Note 1：The＂Absolute Maximum Ratings＂are those values beyond which the safety of the device cannot be guaranteed．The device should not be operated at these limits．The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings． The＂Recommended Operating Conditions＂table will define the conditions for actual device operation．

Note 2：The input and output negative voltage ratings may be exceeded if
the input and output diode current ratings are observed．
Note 3：Unused inputs must be held HIGH or LOW．They may not float．

LIFE SUPPORT POLICY
FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
