

Typical units

FEATURES

- Lowest cost! Highest reliability!
- 100% SMT-on-pcb, including magnetics
- 100% automatically assembled
- Standard "DIP" package and pinouts
- Fully isolated, 1000Vdc guaranteed
- ± 5 , ± 12 or ± 15 Volt outputs
- Choice of 3 wide-range inputs:
 - 4.5-9 Volts
 - 9-18 Volts
 - 18-72 Volts
- Guaranteed efficiencies to 75%
- -40 to +75°C full-power operation
- Internal input/output filtering
- UL1950/C22.2 No. 950/IEC950-1 certified
- Modifications and customs for OEM's

PRODUCT OVERVIEW

Rarely, has a Series of low-power DC/DC converters been defined by both low cost and Murata's quality and reliability. Our new BST Series of dual-output 3W DC/DC's achieves this "best-of-both-worlds" status by implementing a proven circuit architecture (170-200kHz flyback design) as a full, SMT-on-pcb assembly (including surface-mount magnetics) that is truly 100% automatically assembled. Packaged in miniature 1.25" x 0.8", DIP-like plastic packages (UL94V-0 rated) and requiring no external components, BST Series DC/DC's bring true component-like convenience to designers of today's distributed power systems.

Output voltages are ± 5 , ± 12 or ± 15 Volts. Input voltage ranges are 4.5-9V ("D5" models), 9-18V ("D12" models) or an ultra-wide 18-72V ("D48" models). BST DC/DC's are fully isolated (1000Vdc guaranteed) and include input (pi type) and output filters within their package. Output transient response

is a quick 200 μ sec, while output ripple and noise are typically 75mVp-p.

These rugged modules are fully encapsulated with a thermally conductive potting compound that contributes to their outstanding moisture/vibration resistance and impressive MTBF. They operate over the full -40 to +75°C temperature range without derating. All models have been thoroughly characterized (electrically, mechanically and thermally), qualified (including HALT), and EMI/EMC tested. Additionally, they are certified to UL1950, CSA 22.2 No. 950 and IEC950.

Murata's BST Model 3W DC/DC's are excellent selections for telecom/datacom, computer and process-control applications demanding small size, low cost and high reliability. If required, their design "flexibility" allows for easy modification to your application-specific requirements.

Typical topology is shown.

Performance/Functional Specifications

Typical @ T_A = +25°C under nominal line voltage and full-load conditions unless noted. ①

| Input | |
|--|---|
| Input Voltage Range: | |
| "D5" Models | 4.5-9 Volts (5V nominal) |
| "D12" Models | 9-18 Volts (12V nominal) |
| "D48" Models | 18-72 Volts (48V nominal) |
| Input Current | See Ordering Guide |
| Input Filter Type ② | Pi |
| Reverse-Polarity Protection | Yes (Instantaneous, 2A maximum) |
| Output | |
| V_{OUT} Accuracy (50% load) | ±1%, maximum |
| Temperature Coefficient | ±0.02% per °C |
| Ripple/Noise (20MHz BW) ② | See Ordering Guide |
| Line/Load Regulation | See Ordering Guide |
| Efficiency | See Ordering Guide |
| Isolation Voltage ③ | 1000Vdc, minimum |
| Short Circuit Protection: ④ | |
| "D5" Models | Power-limiting technique, auto-recovery |
| "D12" and "D48" Models | Hiccup technique, auto-recovery |
| Dynamic Characteristics | |
| Transient Response (50% load step) | 200µsec to ±1.5% of final value |
| Switching Frequency: | |
| "D48" Models | 200kHz |
| "D5" and "D12" Models | 170kHz |
| Environmental | |
| Operating Temperature (Ambient, no derating) | -40 to +75°C |
| Storage Temperature | -55 to +100°C |
| Physical | |
| Dimensions | 1.25" x 0.8" x 0.45" (31.8 x 20.3 x 11.4mm) |
| Case Material | Diallyl phthalate, UL94V-0 rated |
| Pin Material | Gold-plated copper alloy with nickel underplate |
| Weight | 0.5 ounces (14.2 grams) |

- ① These power converters require a minimum 10% loading to maintain specified regulation. Operation under no-load conditions will not damage these devices; however they may not meet all listed specifications.
- ② Application-specific internal input/output filtering can be recommended and perhaps added internally upon request. Contact MPS Applications Engineering for details.
- ③ Devices can be screened or modified for higher guaranteed isolation voltages. Contact MPS Applications Engineering for details.
- ④ The current limit inception point is dependent on the input voltage. Therefore, it is possible to draw current beyond the rated capacity. Users should fully characterize their load conditions.

Absolute Maximum Ratings

| | |
|--|---|
| Input Voltage: | |
| "D5" Models | 12 Volts |
| "D12" Models | 20 Volts |
| "D48" Models | 80 Volts |
| Input Reverse-Polarity Protection | Current must be <2A. Brief duration only. Fusing recommended. |
| Output Overvoltage Protection | None |
| Output Current | Maximum current and short-circuit duration are model dependent. "D12" and "D48" models can withstand sustained output short circuits. |
| Storage Temperature | -55 to +100°C |
| Lead Temperature (soldering, 10 sec.) | +280°C |

These are stress ratings. Exposure of devices to any of these conditions may adversely affect long-term reliability. Proper operation under conditions other than those listed in the Performance/Functional Specifications Table is not implied.

TECHNICAL NOTES

Floating Outputs

Since these are isolated DC/DC converters, their outputs are "floating." Any BST model may be configured to produce an output of 10V, 24V or 30V (for ±5V, ±12V or ±15V models, respectively) by applying the load across the +Output (pin 6) and -Output (pin 8), with either output grounded. The Common (pins 5 and 7) should be left open. Minimum 20% loading is recommended under these conditions.

Filtering and Noise Reduction

All BST 3 Watt DC/DC Converters achieve their rated ripple and noise specifications without the use of external input/output capacitors. In critical applications, input/output ripple and noise may be further reduced by installing electrolytic capacitors across the input terminals and/or low-ESR tantalum or electrolytic capacitors across the output terminals. Output capacitors should be connected between their respective output pin (pins 6 and 8) and Common (pins 5 and 7) as shown in Figure 2. The caps should be located as close to the power converters as possible. Typical values are listed in the tables below. In many applications, using values greater than those listed will yield better results.

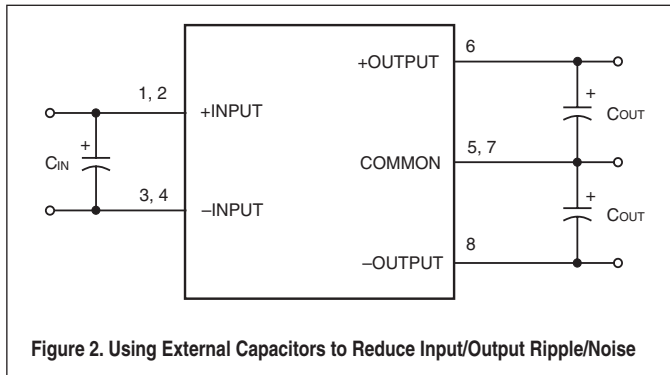

To Reduce Input Ripple

| | |
|--------------|-------------|
| "D5" Models | 47µF, 15V |
| "D12" Models | 10µF, 35V |
| "D48" Models | 4.7µF, 100V |

To Reduce Output Ripple

| | |
|-----------------|--------------------|
| ±5V Outputs | 47µF, 10V, Low ESR |
| ±12/15V Outputs | 22µF, 20V, Low ESR |

In critical, space-sensitive applications, MPS may be able to tailor the internal input/output filtering of these units to meet your specific requirements. Contact our Applications Engineering Group for additional details.

Custom Capabilities

MPS's world-class design, development and manufacturing team stands ready to work with you to deliver the exact power converter you need for your demanding, large volume, OEM applications. And ... we'll do it on time and within budget!

Our experienced applications and design staffs; quick-turn prototype capability; highly automated, SMT assembly facilities; and in-line SPC quality-control techniques combine to give us the unique ability to design and deliver any quantity of power converters to the highest standards of quality and reliability.

We have compiled a large library of DC/DC designs that are currently used in a variety of telecom, medical, computer, railway, aerospace and industrial applications. We may already have the converter you need.

Contact us. Our goal is to provide you the highest-quality, most cost-effective power converters available.

Input Fusing

Certain applications and/or safety agencies may require the installation of fuses at the inputs of power conversion components. For MPS's BST 3 Watt DC/DC Converters, you should use slow-blow type fuses with values no greater than the following:

| V _{IN} Range | Fuse Value |
|-----------------------|------------|
| "D5" | 1.5A |
| "D12" | 1A |
| "D48" | 0.5A |
