

TD74BC541P, TD74BC541F

Octal Bus Buffer with 3-State Outputs (Non-Inverted)

The TD74BC541P/TD74BC541F is a high-speed octal 3-state buffer fabricated with silicon gate Bi-CMOS technology. It achieves the high-speed operation equivalent to the FAST family while maintaining the Bi-CMOS low-power dissipation. The TD74BC541P/F is a non-inverting buffer. It is controlled by two enable inputs ($\overline{OE}0$, $\overline{OE}1$). When either $\overline{OE}0$ and $\overline{OE}1$ are high, all eight outputs are in the high-impedance state, which facilitates the interface with bus lines. All inputs are equipped with resistors and diodes to protect against Electro Static Discharge (ESD).

Features

- High-speed operation $t_{pd} = 4.8 \text{ ns (typ.)}$
- Symmetrical output impedance $I_{OH} = -15 \text{ mA (max)}$
 $I_{OL} = 48 \text{ mA (max)}$
- Low power dissipation $I_{CCD} = 8 \text{ mA (typ.)}$
 $I_{CCZ} = 10 \mu\text{A (typ.)}$
- Operating temperature range $T_a = -40^\circ\text{C to } 85^\circ\text{C}$
- High ESD protection 2000 V (MIL standard)
- Pin and function compatible with FAST (74F541)

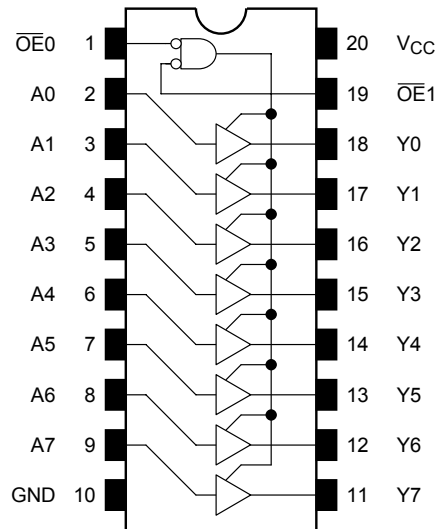

Weight

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
