MITSUBISHI SEMICONDUCTOR < Dual-In-Line Package Intelligent Power Module>

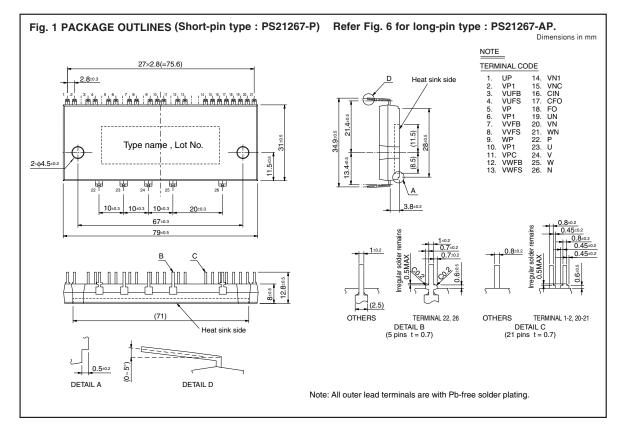

# PS21267-P/AP

TRANSFER-MOLD TYPE INSULATED TYPE

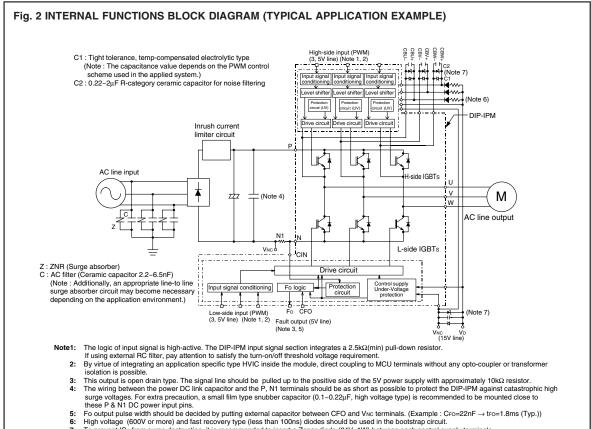

### APPLICATION

AC100V~200V three-phase inverter drive for small power motor control.

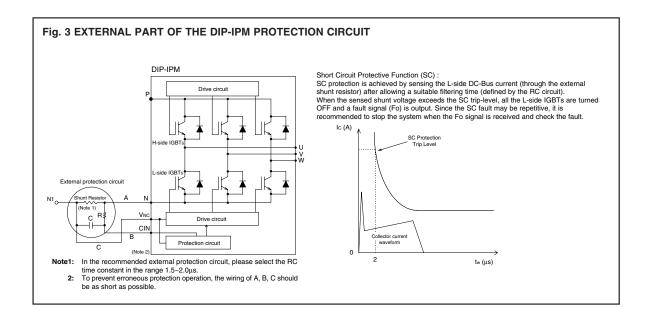

TRANSFER-MOLD TYPE INSULATED TYPE

Oct. 2005

TRANSFER-MOLD TYPE INSULATED TYPE

### **MAXIMUM RATINGS** (Tj = $25^{\circ}$ C, unless otherwise noted) **INVERTER PART**

| Symbol     | Parameter                          | Condition                | Ratings  | Unit |
|------------|------------------------------------|--------------------------|----------|------|
| Vcc        | Supply voltage                     | Applied between P-N      | 450      | V    |
| VCC(surge) | Supply voltage (surge)             | Applied between P-N      | 500      | V    |
| VCES       | Collector-emitter voltage          |                          | 600      | V    |
| ±IC        | Each IGBT collector current        | Tc = 25°C                | 30       | Α    |
| ±ICP       | Each IGBT collector current (peak) | Tc = 25°C, less than 1ms | 60       | Α    |
| Pc         | Collector dissipation              | Tc = 25°C, per 1 chip    | 55.5     | W    |
| Tj         | Junction temperature               | (Note 1)                 | -20~+125 | °C   |

Note 1 : The maximum junction temperature rating of the power chips integrated within the DIP-IPM is 150°C (@ Tc ≤ 100°C) however, to insure safe operation of the DIP-IPM, the average junction temperature should be limited to Tj(ave) ≤ 125°C (@ Tc ≤ 100°C).

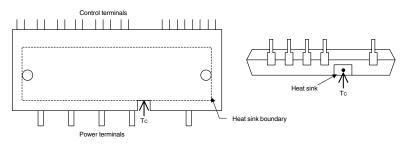

### **CONTROL (PROTECTION) PART**

| Symbol | Parameter                     | Condition  | Ratings     | Unit |
|--------|-------------------------------|--|-------------|------|
| Vd     | Control supply voltage        | Applied between VP1-VPC, VN1-VNC                   | 20          | V    |
| Vdb    | Control supply voltage        | Applied between VUFB-VUFS, VVFB-VVFS,<br>VWFB-VWFS | 20          | V    |
| VIN    | Input voltage                 | Applied between UP, VP, WP-VPC, UN, VN,<br>WN-VNC  | -0.5~VD+0.5 | V    |
| VFO    | Fault output supply voltage   | Applied between FO-VNC                             | -0.5~VD+0.5 | V    |
| IFO    | Fault output current          | Sink current at FO terminal                        | 1           | mA   |
| Vsc    | Current sensing input voltage | Applied between CIN-VNC                            | -0.5~VD+0.5 | V    |

### TOTAL SYSTEM

| Symbol    | Parameter   | Condition   | Ratings  | Unit |
|-----------|---|---|----------|------|
| VCC(PROT) | Self protection supply voltage limit<br>(short circuit protection capability) | $V_D = 13.5 \sim 16.5 V$ , Inverter part<br>T <sub>j</sub> = 125°C, non-repetitive, less than 2 $\mu$ s | 400      | V    |
| Тс        | Module case operation temperature   | (Note 2)  | -20~+100 | °C   |
| Tstg      | Storage temperature   |   | -40~+125 | °C   |
| Viso      | Isolation voltage   | 60Hz, Sinusoidal, AC 1 minute, connecting<br>pins to heat-sink plate                                    | 2500     | Vrms |

| UVDt     | protection                   | 1]≤125.0  |                      | Trip level            |        | 10.3 | —    | 12.5 | V  |
| UVDr     |                              |   |                      | Reset level           |        | 10.8 | —    | 13.0 | V  |
| tFO      | Fault output pulse width     | CFO = 22nF (Note 5)                                   |                      | 1.0                   | 1.8    | —    | ms   |      |    |
| Vth(on)  | ON threshold voltage         | Applied between UP, VP, WP-VPC, UN, VN, WN-VNC        |                      |                       | 2.1    | 2.3  | 2.6  | V    |    |
| Vth(off) | OFF threshold voltage        | Applied between C                                     | JF, VP, VV           | 7- 7-0, UN, VN, VN-VI | NC     | 0.8  | 1.4  | 2.1  | V  |

Note 4: Short circuit protection is functioning only at the low-arms. Please select the external shurt resistance such that the SC trip-level is less than 2.0 times of the collector current rating.
5: Fault signal is output when the low-arms short circuit or control supply under-voltage protective functions operate. The fault output pulse-width tFO depends on the capacitance value of CFO according to the following approximate equation : CFO = 12.2 × 10<sup>-6</sup> × tFO [F].

| VNC                     | VNC variation                   | between VNC-N (including surge   | 2)   | -5.0              | —    | 5.0  | V     |

Note 7: The Allowable r.m.s. current value depends on the actual application conditions.
8: Input signal with ON pulse width less than PWIN(on) might make no response.
9: IPM might make no response or response delay to next turn-on pulse if off-pulse width is less than PWIN(off). (Please refer to Fig. 4) Please refer to Fig. 9 for recommended wiring method too.

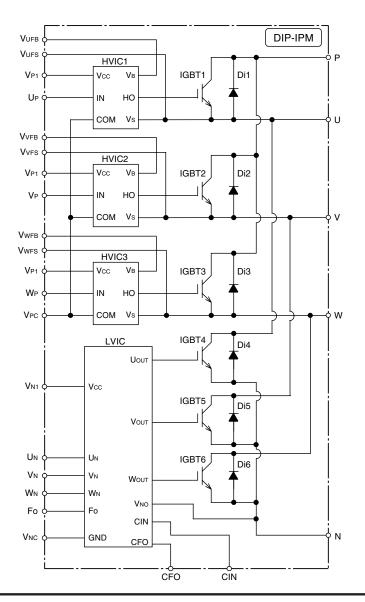

TRANSFER-MOLD TYPE INSULATED TYPE

Broken line ··· off pulse width < PWIN(off) ; turn on time t2

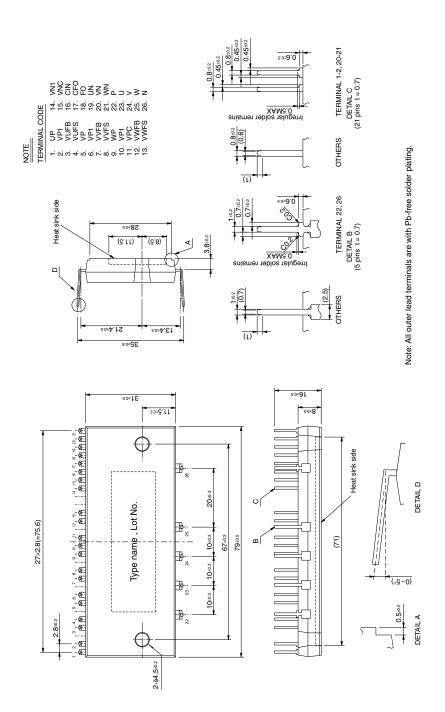

#### Fig. 5 THE DIP-IPM INTERNAL CIRCUIT

TRANSFER-MOLD TYPE INSULATED TYPE

Fig. 6 PACKAGE OUTLINES (Long-pin type : PS21267-AP)

TRANSFER-MOLD TYPE INSULATED TYPE

#### Fig. 7 TIMING CHARTS OF THE DIP-IPM PROTECTIVE FUNCTIONS

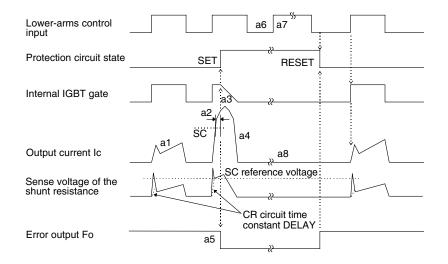

[A] Short-Circuit Protection (Lower-arms only) (with external shunt resistor and CR connection)

- a1. Normal operation : IGBT ON and carrying current.
- a2. Short circuit current detection (SC trigger).
- a3. Hard IGBT gate interrupt.
- a4. IGBT turns OFF.

a5. FO timer operation starts : The pulse width of the FO signal is set by the external capacitor CFO.

- a6. Input "L" : IGBT OFF state.
- a7. Input "H" : IGBT ON state, but during the Fo signal active period the IGBT doesn't turn ON.

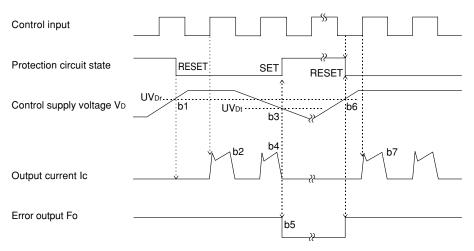

a8. IGBT OFF in spite of "H" input.

#### [B] Under-Voltage Protection (Lower-arm, UVD)

b1. Control supply voltage rises : After the voltage reaches UVDr level, the circuits start to operate when the next input is applied.

- b2. Normal operation : IGBT ON and carrying current.
- b3. Under voltage trip (UVDt).
- b4. IGBT OFF in spite of control input condition.
- b5. Fo operation starts. The minimum pulse width of Fo is set by the external capacitor CFO, and FO outputs continuously during UV period.
- b6. Under voltage reset (UVDr).
- b7. Normal operation : IGBT ON and carrying current.

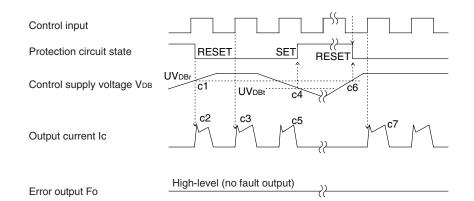

**TRANSFER-MOLD TYPE INSULATED TYPE** 

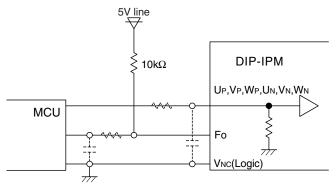

#### [C] Under-Voltage Protection (Upper-arm, UVDB)

- c1. Control supply voltage rises : Operation starts soon after UV\_DBr. c2. Normal operation : IGBT ON and carrying current.

- c3. Under voltage trip (UVDBt).
  c4. IGBT OFF in spite of control input condition, but there is no Fo signal output.
- c5. Under voltage reset (UVDBr).
- c6. Normal operation : IGBT ON and carrying current.

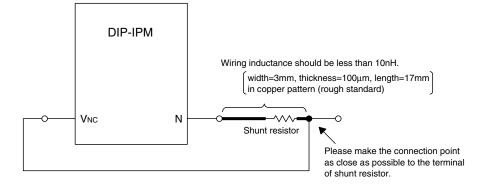

### Fig. 8 RECOMMENDED MCU I/O INTERFACE CIRCUIT

Note : RC coupling at each input (parts shown dotted) might change depending on the PWM control scheme used in the application and the wiring impedance of the application's printed circuit board. The DIP-IPM input signal section integrates a 2.5kΩ(min) pull-down resistor. Therefore, if using external RC filter, pay attention to satisfy the turn-on/off threshold voltage requirement.

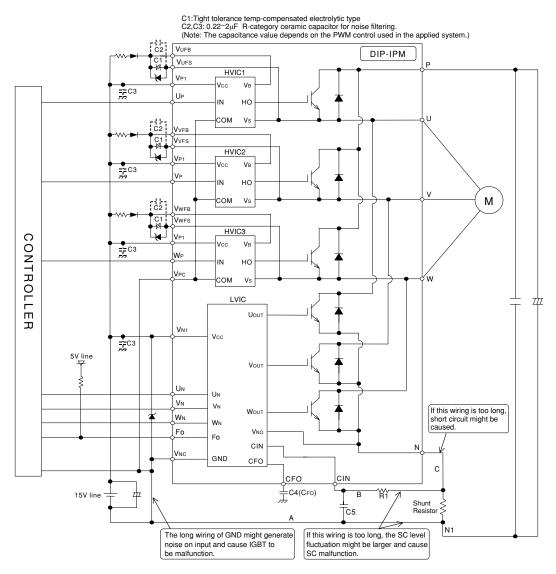

#### Fig. 9 RECOMMENDED WIRING OF SHUNT RESISTOR

TRANSFER-MOLD TYPE INSULATED TYPE

Note 1: To prevent the input signals oscillation, the wiring of each input should be as short as possible. (Less than 2-3cm) 2: By virtue of integrating an application specific type HVIC inside the module, direct coupling to MCU terminals without any opto-coupler

- or transformer isolation is possible. 3: Fo output is open drain type. This signal line should be pulled up to the positive side of the 5V power supply with approximately 10kΩ resistor
- **4**: FO output pulse width is determined by the external capacitor between CFO and VNC terminals (CFO). (Example : CFO =  $22nF \rightarrow tFO = 1.8ms (typ.)$ )
- 5: The logic of input signal is high-active. The DIP-IPM input signal section integrates a 2.5kΩ (min) pull-down resistor. If using external RC filter, pay attention to satisfy the turn-on/off threshold voltage requirement.
- **6**: To prevent malfunction of protection, the wiring of A, B, C should be as short as possible.
- **7**: Please set the R1C5 time constant in the range  $1.5 \sim 2\mu$ s.
- 8: Each capacitor should be located as nearby the pins of the DIP-IPM as possible.
- 9: To prevent surge destruction, the wiring between the smoothing capacitor and the P, N1 pins should be as short as possible. Approximately a 0.1~0.22μF snubber capacitor between the P-N1 pins is recommended.
- 10: To prevent ICs from surge destruction, it is recommended to insert a Zener diode (24V, 1W) between each control supply terminals.
