CERAFIL® for FM

(Global Part Number) SF E LA 10M7 FAA0 -R0

Product ID

| Product ID | |
|------------|-----------------|
| SF | Ceramic Filters |

20scillation/Numbers of Element

| Code | Oscillation/Numbers of Element |
|------|---|
| E | 2 Elements Thickness Expander mode |
| Т | 3 Elements Thickness Expander mode |
| К | 2 Elements Thickness Expander mode (2nd Harmonic) |
| v | 2 Elements Thickness Expander mode (3rd Over Tone) |

3Structure/Size

| Code | Structure/Size |
|------|----------------|
| L | Lead Type |
| C□ | Chip Type |

☐ is expressed "A" or subsequent code, which indicates the size.

4 Nominal Center Frequency

Expressed by four-digit alphanumerics. The unit is in hertz (MHz). Decimal point is expressed by capital letter "M".

5Product Specification

| Code | Product Specification |
|------|--|
| FAA0 | Four-digit alphanumerics express pass-bandwidth, center frequency tolerance, rank, series, others. |

6 Packaging

| Code | Packaging |
|------|--|
| -B0 | Bulk |
| -R0 | Plastic Taping ø180mm |
| -R1 | Plastic Taping ø330mm |
| -A0 | 1500pcs. /Radial Taping H ₀ =18mm |
| -A1 | 1000pcs. /Radial Taping H ₀ =18mm |

Radial taping is applied to lead type and plastic taping to chip type. With non-standard products, two-digit alphanumerics indicating "Individual Specification" is added between "Sproduct Specification" and "Spackaging".

Discriminators for FM

1 Product ID

| Product ID | |
|------------|----------------|
| CD | Discriminators |

2Oscillation

| Code | Oscillation |
|------|-------------------------|
| Α | Thickness Expander mode |

3Structure/Size

| Code | Structure/Size |
|------|----------------|
| L□ | Lead Type |
| | Chip Type |

 \square is expressed "A" or subsequent code, which indicates the size.

Mominal Center Frequency

Expressed by four-digit alphanumerics . The unit is in hertz (MHz). Decimal point is expressed by capital letter " \mathbf{M} ".

⑤Product Specification

| Code | Product Specification |
|------|--|
| GA | Two-digit alphanumerics express type, center frequency, rank, others |

6IC

| Code | IC |
|------|----------------------------|
| 001 | Applicable IC Control Code |

Packaging

| Code | Packaging |
|------|------------------------------------|
| -B0 | Bulk |
| -A0 | Radial Taping H ₀ =18mm |
| -R0 | Plastic Taping (ø180mm) |
| -R1 | Plastic Taping (ø330mm) |

Radial taping is applied to lead type and plastic taping to chip type. With non-standard products, an alphanumerics indicating "Individual Specification" is added between "IC" and "Packaging".

CERAFIL® Chip Type SFECV Series

SFECV10M7 series for FM-receivers are monolithic type ceramic filters which utilize the energy trapped thickness vibration-mode of the piezoelectric ceramic. By taking advantage of the very low profile, new SFECV series and PFWCC(kHz filter for AM receiver) enable costomers to make AM/FM set so thin, and it can be of help to the total chip circuit.

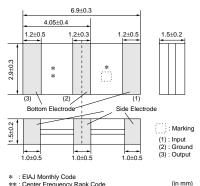

■ Features

- 1. Super-thin. Only 1.5mm. The most suitable ceramic filter available for thinning substrates.
- 2. Heat resistant. Reflow soldering can be performed because of its excellent heat resistance.
- 3. Piezoelectric element is connected in the sandwich shape by heat resistant substrate, thus it has excellent mechanical strength, and it is suitable for automatic mounting.
- 4. Various bandwidths are available. Select a suitable type in accordance with the desired selectivity.
- 5. Electrical characteristics are the same as conventional "CERAFIL".

■ Applications

- 1. Small, thin radios
- 2. Automotive radios
- 3. Headphone steros

Chip CERAFIL® SFECV Series Notice

■ Notice (Soldering and Mounting)

- 1. Standard Reflow Soldering Condition
- (1) Reflow

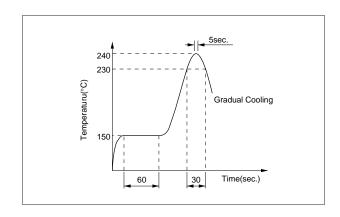

Lead terminal is directly contacted with the tip of soldering iron of 280±5°C for 3.0±0.5 seconds.

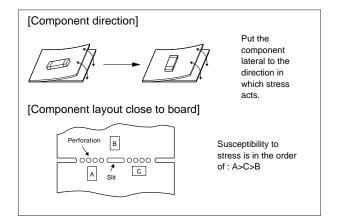

2. Wash

The component cannot be withstand washing.

■ Notice (Handling)

- The component will be damaged when an excessive stress is applied.
- The component may be damaged if excess mechanical stress is applied to it mounted on the printed circuit board.
- Design layout of components on the PC board to minimize the stress imposed on the warp or flexure of the board.
- 4. After installing chips, if solder is excessively applied to the circuit board, mechanical stress will cause destruction resistance characteristics to lower. To prevent this, be extremely careful in determining shape and dimension before designing the circuit board diagram.
- 5. When the positioning claws and pick up nozzle are worn, the load is applied to the chip while positioning is concentrated to one positioning accuracy, etc. Careful checking and maintenance are necessary to prevent unexpected trouble.
- 6. When correcting chips with a soldering iron, the tip of the soldering iron should not directly touch the chip component. Depending on the soldering conditions, the effective area of terminations may be reduced. the use of solder containing Ag should be done to prevent the electrode erosion.
- 7. Do not clean or wash the component as it is not hermetically sealed.
- In case of covering filter with over coat, conditions such as material of resin, cure temperature, and so on should be evaluated well.
- Do not use strong acidity flux, more than 0.2wt% chlorine content, in re-flow soldering.
- 10. Accurate test circuit values are required to measure electrical characteristics. It may be a cause of miscorrelation if there is any deviation, especially stray capacitance, from the test circuit in the specification.

CERAFIL® Small Chip Type SFECS Series

SFECS10M7 series for FM-receivers are small, high performance and super thin (1.4mm) filters.

Piezoelectric element is connected in the sandwich shape by ceramics substrate.

They have 1.4mm thickness and small mounting area. (3.5x3.1mm)

New SFECS series and PFWCC(kHz filter for AM receiver) enable customers to make AM/FM set so thin and small sized.

- 1. The filters are mountable by automatic placers.
- They are slim, at only 1.4mm thickness, and have a small mounting area (3.5x3.1mm) enabling flexible PCB design.
- Various bandwidths are available. Select a suitable type in accordance with the desires selectivity.
- 4. Operating temperature range :

-20 to +80 (degree C)

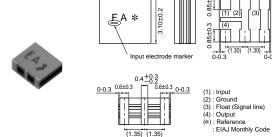

Storage temperature range:

-40 to +85 (degree C)

■ Applications

- 1. Small, thin radios
- 2. Headphone stereos

■ Notice (Soldering and Mounting)

- 1. Standard Reflow Soldering Condition
- (1) Reflow

Filter shall be soldered at 280±5°C for 3.0±0.5 seconds. The soldering iron shall not touch the filter white soldering.

2. Wash

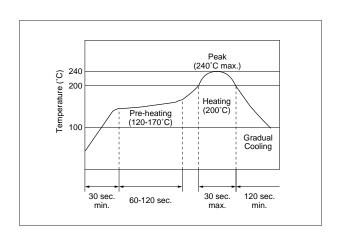

The component cannot be withstand washing.

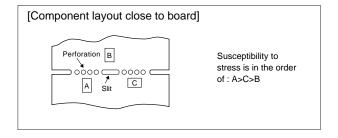

■ Notice (Handling)

- The component will be damaged when an excessive stress is applied.
- The component may be damaged if excess mechanical stress is applied to it mounted on the printed circuit board.
- Design layout of components on the PC board to minimize the stress imposed on the warp or flexure of the board.
- 4. After installing chips, if solder is excessively applied to the circuit board, mechanical stress will cause destruction resistance characteristics to lower. To prevent this, be extremly careful in determining shape and dimension before designing the circuit board diagram.
- 5. When the positioning claws and pick up nozzle are worn, the load is applied to the chip while positioning is concentrated to one positioning accuracy, etc. Careful checking and maintenance are necessary to prevent unexpected trouble.
- 6. When correcting chips with a soldering iron, the tip of the soldering iron should not directly touch the chip component. Depending on the soldering conditions, the effective area of terminations may be reduced. The use of solder containing Ag should be done to prevent the electrode erosion.
- Do not clean or wash the component as it is not hermetically sealed.
- In case of covering filter with over coat, conditions such as material of resin, cure temperature, and so on should be evaluated well.
- Do not use strong acidity flux, more than 0.2wt% chlorine content, in re-flow soldering.
- electrical characteristics.

 It may be a cause of mis-correlation if there is any deviation, especially stray capacitance, from the test circuit in the specification.

10. Accurate test circuit values are required to measure

CERAFIL® Standard Lead Type

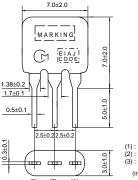

SFELA10M7 series for FM-receivers are monolithic type ceramic filters which use the energy trapped thickness vibration-mode of the piezoelectric ceramic.

■ Features

- 1. These miniature filters have high mechanical
- 2. Low loss, favorable waveform symmetry, and high selectivity.
- 3. Various band widths are available for applications in wide to narrow bands.
- 4. Small dispersion and stable characteristics.
- 5. Change in center frequency is typically within ±30ppm/(degree C) at -20 to +80 (degree C).
- 6. High reliability.

SFELA10M7FA00-B0

CERAFIL® Low-loss Type

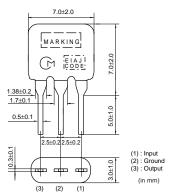

SFELA10M7 series for FM-receivers are monolithic type ceramic filters which use the energy trapped thickness vibration-mode of the piezoelectric ceramic.

■ Features

- Insertion loss is 1 to 1.5dB lower than conventional products. This types are useful for elevating the sensitivity of sets.
- 2. Small dispersion and stable characteristics.
- 3. Excellent shape factor of frequency response.
- 4. Good waveform symmetry.

CERAFIL® Low-profile Type

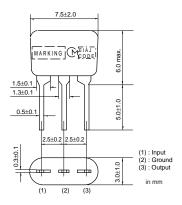

SFELB10M7 series for FM-receivers are monolithic type ceramic filters which use the energy trapped thickness vibration-mode of the piezoelectric ceramic.

■ Features

- 1. Installed height is 5 mm, making it well suited for compact, thin sets.
- 2. Environmental reliability is the same as those of the ceramic filter SFELA10M7 series.

■ Frequency Characteristics (Spurious)

CERAFIL® Lower Spurious Response Type

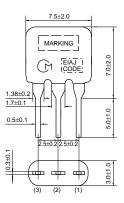

SFELA10M7 series for FM-receivers are monolithic type ceramic filters which use the energy trapped thickness vibration-mode of the piezoelectric ceramic.

■ Features

- 1. This type has lower spurious response compared to the standard filters.
- 2. This types are suitable for higher spurious suppression radio.

CERAFIL® Wider Band-width Type

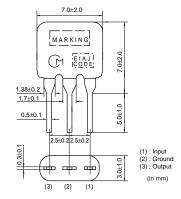

SFELA10M7 Series for FM-receivers are monolithic type ceramic filters which use the energy trapped thickness vibration-mode of the piezoelectric ceramic.

■ Features

- 1. Realizes wider or narrower band characteristics not obtained by conventional ceramic filters.
- 2. Temperature characteristics are the best available, the same as those of Murata's conventional ceramic filters. Thus, even in the case of narrow band filters, the center frequency is stable even if temperature changes.

CERAFIL® Narrow Band Type

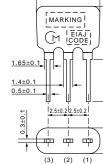

SFELA10M7LFTA/KAH0, SFVLA/SFKLA series realizes narrower band characteristics not obtained by conventional ceramic filters. Besides, low spurious and temperature characteristics is stable. This series suits for European car-audio or AM up conversion use that needs narrow band characteristics.

CERAFIL® For FM -IF Tuners

SFELA10M7 series for FM-receivers are monolithic type ceramic filters which use the energy trapped thickness vibration-mode of the piezoelectric ceramic.

■ Features

- 1. Little dispersion of amplitude characteristics and phase characteristics (G. D. T. characteristics).
- 2. The SFELA10M7G_X series has G. D. T characteristics and is useful for obtaining low distortion. SFELA10M7F_L series, in these ceramic filters, being in harmony with flatness of G. D. T., roundness of the amplitude and selectivity characteristics, therefore, these ceramic filters are suitable to high-grade stereo tuners. Even if mismatching condition, they can keep little distortion because of low Qm of ceramic material. The SFELA10M7FA0G series is based on SFELA10M7FA00/GA00/HA00, and it obtains high selectivity with low loss. There is little dispersion of amplitude and

3. All products are inspected for symmetry and roundness of amplitude characteristics, and the flatness of G. D. T. characteristics.

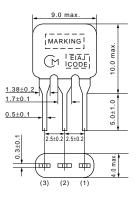

can be obtained.

CERAFIL® Three-Elements Type SFTLA Series

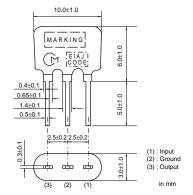

SFTLA10M7 series for FM-receivers are monolithic type ceramic filters which use the energy trapped thickness vibration-mode of the piezoelectric ceramic.

■ Features

- It has an excellent shape factor, and it is possible to obtain 1.5 times more excellent selectivity than SFELA10M7 series (by detuning +-300 or 400kHz).
- 2. Good performance of spurious suppression.
- 3. Having the same terminal pitch as the SFELA10M7 series, it easily replaces that series.
- By replacing two SFELA10M7 series filters with one SFTLA10M7 filter, more compact sets can be made.
- 5. Well-suited for 1-chip ICs.

■ Test Circuit

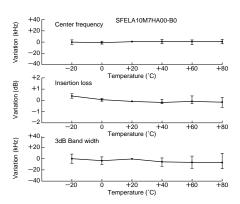

$$\begin{split} Rg + R_1 &= R_2 = 330\Omega \\ C &= 10 pF \text{ (Including stray capacitance and input capacitance of RF voltmeter.)} \end{split}$$

■ Temperature Characteristics

■ Matching Conditions

- •When using ceramic filters, it is most important to match the input/output load to impedance 330 ohm (only SFELA10M7DF00-B0 is 470 ohm matching). Waveform symmetry is damaged when reactance is added to the input/output load.
- •Two ceramic filters directly connected can be used for high selelctivity. For reducing waveform variation, it is recommended to input a buffer AMP between ceramic filters.

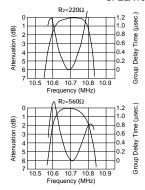

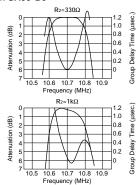

•The SFELA10M7 and SFTLA10M7 series are of input/output symmetric structure so that in theory there is no input/output directionality. Actual circuits may use different input/output loading conditions (for example, mismatched impedance) or capacitance load. In such cases, the waveform will be a little changed by the direction of the input/output of the ceramic filters.

■ Notice (Soldering and Mounting)

The component cannot be withstand washing.

■ Notice (Handling)

- Do not use this product with bend. The component may be damaged if excess mechanical stress is applied to it mounted on the printed circuit board.
- The component may be damaged when an excess stress will be applied.
- 3. All kinds of re-flow soldering must not be applied on the component.
- 4. Do not clean or wash the component as it is not hermetically sealed.
- 5. Do not use strong acidity flux, more than 0.2wt%

- chlorine content, in flow soldering.
- In case of covering discriminator with over coat, conditions such as material of resin, cure temperature, and so on should be evaluated well.
- 7. Accurate test circuit values are required to measure electrical characteristics. It may be a cause of mis-correlation if there is any deviation, especially stray capacitance, from the test circuit in the specification.

Ceramic Filters (CERAFIL®) for FM Receivers

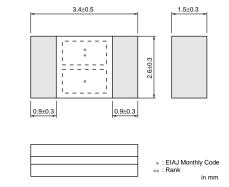

Discriminators Chip Type CDACV Series

CDACV10M7 series forms a resonator on a piezoelectric ceramic substrate. In combination with ICs, this type obtains stable demodulation characteristics in wide bandwidths.

■ Features

- 1. Compact and excellent mechanical strength.
- Can be combined with various ICs. The IC is determined by the last number in the part number.
- 3. Stable demodulation characteristics can be obtained without adjustment.
- 4. The MG type for wide bandwidths and the MC type for narrow bandwidths are available.
- 5. Stable temperature characteristics.
- We recommend kits: ceramic discriminator CDACV10M7 series and "CERAFIL" SFECV10M7 of the same frequency rank.

Chip Type Discriminators CDACV Series Notice

■ Notice (soldering and mounting)

- 1. Standard Reflow Soldering Condition
- (1) Reflow

(2) Soldering Iron

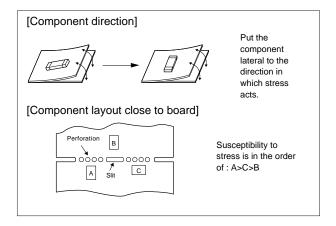

Lead terminal is directly contacted with the tip of soldering iron of 280±5°C for 3.0±0.5 seconds.

2. Wash

The component cannot be withstand washing.

■ Notice (handling)

- The component may be damaged if excess mechanical stress is applied to it mounted on the printed circuit board.
- Design layout of components on the PC board to minimize the stress imposed on the warp or flexure of the board.
- After installing chips, if solder is excessively applied to the circuit board, mechanical stress will cause destruction resistance characteristics to lower. To prevent this, be extremely careful in determining shape and dimension before designing the circuit board diagram.
- 4. When the positioning claws and pick up nozzle are worn, the load is applied to the chip while positioning is concentrated to one positioning accuracy, etc. Careful checking and maintenance are necessary to prevent unexpected trouble.
- 5. When correcting chips with a soldering iron, the tip of the soldering iron should not directly touch the chip component. Depending on the soldering conditions, the effective area of terminations may be reduced. the use of solder containing Ag should be done to prevent the electrode erosion.
- Do not clean or wash the component as it is not hermetically sealed.
- In case of covering discriminator with over coat, conditions such as material of resin, cure temperature, and so on should be evaluated well.
- Accurate test circuit values are required to measure electrical characteristics.
 It may be a cause of mis-correlation if there is any deviation, especially stray capacitance, from the test circuit in the specification.

Ceramic Filters (CERAFIL®) for FM Receivers

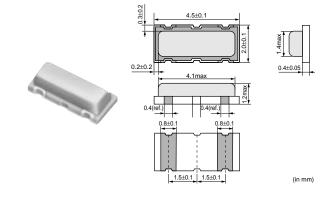

Discriminators Chip Low-profile Type CDSCA Series

CDSCA10M7 series forms a resonator on a piezo electric ceramic sabstrate. In combination with ICs, this type obtains stable demoduration characteristics in wide bandwidth.

■ Features

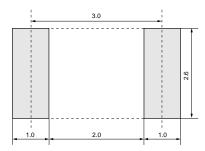

- 1. Compact and high reliability and recommended for automotive applications.
- Can be combined with various ICs. The IC is determined by the last number in the part number.
- 3. Stable demoduration characteristics can be obtained without adjustment.
- 4. Stable temperature characteristics.
- 5. Recommended for Pb free soldering.

| Part Number | Center Frequency (fo) (MHz) | Recovered Audio 3dB BW (kHz) | Recovered Audio Output (mV) | Distortion (%) | IC | Detection Method |

⚠ Note:

1. Export Control

(For customers outside Japan)

Murata products should not be used or sold for use in the development, production, stockpiling or utilization of any conventional weapons or mass-destructive weapons (nuclear weapons, chemical or biological weapons, or missiles), or any other weapons.

⟨For customers in Japan⟩

For products which are controlled items subject to the "Foreign Exchange and Foreign Trade Law" of Japan, the export license specified by the law is required for export.

- Please contact our sales representatives or product engineers before using our products listed in this catalog for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property, or when intending to use one of our products for other applications than specified in this catalog.
 - 1 Aircraft equipment
 - ② Aerospace equipment
 - ③ Undersea equipment
 - 4 Power plant equipment
 - Medical equipment
 - (6) Transportation equipment (vehicles, trains, ships, etc.)
 - 7 Traffic signal equipment
 - ® Disaster prevention / crime prevention equipment
 - 9 Data-processing equipment
 - Application of similar complexity and/or reliability requirements to the applications listed in the above
- 3. Product specifications in this catalog are as of May 2001. They are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before your ordering. If there are any questions, please contact our sales representatives or product engineers
- 4. Please read CAUTION and Notice in this catalog for safety. This catalog has only typical specifications. Therefore you are requested to approve our product specification or to transact the approval sheet for product specification, before your ordering.
- 5. Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or third party's intellectual property rights and other related rights in consideration of your using our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.
- 6. None of ozone depleting substances (ODS) under the Montreal Protocol is used in manufacturing process of us.
