 Term.W is
RoHS
compliant

RCD's passive delay line series are a lumped constant design incorporating high performance inductors and capacitors in a molded DIP package. Provides stable transmission, low TC, and excellent environmental performance (application handbook avail.).

- Low cost and the industry's widest range, 5-5000nS
- Custom circuits, delay/rise times, impedance available
- Military screening per MIL-PRF-83531 avail
- Option A: low profile package height
- Option G: gull wing lead wires for SM applications

TEST CONDITIONS @25°C

Input test pulse shall have a pulse amplitude of 2.5V, rise time of 2nS, pulse width of 5X total delay. Delay line to be terminated <1% of its characteristic impedance. Delay time measured from 50% of input pulse to 50% of output pulse on leading edge with no loads on output. Rise time measured from 10% to 90% of output pulse.
