### FEATURES

**1. High contact reliability over a long life has been made possible for low level loads.**

Using a low level load (1 mV 10 $\mu$ A to 10 V 10 mA) 10<sup>7</sup> operations were achieved with a static contact resistance of Max. 100 m $\Omega$  (voltage drop of 20 mV, 1 mA, 1 kHz) and a dynamic contact resistance of Max. 1  $\Omega$  (Measurement delay 10 ms, voltage drop of 20 mV, 1 mA, 1 kHz).

**2. High sensibility of 50 mW**

By using the highly efficient polar magnetic circuit "seesaw balance armature mechanism", a rated power consumption of 50 mW (for single side stable type) has been achieved.

**3. Low thermal electromotive force**

Reducing the heat from the coil enables a thermal electromotive force of 3  $\mu$ V or less.
