( $\overline{MR}$ ) will force all Q outputs LOW and  $\overline{Q}$  outputs HIGH independent of Clock or Data inputs. The 74F175 is useful for general logic applications where a common Master Reset and Clock are acceptable.

#### **Truth Table**

|       | Inputs | Outputs        |                |                                      |  |
|-------|--------|----------------|----------------|--------------------------------------|--|
| MR CP |        | D <sub>n</sub> | Q <sub>n</sub> | $\overline{\mathbf{Q}}_{\mathbf{n}}$ |  |
| L     | Х      | Х              | L              | Н                                    |  |

L = LOW Voltage Level

X = Immaterial

<sup>✓ =</sup> LOW-to-HIGH Clock Transition

### **Absolute Maximum Ratings**(Note 1)

-65°C to +150°C Storage Temperature -55°C to +125°C Ambient Temperature under Bias

Junction Temperature under Bias -55°C to +150°C V<sub>CC</sub> Pin Potential to Ground Pin -0.5V to +7.0V

Input Voltage (Note 2) -0.5V to +7.0VInput Current (Note 2) -30 mA to +5.0 mA

Voltage Applied to Output

in HIGH State (with  $V_{CC} = 0V$ )

Standard Output -0.5V to  $V_{CC}$ 3-STATE Output -0.5V to +5.5V

Current Applied to Output

in LOW State (Max) twice the rated I<sub>OL</sub> (mA)

#### **Recommended Operating Conditions**

0°C to +70°C Free Air Ambient Temperature Supply Voltage +4.5V to +5.5V

Note 1: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

Note 2: Either voltage limit or current limit is sufficient to protect inputs.

#### **DC Electrical Characteristics**

#### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
