

STHDMI001A

3.3V, high bandwidth, 2-to-1 high definition multimedia interface (HDMI) switch with single enable

Features

- Compatible with HDMI v1.1 and DVI v1.0 digital interfaces
- Data rate per channel for UXGA: 1.65Gbps
- 165MHz speed operation supports all video formats up to 1080p and SXGA (1280x1024 at 75 Hz)
- Low R_{ON} : 5.5 Ω (typ)
- V_{CC} operating range: 3.0V to 3.6V
- Low current consumption: 20 μ A
- ESD human body model HBM Voltage:
 - \pm 2KV for all I/Os
- Channel ON capacitance: 6pF (typ)
- Switching speed: 9ns
- Near-zero propagation delay: 250ps
- Low crosstalk: -32dB at 825MHz
- Bit-to-bit skew: 200ps
- Very low ground bounce in flow through mode
- Data and control inputs provide an undershoot clamp diode
- Wide bandwidth minimizes skew and jitter
- Hot insertion capable
- Supports bi-directional operation
- Available in the TSSOP48 package
- -40°C to 85°C operating temperature range

Description

The STHDMI001A is a differential Single Pole Double Throw (SPDT) 2-to-1, low R_{ON} , bidirectional HDMI switch. It is designed to support HDMI/DVI television systems that produce superior high-definition image quality. The differential signal from the 2 HDMI ports is multiplexed through the switch to form a single output HDMI channel going to the HDMI receiver, while the deselected output goes to the high-Z (high impedance) state. It is designed for very low cross-talk, low bit-to-bit skew, high channel-to-channel noise isolation, and low I/O capacitance. This switch offers very little high-speed signal attenuation at the outputs, thus preserving the signal integrity necessary to pass stringent interference requirements. STHDMI001A provides the ability to switch a single source output to various display devices or switch video display devices between multiple sources. It reduces the overall BOM costs by eliminating the need for more costly multi input output controllers

Applications

- DVD Players
- Front projectors
- LCD TVs and monitors
- Notebook PCs
- PDPs

1 Summary description

1.1 Functional description

The STHDMI001A routes physical layer signals for high bandwidth digital video and is compatible with low voltage differential signaling standards like Transition Minimized Differential Signaling (TMDS). The device multiplexes differential outputs from a video source to one of the two corresponding outputs, then to a common display. The low ON resistance (R_{ON}) and low I/O capacitance of the STHDMI001A result in a very small propagation delay. The device integrates SPDT-type switches for 3 differential data TMDS channels and 1 differential clock channel.

2 Maximum rating

Stressing the device above the rating listed in the “Absolute Maximum Ratings” table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality documents.

Table 3. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_{CC}	Supply Voltage to Ground	-0.5 to + 4.0	V
V_S	DC Input Voltage	-0.5 to + 4.0	V
V_{IC}	DC Control Input Voltage	-0.5 to + 4.0	V
I_O	DC Output Voltage	120	mA
T_{STG}	Storage Temperature	-65 to 150	°C
T_L	Lead Temperature (10sec)	300	°C

Note: Absolute maximum ratings are those values above which damage to the device may occur. Functional operation under these conditions is not implied. All voltages are referenced to GND.

Note: 1 Valid for Ambient Operating Temperature: T_A = -40 to 85°C; V_{CC} = 3.3V ± 10% (except where noted).

2 Measured by voltage drop between channels at the indicated current through the switch. On-resistance is determined by the lower of the two voltages.

3 Flatness is defined as the difference between the R_{ONMAX} and the R_{ONMIN} of the on resistance over the specified range.

4 ΔR_{ON} measured at the same V_{CC}, temperature and voltage level.

6 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second level interconnect . The category of second Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.
