

# 0.7Ω, Low-Voltage, Quad 2:1 Analog Multiplexers

## General Description

The MAX4780/MAX4784 are low on-resistance, low-voltage, quad 2:1 analog multiplexers that operate from a single +1.6V to +4.2V supply. These devices have fast switching speeds ( $t_{ON} = 20\text{ns}$ ,  $t_{OFF} = 8\text{ns}$ ), handle rail-to-rail analog signals, and consume less than  $1\mu\text{W}$  of quiescent power.

When powered from a +2.7V supply, the MAX4780/MAX4784 feature low  $0.7\Omega$  on-resistance ( $R_{ON}$ ), and  $0.1\Omega$   $R_{ON}$  flatness. The digital logic input is +1.8V CMOS-logic compatible when using a single +3V supply.

The MAX4780/MAX4784 are available in 16-pin TSSOP and 3mm x 3mm thin QFN packages.

## Applications

Power Routing  
 Battery-Powered Systems  
 Audio and Video Signal Routing  
 Low-Voltage Data-Acquisition Systems  
 Communications Circuits  
 PCMCIA Cards  
 Cellular Phones  
 Modems  
 Hard Drives

## Features

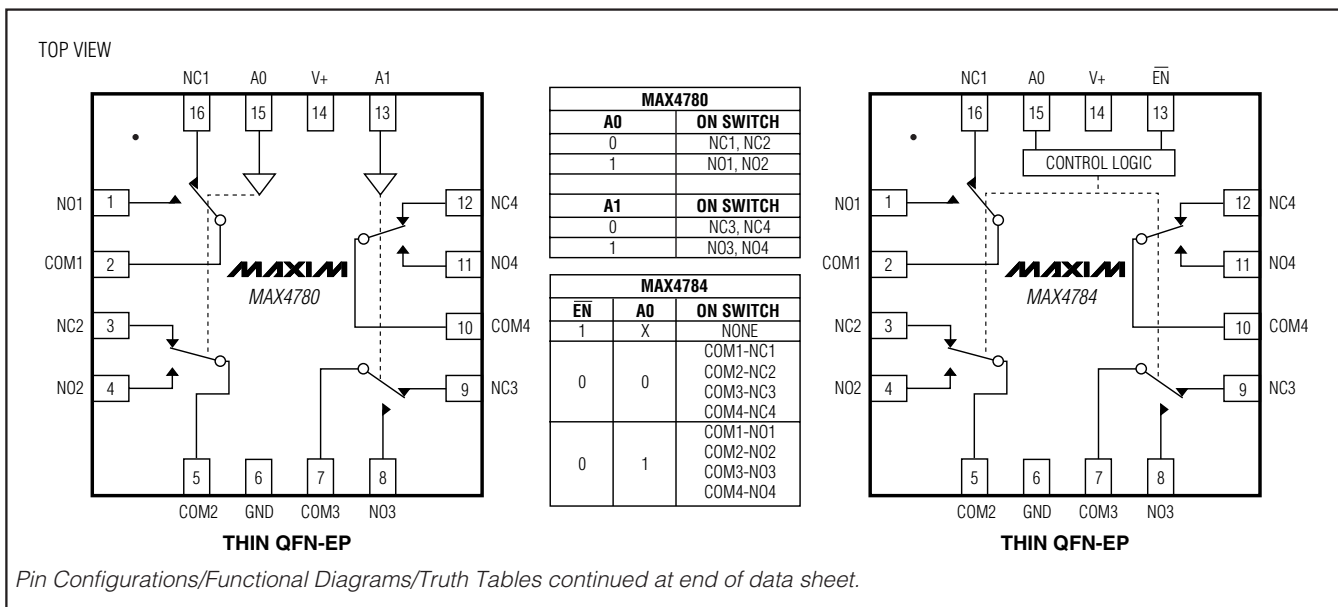

- ◆ Single-Supply Operation from 1.6V to 4.2V
- ◆ Low  $R_{ON}$   
 $0.7\Omega$  (+2.7V Supply)  
 $2\Omega$  (+1.8V Supply)
- ◆  $0.1\Omega$   $R_{ON}$  Flatness (+2.7V Supply)
- ◆ 3mm x 3mm Thin QFN Package
- ◆ +1.8V CMOS Logic Compatible
- ◆ Fast Switching:  $t_{ON} = 20\text{ns}$ ,  $t_{OFF} = 8\text{ns}$

## Ordering Information

PART	TEMP RANGE	PIN-PACKAGE
MAX4780ETE	-40°C to +85°C	16 Thin QFN-EP*
MAX4780EUE	-40°C to +85°C	16 TSSOP
MAX4784ETE	-40°C to +85°C	16 Thin QFN-EP*
MAX4784EUE	-40°C to +85°C	16 TSSOP

\*EP = Exposed pad.

## Pin Configurations/Functional Diagrams/Truth Tables

# 0.7Ω, Low-Voltage, Quad 2:1 Analog Multiplexers

## ABSOLUTE MAXIMUM RATINGS

Voltages Referenced to GND

V+, A <sub>-</sub> , EN	-0.3V to +4.6V
COM <sub>-</sub> , NO <sub>-</sub> , NC <sub>-</sub> (Note 1)	-0.3V to (V+ + 0.3V)
Continuous Current COM <sub>-</sub> , NO <sub>-</sub> , NC <sub>-</sub>	±300mA
Peak Current COM <sub>-</sub> , NO <sub>-</sub> , NC <sub>-</sub> (pulsed at 1ms 10% duty cycle)	±500mA

Continuous Power Dissipation (T<sub>A</sub> = +70°C)

16-Pin Thin QFN (derate 14.7mW/°C above +70°C)	1176.5mW
16-Pin TSSOP (derate 9.4mW/°C above +70°C)	755mW
Operating Temperature Range	-40°C to +85°C
Maximum Junction Temperature	+150°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature (soldering, 10s)	+300°C

**Note 1:** Signals on COM<sub>-</sub>, NO<sub>-</sub>, or NC<sub>-</sub> exceeding V+ or GND are clamped by internal diodes. Limit forward current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

- Note 2:** The algebraic convention, where the most negative value is a minimum and the most positive value is a maximum, is used in this data sheet.
- Note 3:** -40°C specifications are guaranteed by design.
- Note 4:** R<sub>ON</sub> and ΔR<sub>ON</sub> matching specifications for QFN packaged parts are guaranteed by design.
- Note 5:** ΔR<sub>ON</sub> = R<sub>ON</sub>(MAX) - R<sub>ON</sub>(MIN).
- Note 6:** Flatness is defined as the difference between the maximum and the minimum value of on-resistance as measured over the specified analog signal ranges.
- Note 7:** Leakage parameters are 100% tested at T<sub>A</sub> = +85°C, and guaranteed by correlation over the full rated temperature range.
- Note 8:** Guaranteed by design.
- Note 9:** Off-isolation = 20log<sub>10</sub>(V<sub>COM\_-</sub>/V<sub>NO\_-</sub>), V<sub>COM\_-</sub> = output, V<sub>NO\_-</sub> = input to off switch.
- Note 10:** Between two switches.
- Note 11:** Parts are guaranteed to 1 million cycles of operation. (Cycle = switch on → switch off → switch on.)
- Note 12:** The minimum load resistance is 8Ω. (See the *Typical Application Circuit*.)

15	13	—	—	A1	Address Input
—	—	15	13	$\overline{EN}$	Enable. Connect to GND for normal operation. Connect to logic-level high to turn all switches off.
16	14	16	14	V+	Positive Supply Voltage
—	—	—	—	EP	Exposed Pad. Internally connected to GND. Connect to a large ground plane to maximize thermal performance. Not intended as an electrical connection point. (Thin QFN package only.)

## Detailed Description

The MAX4780/MAX4784 are low 0.7Ω (at V+ = +2.7V) on-resistance, low-voltage, quad 2:1 analog multiplexers/demultiplexers that operate from a +1.6V to +4.2V single supply. CMOS switch construction allows switching analog signals that are within the supply voltage range (GND to V+).

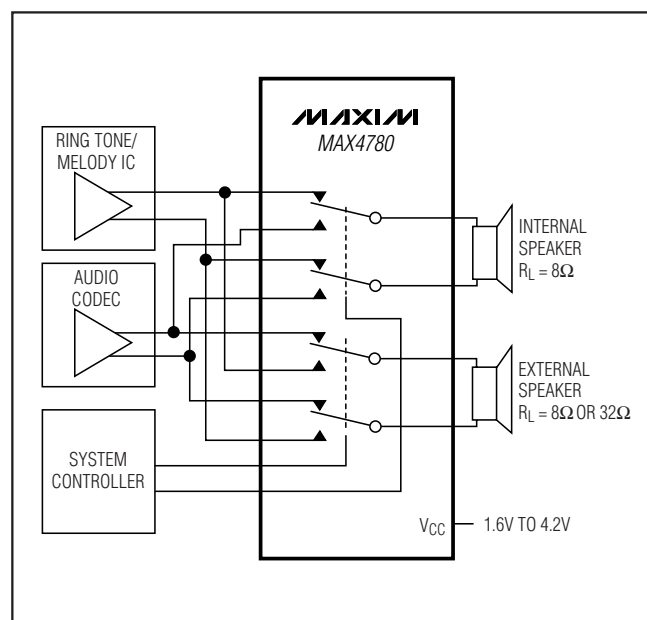

When powered from a +2.7V supply, the 0.7Ω RON allows high continuous currents to be switched in a variety of applications.

## Applications Information

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings, because stresses beyond the listed ratings can cause permanent damage to the devices. Always sequence V+ on first, followed by NO\_, NC\_, or COM\_.

Although it is not required, power-supply bypassing improves noise margin and prevents switching noise propagation from the V+ supply to other components. A 0.1μF capacitor, connected from V+ to GND, is adequate for most applications.

## Typical Application Circuit

# 0.7Ω, Low-Voltage, Quad 2:1 Analog Multiplexers

## Logic Inputs

The MAX4780/MAX4784 logic inputs can be driven up to +4.2V regardless of the supply voltage. For example, with a +1.8V supply,  $A_+$  and  $\overline{EN}$  may be driven low to GND and high to +4.2V. Driving  $A_+$  and  $\overline{EN}$  rail-to-rail minimizes power consumption. Drive  $\overline{EN}$  low to enable the  $COM_+$  outputs. When  $\overline{EN}$  is high, the  $COM_+$  outputs are high impedance.

## Analog Signal Levels

Analog signals that range over the entire supply voltage ( $V_+$  to GND) can be passed with very little change in on-

resistance (see the *Typical Operating Characteristics*). The switches are bidirectional, so the  $NO_+$ ,  $NC_+$ , and  $COM_+$  pins can be used as either inputs or outputs.

## Layout

High-speed switches require proper layout and design procedures for optimum performance. Reduce stray inductance and capacitance by keeping traces short and wide. Ensure that bypass capacitors are as close to the device as possible. Use large ground planes where possible.
