$R_{level}$  and  $R_{bias}$  are intended to achieve the required output level and to optimize the frequency smearing performance.  $R_{level}$  has to be adjusted to the required output level (approximately 2 k $\Omega$  at  $V_S = -12$  V).  $R_{bias}$  has to be tuned for the best high frequency smearing performance (200 MHz burst).

Supply voltages are internally connected.
