

Quad, 3.5MHz, Operational Amplifier

HA-4741, which contains four amplifiers on a monolithic chip, provides a new measure of performance for general purpose operational amplifiers. Each amplifier in the HA-4741 has operating specifications that equal or exceed those of the 741-type amplifier in all categories of performance.

HA-4741 is well suited to applications requiring accurate signal processing by virtue of its low values of input offset voltage (0.5mV), input bias current (60nA) and input voltage noise (9nV/√Hz at 1kHz). 3.5MHz bandwidth, coupled with high open-loop gain, allow the HA-4741 to be used in designs requiring amplification of wide band signals, such as audio amplifiers. Audio application is further enhanced by the HA-4741's negligible output crossover distortion.

These excellent dynamic characteristics also make the HA-4741 ideal for a wide range of active filter designs. Performance integrity of multi-channel designs is assured by a high level of amplifier-to-amplifier isolation (69dB at 10kHz).

A wide range of supply voltages (±2V to ±20V) can be used to power the HA-4741, making it compatible with almost any system including battery-powered equipment.

HA-4741/883 product and data sheets available upon request.

Ordering Information

PART NUMBER	TEMP. RANGE (°C)	PACKAGE	PKG. NO.
HA1-4741-2	-55 to 125	14 Ld CERDIP	F14.3
HA1-4741-5	0 to 75	14 Ld CERDIP	F14.3
HA3-4741-5	0 to 75	14 Ld PDIP	E14.3
HA9P4741-9	-40 to 85	16 Ld SOIC	M16.3

Features

- Slew Rate 1.6V/μs
- Bandwidth 3.5MHz
- Input Voltage Noise 9nV/√Hz
- Input Offset Voltage 0.5mV
- Input Bias Current 60nA
- Supply Range ±2V to ±20V
- No Crossover Distortion
- Standard Quad Pinout

Applications

- Universal Active Filters
- D3 Communications Filters
- Audio Amplifiers
- Battery-Powered Equipment

Pinouts

HA-4741

Absolute Maximum Ratings

$T_A = 25^\circ\text{C}$ Unless Otherwise Stated

Supply Voltage Between V+ and V- Terminals	40V
Differential Input Voltage	30V
Input Voltage	V_{SUPPLY}
Output Short Circuit Duration (Note 3)	Indefinite

Operating Conditions

Temperature Range:

HA-4741-2	-55°C to 125°C
HA-4741-5	0°C to 75°C
HA-4741-9	-40°C to 85°C

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

- Maximum power dissipation, including output load, must be designed to maintain junction temperature below 175°C for the ceramic package, and below 150°C for the plastic packages.
- θ_{JA} is measured with the component mounted on an evaluation PC board in free air.
- One amplifier may be shorted to ground indefinitely.

Thermal Information

Thermal Resistance (Typical, Note 2)	θ_{JA} ($^\circ\text{C}/\text{W}$)	θ_{JC} ($^\circ\text{C}/\text{W}$)
CERDIP Package	90	35
PDIP Package	107	N/A
SOIC Package	96	N/A
Maximum Junction Temperature (Ceramic Package, Note 1)	175°C	
Maximum Junction Temperature (Plastic Packages, Note 1)	150°C	
Maximum Storage Temperature	-65°C to 150°C	
Maximum Lead Temperature (Soldering 10s)	300°C	
(SOIC - Lead Tips Only)		

Electrical Specifications $V_{\text{SUPPLY}} = \pm 15\text{V}$, Unless Otherwise Specified
