

MN3011

3328-STAGE BBD with 6 TAPS

General description

The MN3011 is a 3328-stage BBD with 6 tap outputs suitably used for reverberation effect in audio equipments such as electronic organs. Signal of different delay time is output from each of the 6 tap outputs. Natural reverberation effect can easily be realized by mixing these output signals properly. Delay time is freely varied by changing the clock frequency.

Features

- 3328-stage audio signal delay device with 6 output taps.
- The stage of each output tap has no relation to multiplex, each other, therefore natural reverberation effect can be obtained by mixing output signals.
- Clock component cancellation capability.
- Dynamic range: $S/N \geq 76\text{dB}$ typ.
- No insertion loss: $L_i = 0\text{dB}$ typ.
- Low distortion: $\text{THD} = 0.4\%$ typ.
- P channel silicon gate process.
- Special 12-Lead Dual-In-Line Plastic Package.

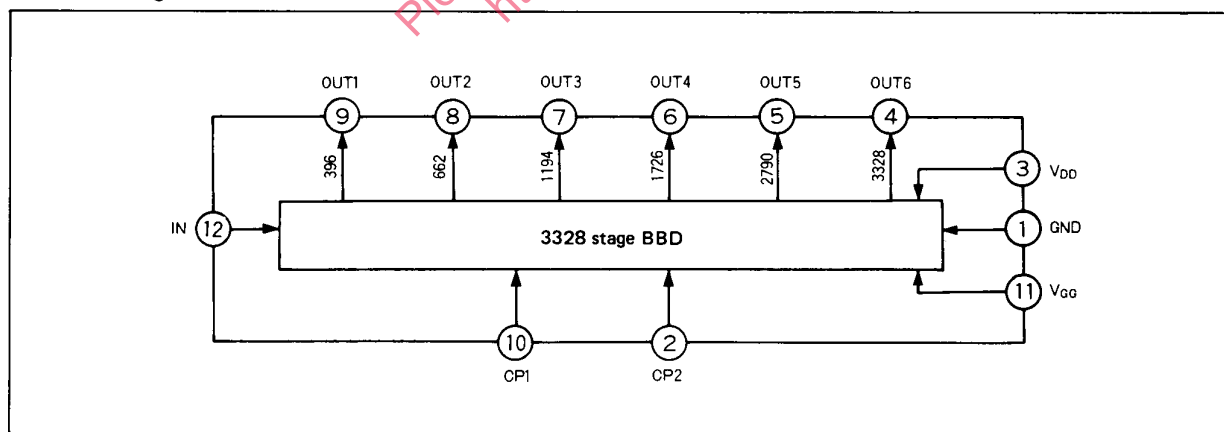

Applications

- Reverberation effect in audio equipment.
- Chorus effect in electronic musical instruments.

Terminal Assignments

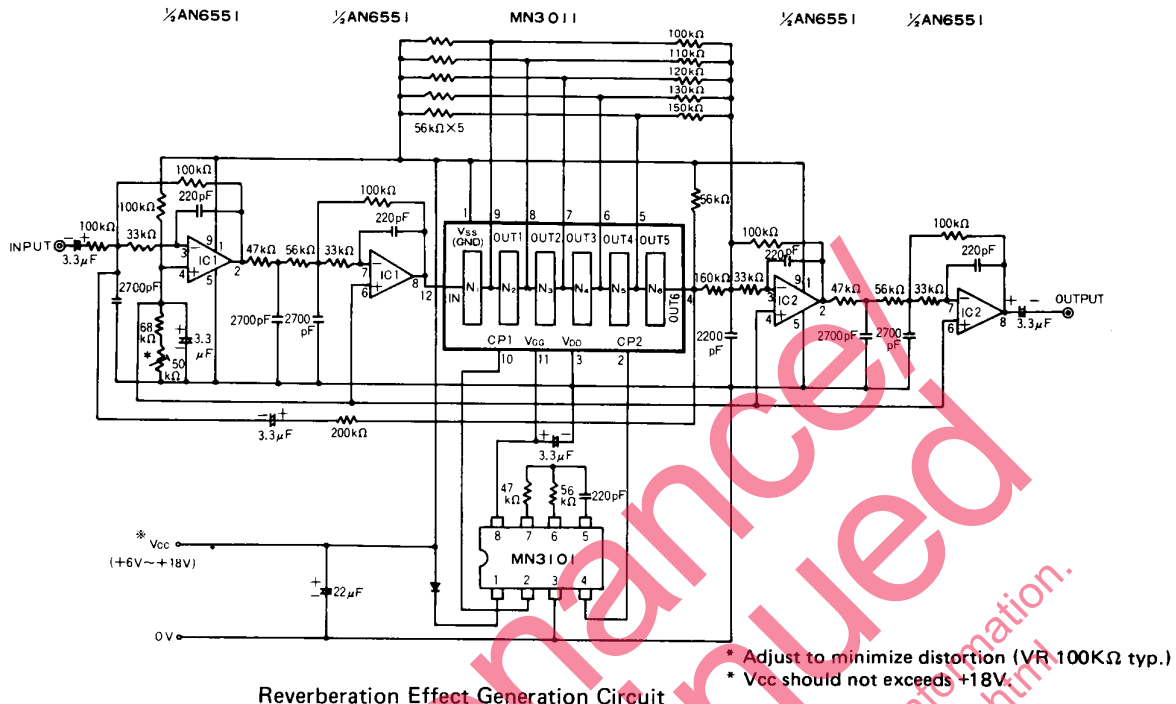

Terminal Description

Terminal No.	Symbol	Terminal Name	Description
1	GND	Earth terminal	Connected to the earth terminal.
2	CP2	Clock input 2	Basic clock pulse is applied to transfer the electron of BBD.
3	V _{DD}	V _{DD} applying terminal	Supply voltage of -15V is applied.
4	OUT 6	Output terminal 6	Output of 3328th and 3329th-stage are composed and output is obtained by cancelling the clock components.
5	OUT 5	Output terminal 5	Composed output of 2790th and 2791st-stage are obtained.
6	OUT 4	Output terminal 4	Composed output of 1726th and 1727th-stage are obtained.
7	OUT 3	Output terminal 3	Composed output of 1194th and 1195th-stage are obtained.
8	OUT 2	Output terminal 2	Composed output of 662nd and 663rd-stage are obtained.
9	OUT 1	Output terminal 1	Composed output of 396th and 397th-stage are obtained.
10	CP1	Clock input 1	Clock pulse of reverse phase to CP2 is applied.
11	V _{GG}	V _{GG} applying terminal	This terminal applies bias of V _{GG} = V _{DD} + 1V to the MOS transistor gate that is inserted in series to transfer gate of BBD.
12	IN	Signal input terminal	Analog signal to be delayed is input. Most suitable DC bias should be applied to this terminal.

Request for your special attention and precautions in using the technical information and semiconductors described in this book

- (1) If any of the products or technical information described in this book is to be exported or provided to non-residents, the laws and regulations of the exporting country, especially, those with regard to security export control, must be observed.
- (2) The technical information described in this book is intended only to show the main characteristics and application circuit examples of the products, and no license is granted under any intellectual property right or other right owned by our company or any other company. Therefore, no responsibility is assumed by our company as to the infringement upon any such right owned by any other company which may arise as a result of the use of technical information described in this book.
- (3) The products described in this book are intended to be used for standard applications or general electronic equipment (such as office equipment, communications equipment, measuring instruments and household appliances).
Consult our sales staff in advance for information on the following applications:
 - Special applications (such as for airplanes, aerospace, automobiles, traffic control equipment, combustion equipment, life support systems and safety devices) in which exceptional quality and reliability are required, or if the failure or malfunction of the products may directly jeopardize life or harm the human body.
 - Any applications other than the standard applications intended.
- (4) The products and product specifications described in this book are subject to change without notice for modification and/or improvement. At the final stage of your design, purchasing, or use of the products, therefore, ask for the most up-to-date Product Standards in advance to make sure that the latest specifications satisfy your requirements.
- (5) When designing your equipment, comply with the range of absolute maximum rating and the guaranteed operating conditions (operating power supply voltage and operating environment etc.). Especially, please be careful not to exceed the range of absolute maximum rating on the transient state, such as power-on, power-off and mode-switching. Otherwise, we will not be liable for any defect which may arise later in your equipment.
 - Even when the products are used within the guaranteed values, take into the consideration of incidence of break down and failure mode, possible to occur to semiconductor products. Measures on the systems such as redundant design, arresting the spread of fire or preventing glitch are recommended in order to prevent physical injury, fire, social damages, for example, by using the products.
- (6) Comply with the instructions for use in order to prevent breakdown and characteristics change due to external factors (ESD, EOS, thermal stress and mechanical stress) at the time of handling, mounting or at customer's process. When using products for which damp-proof packing is required, satisfy the conditions, such as shelf life and the elapsed time since first opening the packages.
