

Precision Wide Bandwidth Analog Switches

Features

- Single-Supply Operation (+2V to +6V)
- Rail-to-Rail Analog Signal Dynamic Range
- Low On-Resistance (6Ω typ with 5V supply)
Minimizes Distortion and Error Voltages
- On-Resistance Matching Channels, 0.8Ω typ
- On-Resistance Flatness, 3Ω typ
- Low Charge Injection Reduces Glitch Errors. Q = 4pC typ
- Replaces Mechanical Relays
- High Speed. $t_{ON} = 10\text{ns}$ typ
- Low Off-Isolation: -72dB @ 1MHz
- Wide -3dB Bandwidth: 170 MHz
- High-Current Channel Capability: >100mA
- TTL/CMOS Logic Compatible
- Low Power Consumption (0.5μW typ)
- Pin-compatible with DG41X, MAX31X

Applications

- Audio, Video Switching and Routing
- Battery-Powered Communication Systems
- Computer Peripherals
- Telecommunications
- Portable Instrumentation

Description

The PI5A317A/381A/319A are analog switches designed for single-supply operation. These high-precision device is ideal for low-distortion audio, video, signal switching and routing.

The PI5A317A is a single-pole single-throw (SPST), normally closed (NC) switch. The PI5A318A has the same pinout but is a single-pole, single-throw (SPST, normally open (NO) function. The PI5A319A is a single-pole, double-throw (SPDT) switch

Each switch conducts current equally well in either direction when on. When off, they block voltages up to V_{CC} .

The PI5A317A/381A/319A are fully specified with +5V and +3.3V supplies. With +5V, they guarantee 10Ω on-resistance. On-resistance matching between channels is within 2Ω. On-resistance flatness is less than 5Ω over the specified range. This switch family also guarantees fast switching speeds ($t_{ON} < 20\text{ns}</math>).$

These products are available in a 8-pin narrow body SOIC, and PDIP packages for operation over the industrial (-40°C to +85 °C) temperature range.

Maximum Ratings

(Above which the useful life may be impaired. For user guidelines, not tested.)

Storage Temperature	-65°C to +150°C
Ambient Temperature with Power Applied	-40°C to +85°C
Supply Voltage to Ground Potential (Inputs & Vcc Only)	-0.5V to +7.0V
Supply Voltage to Ground Potential (Outputs & D/O Only)	-0.5V to +7.0V
DC Input Voltage	-0.5V to Vcc+0.5V
DC Output Current	120 mA
Power Dissipation	0.5W

Note:

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
