

■ OUTLINE

The R5320G Series are Multi voltage regulator ICs with high output voltage accuracy, extremely low supply current, low noise, low ON-resistance and high ripple rejection by CMOS process. The R5320G Series contain three voltage regulators. Each of these voltage regulators in the R5320G Series consists of a voltage reference unit, an error amplifier, resistors for setting output voltage, a current limit circuit and a chip enable circuit.

The chip enable function contributes to prolong battery life. Further, regulators in the R5320G Series are with low dropout voltage, excellent load transient response and line transient response, thus the R5320G Series are very suitable for the power supply for hand-held communication equipment.

The output voltage of each regulator is fixed with high accuracy by laser trim.

Since the package for these ICs are SSOP8G package, high density mounting of the ICs on boards is possible.

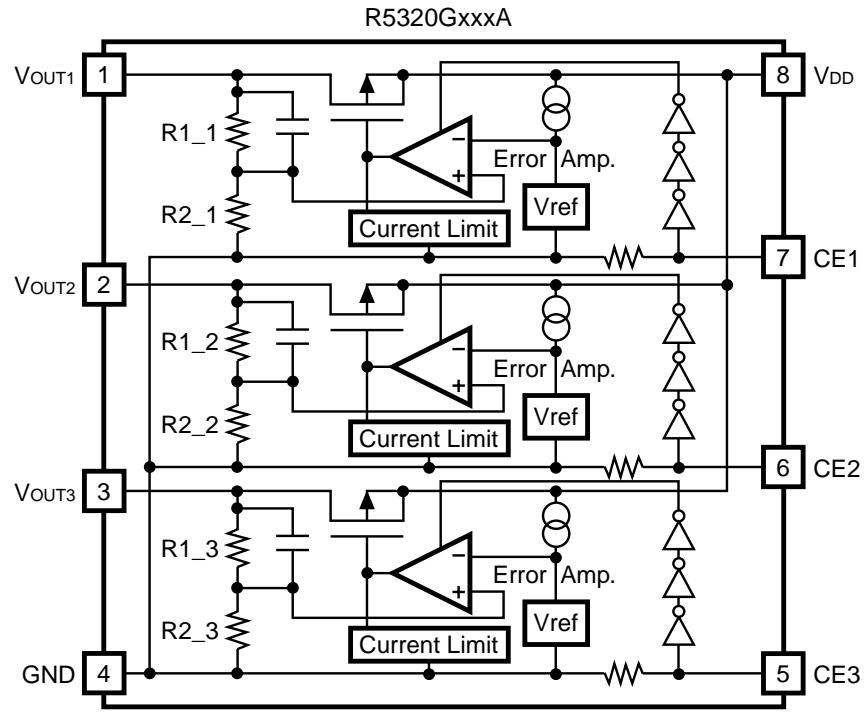

■ FEATURES

- Ultra-Low Supply Current.....TYP. 70 μ A:VR1, TYP. 70 μ A:VR2, TYP. 70 μ A:VR3
- Low Standby CurrentTYP. 0.1 μ A:VR1, TYP. 0.1 μ A:VR2, TYP. 0.1 μ A:VR3
- Low Dropout VoltageTYP. 0.22V (VR1) 0.16V (VR2,VR3)
I_{OUT}=150mA:VR1,80mA:VR2,VR3 (ex. for 3.0V Output Type)
- High Ripple RejectionTYP.70dB (f=1kHz)
- High Output Voltage Accuracy \pm 2.0%
- Excellent Load Transient Response and Line Transient Response
- Small Package8-Pin SSOP (0.65mm pitch)
- Input VoltageMax. 6V

■ APPLICATIONS

- Power source for cellular phones such as GSM,CDMA and Personal Handy-phone System.
- Power source for electrical appliances such as cameras, VCRs, camcorders, etc.
- Power source for battery-powered equipment.

■ OPERATION

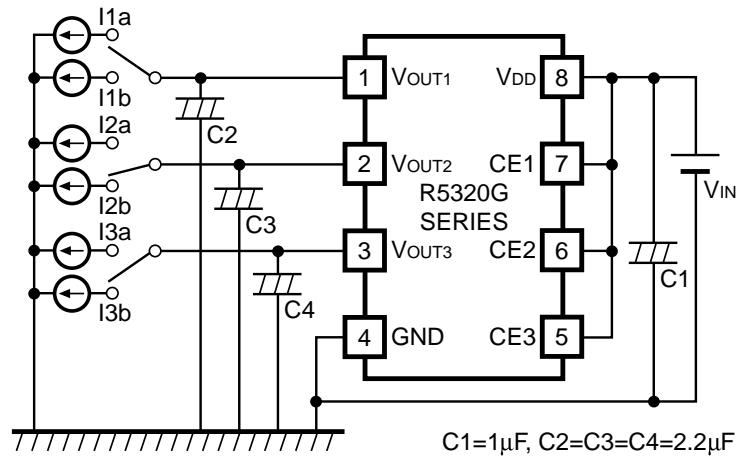

Fluctuation of each regulator's output voltage, or V_{OUT1, 2, 3} is detected individually and put back to an error amplifier through feedback resistors, or R1_1, R2_1, R1_2, R2_2, R1_3, R2_3 and compared with a reference voltage and compensated for the result and make a constant voltage.

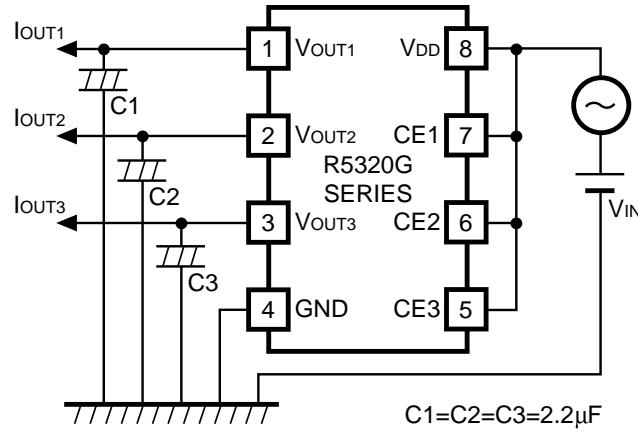

In each regulator, short protection is made by a current limit circuit and stand-by mode is available by a chip enable circuit.

■ TECHNICAL NOTES

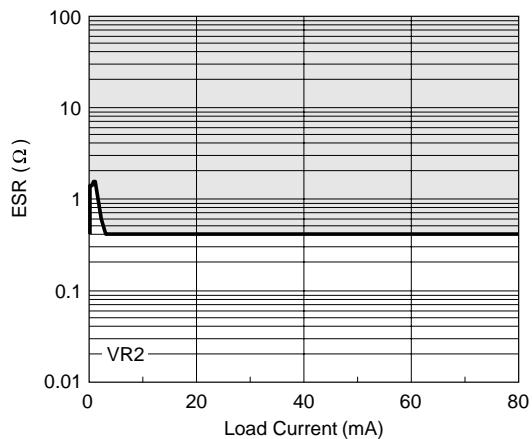

To use this IC with ceramic capacitors, ESR should be set in the range of the following graphs.
Test circuit for Noise level measurement is shown below;

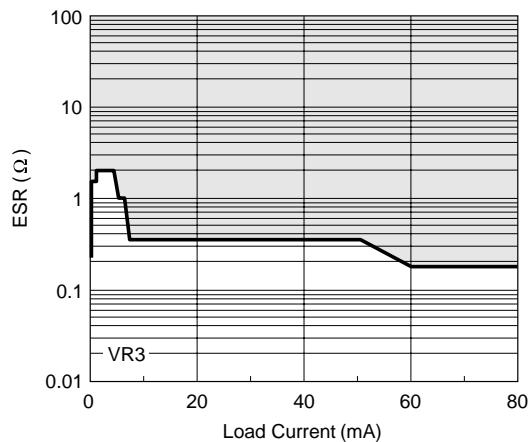

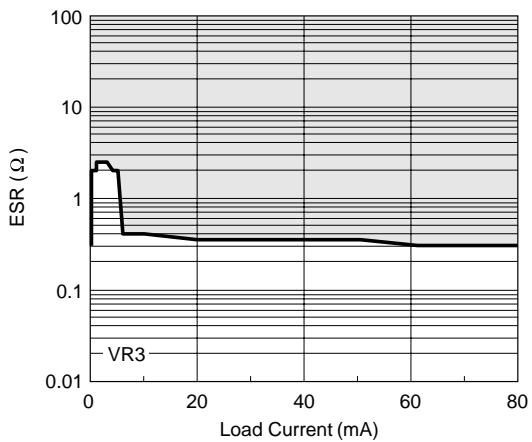

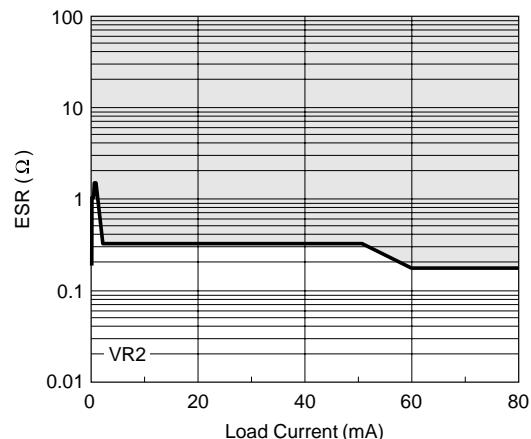

Noise level is measured with a spectrum analyzer and hatched area shows stable areas of which noise level is approximately equal or less than $40\mu\text{V}$ (Avg.). The relation between Load Current (I_{OUT}) and Equivalent Series Resistors (ESR) value of external output capacitor with the stable area is shown below;
