## Description

The M/A-COM MASWSS0024 GaAs monolithic switch provides high isolation in a low-cost, plastic surface mount package. The MASWSSO024 is ideal for applications across a broad range of frequencies including synthesizer switching, transmit / receive switching, switch matrices and filter banks in systems such as radio and cellular equipment, PCS, GPS, and fiber optic modules.

M/A-COM fabricates the MASWSSOO24 using a 1.0-micron gate length MESFET process. The process features full chip passivation for performance and reliability.

5. External DC blocking capacitors are required on all RF ports ( 47 pF capacitors are recommended). Use larger value capacitors for lower frequency operation (e.g. use $10,000 \mathrm{pF}$ capacitors to optimize insertion and return loss at frequencies below 50 MHz ).
6. Terminated return loss is governed by blocking capacitors internal to the device; see applications plot.

## Handling Procedures

Please observe the following precautions to avoid damage:

## Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.
