

# LM119-LM219-LM319

## High speed dual comparators

### Features

- Two independent comparators
- Supply voltage: +5V to  $\pm 15V$
- Typically 80ns response time at  $\pm 15V$
- Minimum fan-out of 2 each side
- Maximum input current of  $1\mu A$  over operating temperature range
- Inputs and outputs can be isolated from system ground
- High common-mode slew rate

### Description

These products are precision high speed dual comparators designed to operate over a wide range of supply voltages down to a single 5V logic supply and ground. They feature low input currents and high gains.

The open collector of the output stage makes it compatible with TTL as well as capable of driving lamps and relays at currents up to 25mA.

Although designed primarily for applications requiring operation from digital logic supplies, the comparators are fully specified for power supplies up to  $\pm 15V$ .

They feature faster response than LM111 at the expense of higher current consumption. However, the high speed, wide operating voltage range and low package count make the LM119/219/319 much more versatile.

# 1 Schematic diagram

Figure 1. Circuit schematics (1/2 LM119)

## 2 Absolute maximum ratings and operating conditions

**Table 1. Absolute maximum ratings (AMR)**

Symbol	Parameter	Value	Unit
$V_o - V_{CC}^-$	Output to negative supply voltage	36	V
$V_{CC}^-$	Negative supply voltage	-25	V
$V_{CC}^+$	Positive supply voltage	18	V
$V_{id}$	Differential input voltage	$\pm 5$	V
$V_i$	Input voltage <sup>(1)</sup>	$\pm 15$	V
	Output short-circuit to ground	Infinite	
$T_j$	Maximum junction temperature	150	°C
$T_{stg}$	storage temperature range	-65 to +150	°C
$R_{thja}$	Thermal resistance junction to ambient <sup>(2) (3)</sup>		°C/W
	DIP14 SO-14	80 105	
$R_{thjc}$	Thermal resistance junction to case <sup>(2) (3)</sup>		°C/W
	DIP14 SO-14	33 31	
ESD	HBM: human body model <sup>(4)</sup>	400	V
	MM: machine model <sup>(5)</sup>	100	
	CDM: charged device model <sup>(6)</sup>	1500	

- For supply voltages lower than  $\pm 15V$  the absolute maximum input voltage is equal to the supply voltage.
- Short-circuits can cause excessive heating. Destructive dissipation can result from simultaneous short-circuits on all amplifiers.
- $R_{th}$  are typical values.
- Human body model: 100pF discharged through a 1.5k $\Omega$  resistor between two pins of the device, done for all couples of pin combinations with other pins floating.
- Machine model: a 200pF cap is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 $\Omega$ ), done for all couples of pin combinations with other pins floating.
- Charged device model: all pins and the package are charged together to the specified voltage and then discharged directly to the ground through only one pin. This is done for all pins.

**Table 2. Operating conditions**

Symbol	Parameter	Value	Unit
$V_{CC}$	Supply voltage	5 to $\pm 15$	V
$T_{oper}$	Operating free-air temperature range		°C
	LM119	-55 to + 125	
	LM219	-40 to + 105	
	LM319	0 to + 70	

### 3 Electrical characteristics

Table 3.  $V_{CC} = \pm 15V$ ,  $T_{amb} = +25^{\circ}C$  (unless otherwise specified)

Symbol	Parameter	LM119 - LM219			LM319			Unit
		Min.	Typ.	Max.	Min	Typ.	Max.	
$V_{io}$	Input offset voltage ( $R_s \leq 5k\Omega$ ) <sup>(1) (2)</sup> $T_{min} \leq T_{amb} \leq T_{max}$		0.7	4 7		2	8 10	mV
$I_{io}$	Input offset current <sup>(1)</sup> $T_{min} \leq T_{amb} \leq T_{max}$		30	75 100		80	200 300	nA
$I_{ib}$	Input bias current <sup>(1)</sup> $T_{min} \leq T_{amb} \leq T_{max}$		150	500 1000		250	1000 1200	nA
$A_{vd}$	Large signal voltage gain	10	40		8	40		V/mV
$I_{CC}^{+}$	Positive supply current $V_{CC} = \pm 15V$ $V_{CC}^{+} = +5V, V_{CC}^{-} = 0V$		8 4.3	11.5		8 4.3	12.5	mA
$I_{CC}^{-}$	Negative supply current		3	4.5		3	5	mA
$V_{icm}$	Input common mode voltage range $V_{CC} = \pm 15V$ $V_{CC}^{+} = +5V, V_{CC}^{-} = 0V$	$\pm 12$ 1	$\pm 13$	3	$\pm 12$ 1	$\pm 13$	3	V
$V_{OL}$	Low level output voltage $I_o = 25mA$ $V_i \leq -5mV$ $V_i \leq -10mV$ $T_{min} \leq T_{amb} \leq T_{max}$ $V_{CC}^{+} \geq +4.5V, V_{CC}^{-} = 0V, I_{o(sink)} < 3.2mA$ $V_i \leq -6mV$ $V_i \leq -10mV$		0.75	1.5		0.75	1.5	V
$I_{OH}$	High level output current ( $V_o = +35V$ ) $V_i \geq 5mV$ $V_i \geq 10mV$ $T_{min} \leq T_{amb} \leq T_{max}, V_i \geq 5mV$		0.2	2		0.2	10	$\mu A$
$t_{res}$	Response time <sup>(3)</sup>		80			80		ns

1. These specifications apply for  $V_{CC} = \pm 15V$ , unless otherwise stated. The offset voltage, offset current and bias current specifications apply for any supply voltage from a single +5V up to  $\pm 15V$  supplies. The offset voltages and offset current given are the maximum values required to drive the output down to 1V or up to +14V with a 1mA load current. Thus, these parameters define an error band and take into account the worst case effects of voltage gain and input impedance.
2. At output switch point,  $V_o \approx 1.4V$ , no load, with  $V_{CC}$  from 5V to  $\pm 15V$  and over the full input common-mode range.
3. The response time specified is for a 100mV input step with 5mV overdrive.

## 5 Package information

In order to meet environmental requirements, ST offers these devices in ECOPACK<sup>®</sup> packages. These packages have a lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: [www.st.com](http://www.st.com).
