## GP34063

## DC TO DC CONVERTER CONTROLLER

## Description

The GP34063 is a monolithic regulator subsystem, intended for use as DC to DC converter. This device contains a temperature compensated band gap reference, a duty-cycle control oscillator, driver and high current output switch. It can be used for step down, step-up or inverting switching regulators as well as for series pass regulators.

## Features

*Operation from 3.0 V to 40 V .
*Short circuit current limiting.
*Low standby current.
*Output switch current of 1.5 A without external transistors.
*Frequency of operation from 100 Hz to 100 kHz .
*Step-up, step-down or inverting switch regulators.

NOTE : If the switch is driven into hard saturation (non-Darlington configuration) at low switch currents ( $\leq 300 \mathrm{~mA}$ ) and high driver currents ( $\geq 30 \mathrm{~mA}$ ), it may take up to 2.0 us to come out of saturation. This condition will shorten the off time at frequencies $\geq 30 \mathrm{kHz}$, and is magnified at high temperatures. This condition does not occur with a Darlington configuration, since the output switch cannot saturate. If a non-Darlington configuration is used, the following output drive condition is recommended.
