# GaAs Plastic Infrared Emitting Diodes

## Types OP160SL, OP160SLD, OP160SLC, OP160SLB, OP160SLA

### Features

- Selected to specific on-line intensity ranges
- Low cost, miniature, plastic end-locking T-1 package
- Mechanically and spectrally matched to the OP500-OP500SL series phototransistors and the OP530 photodarlington

### Description

The OP160SL series devices are gallium arsenide infrared emitting diodes mounted in clear plastic end-locking packages. The OP160SL series allows a broad range of intensity selection. The narrow radiation pattern provides high on-axis intensity for excellent coupling efficiency with an OP500 or OP500SL series T-1 phototransistor. For additional information on spectral emission characteristics, please refer to the OP500 data sheet.

### Absolute Maximum Ratings (T<sub>A</sub> = 25°C unless otherwise noted)

Reverse Voltage	2.0 V
Continuous Forward Current	.50 mA
Peak Forward Current (Pulse Width = 1 μsec., 300 pps)	3.0 A
Storage and Operating Temperature Range	-40°C to +100°C
Lead Soldering Temperature (1/16 inch (1.6 mm) from case for 5 sec. with soldering iron) <sup>(1)</sup>	240°C
Power Dissipation	100 mW <sup>(2)</sup>

### Notes:

- RMA flux is recommended. Duration can be extended to 10 seconds max. when flow soldering.
- Derate linearly 1.33 mW/°C above 25°C.
- E<sub>a</sub>(APT) is a measurement of the average apertured radiant incidence upon a sensing area 0.081" (2.06 mm) in diameter perpendicular to and centered on the mechanical axis of the lens, and 0.590" (14.99 mm) from the measurement surface. E<sub>a</sub>(APT) is not necessarily uniform within the measured area.

### Typical Performance Curves

Percent Changes in Radiant Intensity vs Time

Coupling Characteristics of OP160SL and OP500

Types OP160SL, OP160SLD, OP160SLC, OP160SLB, OP160SLA
