DESCRIPTION

The SS6734G is a 3-pin low-dropout linear regulator with superior characteristics, which include zero base current loss, very low drop-out voltage, and output voltage accuracy of 2%. Typical ground current remains approximately 55μA, for loads ranging from zero to maximum. Dropout voltage at an output current of 300mA is exceptionally low. Built-in output current limiting and thermal limiting provide maximum protection against fault conditions.

The SS6734G is available in SOT-23-3, SOT-89, and TO-92 packages.

Note 2: Guaranteed by design.
Note 3: Regulation is measured at constant junction temperature, using pulse testing with a low ON time.
Note 4: Current limit is measured by pulsing a short time.
Note 5: Dropout voltage is defined as the input to output differential at which the output voltage drops 100mV.
