

# M63800FP

7-UNIT 500mA SOURCE TYPE DARLINGTON TRANSISTOR ARRAY WITH CLAMP DIODE

## DESCRIPTION

M63800FP is a seven-circuit output-sourcing Darlington transistor array. The circuits are made of PNP and NPN transistors. This semiconductor integrated circuit performs high-current driving with extremely low input-current supply.

## FEATURES

- High breakdown voltage ( $BV_{CEO} \geq 50V$ )
- High-current driving ( $I_o(\max) = -500mA$ )
- With output clamping diodes
- Driving available with CMOS IC output of 6-16V or with TTL output
- Wide operating temperature range ( $T_a = -20$  to  $+75^\circ C$ )
- Output current-sourcing type

## APPLICATION

Drives of relays, printers, LEDs, fluorescent display tubes and lamps, and interfaces between MOS-bipolar logic systems and relays, solenoids, or small motors

## FUNCTION

The M63800FP has seven circuits, which are made of input inverters and current-sourcing outputs. The outputs are made of PNP transistors and NPN Darlington transistors. The PNP transistor base current is constant. A spike-killer clamping diode is provided between each output pin and GND.  $V_s$  (pin 8) and GND (pin 9) are used commonly among the eight circuits.

The input has resistance of  $3k\Omega$ , and a maximum of 10V can be applied. The output current is 500mA maximum. Supply voltage  $V_s$  is 50V maximum.

The M63800FP is enclosed in a molded small flat package, enabling space-saving design.

## PIN CONFIGURATION

Package type 16P2N-A
