$BV_{DSX}/$ $BV_{DGX}$	$R_{DS(ON)}$ (max)	$I_{DSS}$ (min)	Package
350V <sub>P</sub>	30Ω	140mA	SOT-89

### Features

- Low  $R_{DS(ON)}$  at Cold Temperatures
- $R_{DS(on)}$  30Ω max. at 25°C
- High Input Impedance
- High Breakdown Voltage: 350V<sub>P</sub>
- Low  $V_{GS(off)}$  Voltage: -1.6 to -3.9V
- Small Package Size: SOT-89

### Applications

- Ignition Modules
- Normally-On Switches
- Solid State Relays
- Converters
- Telecommunications
- Power Supply

### Description

The CPC3730 is an N-channel, depletion mode, field effect transistor (FET) that utilizes Clare's proprietary third-generation vertical DMOS process. The third-generation process realizes world class, high voltage MOSFET performance in an economical silicon gate process. Our vertical DMOS process yields a robust device, with high input impedance, for use in high power applications. The CPC3730 is a highly reliable FET device that has been used extensively in Clare's solid state relays for industrial and telecommunications applications.

This device excels in power applications requiring low drain-source resistance, particularly in cold environments such as automotive ignition modules. The CPC3730 offers a low, 30Ω maximum, on-state resistance at 25°C.

The CPC3730 has a minimum breakdown voltage of 350V<sub>P</sub>, and is available in an SOT-89 package. As with all MOS devices, the FET structure prevents thermal runaway and thermal-induced secondary breakdown.

### Circuit Symbol

### Absolute Maximum Ratings @ 25°C

Parameter	Ratings	Units
Drain-to-Source Voltage	350	V <sub>P</sub>
Gate-to-Source Voltage	±20	V <sub>P</sub>
Total Package Dissipation	1.6 <sup>1</sup>	W
Operational Temperature	-55 to +125	°C
Storage Temperature	-55 to +125	°C

<sup>1</sup> Mounted on FR4 board 1"x1"x0.062"

Absolute Maximum Ratings are stress ratings. Stresses in excess of these ratings can cause permanent damage to the device. Functional operation of the device at conditions beyond those indicated in the operational sections of this data sheet is not implied.

## Manufacturing Information

### Moisture Sensitivity

All plastic encapsulated semiconductor packages are susceptible to moisture ingress. Clare classified all of its plastic encapsulated devices for moisture sensitivity according to the latest version of the joint industry standard, **IPC/JEDEC J-STD-020**, in force at the time of product evaluation. We test all of our products to the maximum conditions set forth in the standard, and guarantee proper operation of our devices when handled according to the limitations and information in that standard as well as to any limitations set forth in the information or standards referenced below.

Failure to adhere to the warnings or limitations as established by the listed specifications could result in reduced product performance, reduction of operable life, and/or reduction of overall reliability.

This product carries a **Moisture Sensitivity Level (MSL) rating** as shown below, and should be handled according to the requirements of the latest version of the joint industry standard **IPC/JEDEC J-STD-033**.

Device	Moisture Sensitivity Level (MSL) Rating
CPC3730C	MSL 1

### ESD Sensitivity

This product is **ESD Sensitive**, and should be handled according to the industry standard **JESD-625**.

### Reflow Profile

This product has a maximum body temperature and time rating as shown below. All other guidelines of **J-STD-020** must be observed.

Device	Maximum Temperature x Time
CPC3730C	260°C for 30 seconds

### Board Wash

Clare recommends the use of no-clean flux formulations. However, board washing to remove flux residue is acceptable. Since Clare employs the use of silicone coating as an optical waveguide in many of its optically isolated products, the use of a short drying bake may be necessary if a wash is used after solder reflow processes. Chlorine-based or Fluorine-based solvents or fluxes should not be used. Cleaning methods that employ ultrasonic energy should not be used.
