- All 4 mounting positions should be connected to safety earth.
- The air flow needs to be directed through the power supply within the end application.

Thermal Considerations

In order to ensure safe operation of the PSU in the end-use equipment, the temperature of the components listed in the table below must not be exceeded. See drawing above for component locations. The temperature should be monitored using K type thermocouples placed on the hottest part of the component (out of any direct air flow). See longform datasheet for more information concerning service life.

Component	Max Continuous Temperature °C
TR4 case	110 °C
C14	105 °C
C42	105 °C
