

10Gb/s surface mount coplanar PIN preamp receiver with integrated MEMS VOA

PTV10GC

The PTV10GC receiver consists of a PIN photodetector, a low-noise preamplifier, a MEMS variable optical attenuator (VOA) and a precision NTC thermistor in a hermetic coplanar package with a connectorized single-mode fiber pigtail. Differential outputs are provided to improve noise rejection for enhanced sensitivity. It has been optimised for use in 10Gb/s metro or long haul applications, either as a discrete device or within a transponder, using NRZ modulation, with or without FEC, at data rates up to 10.709Gb/s.

Features:

- High sensitivity, -18.5dBm typical
- Integrated MEMS VOA extends overload beyond +10dBm
- Low capacitance high speed InGaAs PIN photodetector
- Supports FEC rates up to 10.709Gb/s
- Best in class power consumption, only 350mW
- Designed to exceed the environmental requirements of Telcordia GR-468-CORE
- RoHS 5/6 compliant 

Applications:

- Client or line side links
- DWDM TDM transponder applications
