

TOSHIBA Intelligent Power Device
High Voltage Monolithic Silicon Power IC

TPD4123K

The TPD4123K is a DC brush less motor driver using high voltage PWM control. It is fabricated by high voltage SOI process. It is three-shunt resistor circuit for current sensing. It contains level shift high-side driver, low-side driver, IGBT outputs, FRDs and protective functions for under voltage protection circuits and thermal shutdown circuit. It is easy to control a DC brush less motor by just putting logic inputs from a MPU or motor controller to the TPD4123K.

Weight : 3.8 g (typ.)

Features

- High voltage power side and low voltage signal side terminal are separated.
- It is the best for current sensing in three shunt resistance.
- Bootstrap circuit gives simple high-side supply.
- Bootstrap diodes are built in.
- A dead time can be set as a minimum of 1.4 μ s, and it is the best for a Sine-wave from drive.
- 3-phase bridge output using IGBTs.
- FRDs are built in.
- Included over-current and under-voltage protection, and thermal shutdown.
- The regulator of 7V (typ.) is built in.
- Package: 26-pin DIP.

This product has a MOS structure and is sensitive to electrostatic discharge. When handling this product, ensure that the environment is protected against electrostatic discharge.

Marking

Block Diagram

Pin Description

Pin No.	Symbol	Pin Description
1	GND	Ground pin.
2	NC	Unused pin, which is not connected to the chip internally.
3	NC	Unused pin, which is not connected to the chip internally.
4	HU	The control terminal of IGBT by the high side of U. It turns off less than 1.5V. It turns on more than 2.5V.
5	HV	The control terminal of IGBT by the high side of V. It turns off less than 1.5V. It turns on more than 2.5V.
6	HW	The control terminal of IGBT by the high side of W. It turns off less than 1.5V. It turns on more than 2.5V.
7	LU	The control terminal of IGBT by the low side of U. It turns off less than 1.5V. It turns on more than 2.5V.
8	LV	The control terminal of IGBT by the low side of V. It turns off less than 1.5V. It turns on more than 2.5V.
9	LW	The control terminal of IGBT by the low side of W. It turns off less than 1.5V. It turns on more than 2.5V.
10	RS	Over current detection pin.
11	DIAG	With the diagnostic output terminal of open drain , a pull-up is carried out by resistance. It turns on at the time of unusual.
12	NC	Unused pin, which is not connected to the chip internally.
13	V _{REG}	7V regulator output pin.
14	NC	Unused pin, which is not connected to the chip internally.
15	V _{CC}	Control power supply pin. (15V typ.)
16	GND	Ground pin.
17	U	U-phase output pin.
18	BSU	U-phase bootstrap capacitor connecting pin.
19	IS1	U-phase IGBT emitter and FRD anode pin.
20	IS2	V-phase IGBT emitter and FRD anode pin.
21	BSV	V-phase bootstrap capacitor connecting pin.
22	V	V-phase output pin.
23	V _{BB}	High-voltage power supply input pin.
24	BSW	W-phase bootstrap capacitor connecting pin.
25	W	W-phase output pin.
26	IS3	W-phase IGBT emitter and FRD anode pin.

Absolute Maximum Ratings (Ta = 25°C)

Characteristics	Symbol	Rating	Unit
Power supply voltage	V _{BB}	500	V
	V _{CC}	18	V
Output current (DC)	I _{OUT}	1	A
Output current (pulse)	I _{OUTp}	2	A
Input voltage	V _{IN}	-0.5 to 7	V
V _{REG} current	I _{REG}	50	mA
Power dissipation (Tc = 25°C)	P _C	23	W
Operating temperature	T _{jopr}	-40 to 135	°C
Junction temperature	T _j	150	°C
Storage temperature	T _{stg}	-55 to 150	°C

Note: Using continuously under heavy loads (e.g. the application of high temperature/current/voltage and the significant change in temperature, etc.) may cause this product to decrease in the reliability significantly even if the operating conditions (i.e. operating temperature/current/voltage, etc.) are within the absolute maximum ratings and the operating ranges.

Please design the appropriate reliability upon reviewing the Toshiba Semiconductor Reliability Handbook ("Handling Precautions"/"Derating Concept and Methods") and individual reliability data (i.e. reliability test report and estimated failure rate, etc).

Electrical Characteristics (Ta = 25°C)

Characteristics	Symbol	Test Condition	Min	Typ.	Max	Unit
Operating power supply voltage	V_{BB}	—	50	280	450	V
	V_{CC}	—	13.5	15	16.5	
Current dissipation	I_{BB}	$V_{BB} = 450\text{ V}$	—	—	0.5	mA
	I_{CC}	$V_{CC} = 15\text{ V}$	—	0.9	5	
	$I_{BS (ON)}$	$V_{BS} = 15\text{ V}$, high side ON	—	230	410	μA
	$I_{BS (OFF)}$	$V_{BS} = 15\text{ V}$, high side OFF	—	200	370	
Input voltage	V_{IH}	$V_{IN} = \text{"H"}$, $V_{CC} = 15\text{ V}$	2.5	—	—	V
	V_{IL}	$V_{IN} = \text{"L"}$, $V_{CC} = 15\text{ V}$	—	—	1.5	
Input current	I_{IH}	$V_{IN} = 5\text{ V}$	—	—	150	μA
	I_{IL}	$V_{IN} = 0\text{ V}$	—	—	100	
Output saturation voltage	V_{CEsatH}	$V_{CC} = 15\text{ V}$, $I_C = 0.5\text{ A}$, high side	—	2.4	3	V
	V_{CEsatL}	$V_{CC} = 15\text{ V}$, $I_C = 0.5\text{ A}$, low side	—	2.4	3	
FRD forward voltage	V_{FH}	$I_F = 0.5\text{ A}$, high side	—	1.5	2.0	V
	V_{FL}	$I_F = 0.5\text{ A}$, low side	—	1.5	2.0	
BSD forward voltage	$V_F (BSD)$	$I_F = 500\ \mu\text{A}$	—	0.9	1.2	V
Regulator voltage	V_{REG}	$V_{CC} = 15\text{ V}$, $I_O = 30\text{ mA}$	6.5	7	7.5	V
Current limiting voltage	V_R	—	0.46	0.5	0.54	V
Current limiting dead time	Dt	—	2.3	3.3	4.4	μs
Thermal shutdown temperature	TSD	$V_{CC} = 15\text{ V}$	135	—	185	$^{\circ}\text{C}$
Thermal shutdown hysteresis	ΔTSD	$V_{CC} = 15\text{ V}$	—	50	—	$^{\circ}\text{C}$
V_{CC} under voltage protection	V_{CCUVD}	—	10	11	12	V
V_{CC} under voltage protection recovery	V_{CCUVR}	—	10.5	11.5	12.5	V
V_{BS} under voltage protection	V_{BSUVD}	—	8	9	9.5	V
V_{BS} under voltage protection recovery	V_{BSUVR}	—	8.5	9.5	10.5	V
DIAG saturation voltage	$V_{DIAGsat}$	$I_{DIAG} = 5\text{ mA}$	—	—	0.5	V
Output on delay time	t_{on}	$V_{BB} = 280\text{ V}$, $V_{CC} = 15\text{ V}$, $I_C = 0.5\text{ A}$	—	1.4	3	μs
Output off delay time	t_{off}	$V_{BB} = 280\text{ V}$, $V_{CC} = 15\text{ V}$, $I_C = 0.5\text{ A}$	—	1.0	3	μs
Dead time	t_{dead}	$V_{BB} = 280\text{ V}$, $V_{CC} = 15\text{ V}$, $I_C = 0.5\text{ A}$	1.4	—	—	μs
FRD reverse recovery time	t_{rr}	$V_{BB} = 280\text{ V}$, $V_{CC} = 15\text{ V}$, $I_C = 0.5\text{ A}$	—	200	—	ns

External Parts

Typical external parts are shown in the following table.

Part	Typical	Purpose	Remarks
C ₁ , C ₂ , C ₃	25 V/2.2 μF	Bootstrap capacitor	(Note 1)
R ₁	0.62 Ω ± 1 % (1 W)	Current detection	(Note 2)
C ₄	25 V/10 μF	V _{CC} power supply stability	(Note 3)
C ₅	25 V /0.1 μF	V _{CC} for surge absorber	(Note 3)
C ₆	25 V/1 μF	V _{REG} power supply stability	(Note 3)
C ₇	25 V/1000 pF	V _{REG} for surge absorber	(Note 3)
R ₂	5.1 kΩ	DIAG pull-up resistor	(Note 4)

Note 1: The required bootstrap capacitance value varies according to the motor drive conditions. The capacitor is biased by V_{CC} and must be sufficiently derated for it.

Note 2: The following formula shows the detection current: $I_O = V_R \div R_1$ (For $V_R = 0.5$ V)
Do not exceed a detection current of 1 A when using this product.
(Please go from the outside in the over current protection.)

Note 3: When using this product, adjustment is required in accordance with the use environment. When mounting, place as close to the base of this product leads as possible to improve the ripple and noise elimination.

Note 4: The DIAG pin is open drain. If not using the DIAG pin, connect to the GND.

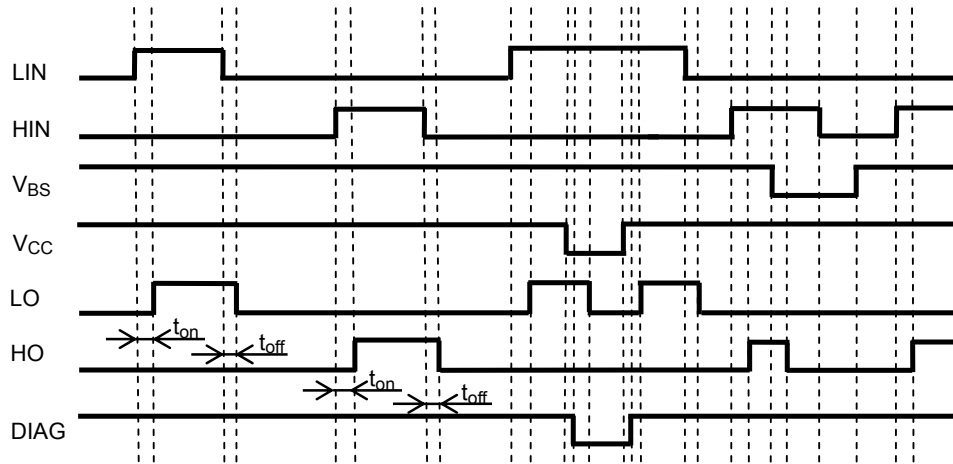

Handling precautions

- (1) Please control the input signal in the state to which the V_{CC} voltage is steady. Both of the order of the V_{BB} power supply and the V_{CC} power supply are not cared about either.
Note that if the power supply is switched off as described above, this product may be destroyed if the current regeneration route to the V_{BB} power supply is blocked when the V_{BB} line is disconnected by a relay or similar while the motor is still running.
- (2) The RS pin connecting the current detection resistor is connected to a comparator in the IC and also functions as a sensor pin for detecting over current. As a result, over voltage caused by a surge voltage, for example, may destroy the circuit. Accordingly, be careful of handling the IC or of surge voltage in its application environment.

Description of Protection Function

- (1) Over-current protection
 This product incorporates a over-current protection circuit to protect itself against over-current at startup or when a motor is locked. This protection function detects voltage generated in the current detection resistor connected to the RS pin. When this voltage exceeds $V_R (=0.5\text{ V typ.})$, the IGBT output, which is on, temporarily shuts down after a dead time , preventing any additional current from flowing to this product. The next all “L” signal releases the shutdown state.
- (2) Under voltage protection
 This product incorporates under voltage protection circuits to prevent the IGBT from operating in unsaturated mode when the V_{CC} voltage or the V_{BS} voltage drops.
 When the V_{CC} power supply falls to this product internal setting $V_{CCUVD} (=11\text{ V typ.})$, all IGBT outputs shut down regardless of the input. This protection function has hysteresis. When the V_{CC} power supply reaches 0.5 V higher than the shutdown voltage ($V_{CCUVR} (=11.5\text{ V typ.})$), this product is automatically restored and the IGBT is turned on again by the input. DIAG output is reversed at the time of V_{CC} under-voltage protection. When the V_{CC} power supply is less than 7 V, DIAG output isn't sometimes reversed.
 When the V_{BS} supply voltage drops $V_{BSUVD} (=9\text{ V typ.})$, the high-side IGBT output shuts down.
 When the V_{BS} supply voltage reaches 0.5 V higher than the shutdown voltage ($V_{BSUVR} (=9.5\text{ V typ.})$), the IGBT is turned on again by the input signal.
- (3) Thermal shutdown
 This product incorporates a thermal shutdown circuit to protect itself against the abnormal state when its temperature rises excessively.
 When the temperature of this chip rises to the internal setting TSD due to external causes or internal heat generation , all IGBT outputs shut down regardless of the input. This protection function has hysteresis $\Delta TSD (=50^\circ\text{C typ.})$. When the chip temperature falls to $TSD - \Delta TSD$, the chip is automatically restored and the IGBT is turned on again by the input.
 Because the chip contains just one temperature detection location, when the chip heats up due to the IGBT, for example, the differences in distance from the detection location in the IGBT (the source of the heat) cause differences in the time taken for shutdown to occur. Therefore, the temperature of the chip may rise higher than the thermal shutdown temperature when the circuit started to operate.

Timing Chart of Under voltage protection

Note: The above timing chart is considering the delay time

Safe Operating Area

Figure 1 SOA at $T_j = 135^\circ\text{C}$

Note 1: The above safe operating areas are $T_j = 135^\circ\text{C}$ (Figure 1).

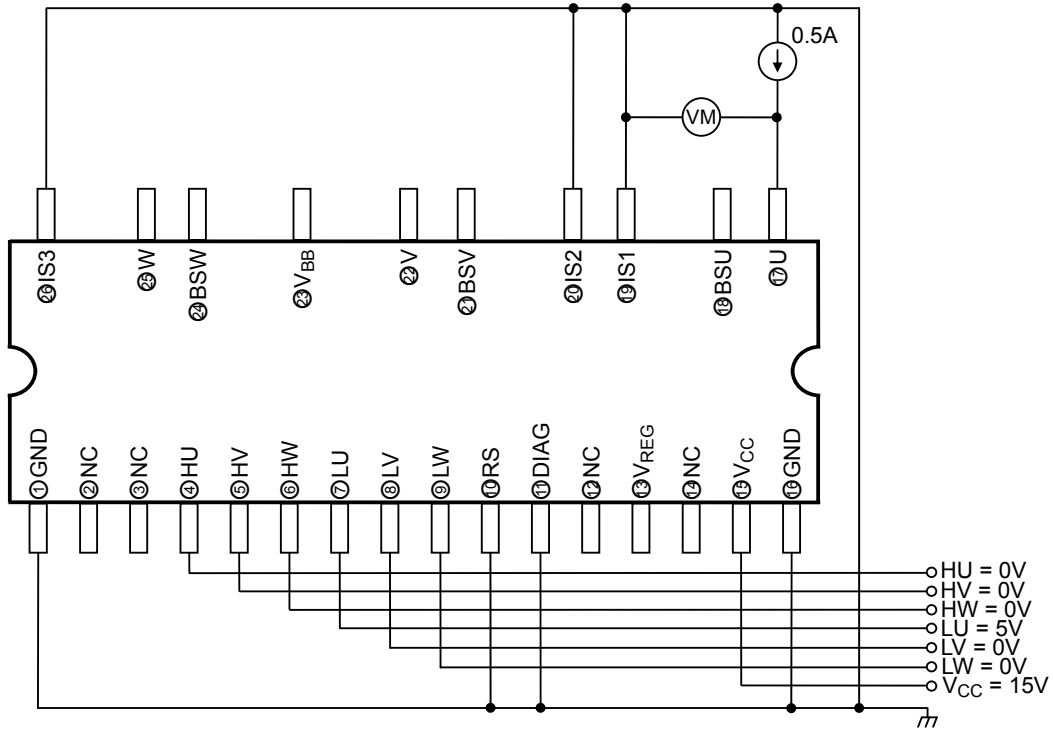

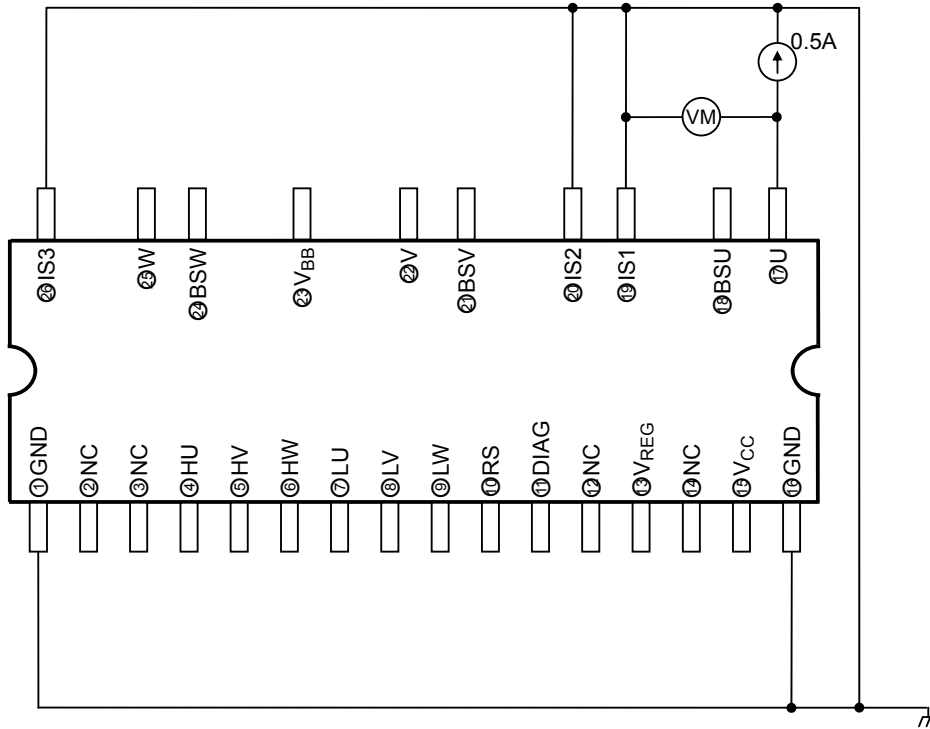

Test Circuits

IGBT Saturation Voltage (U-phase low side)

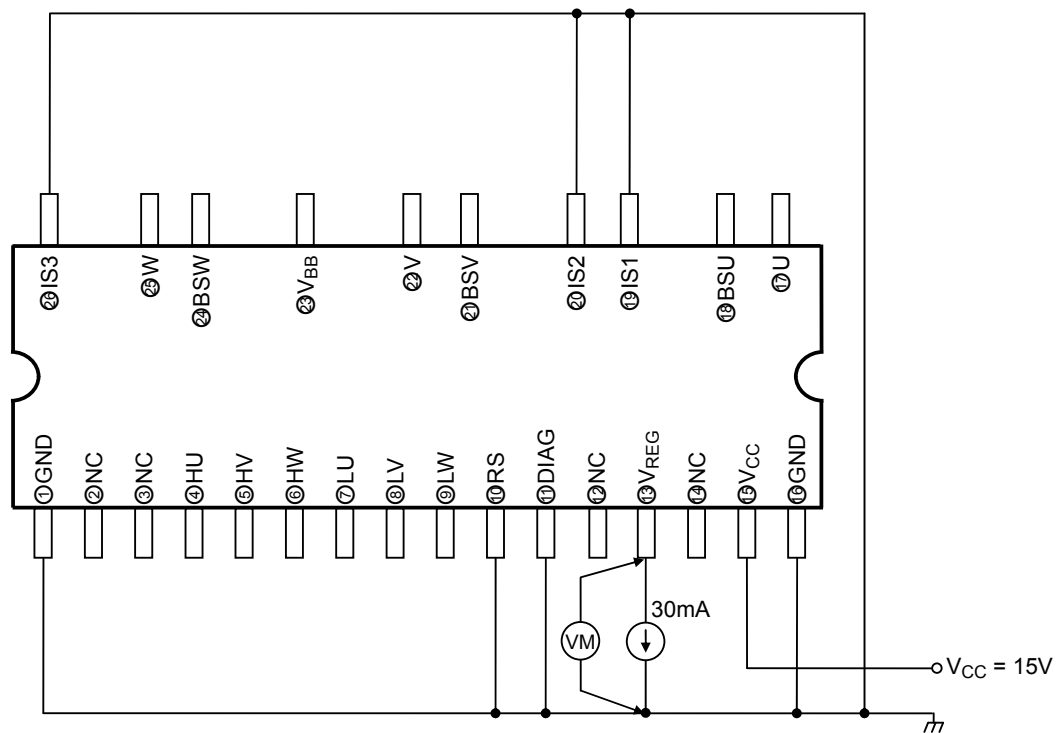

FRD Forward Voltage (U-phase low side)

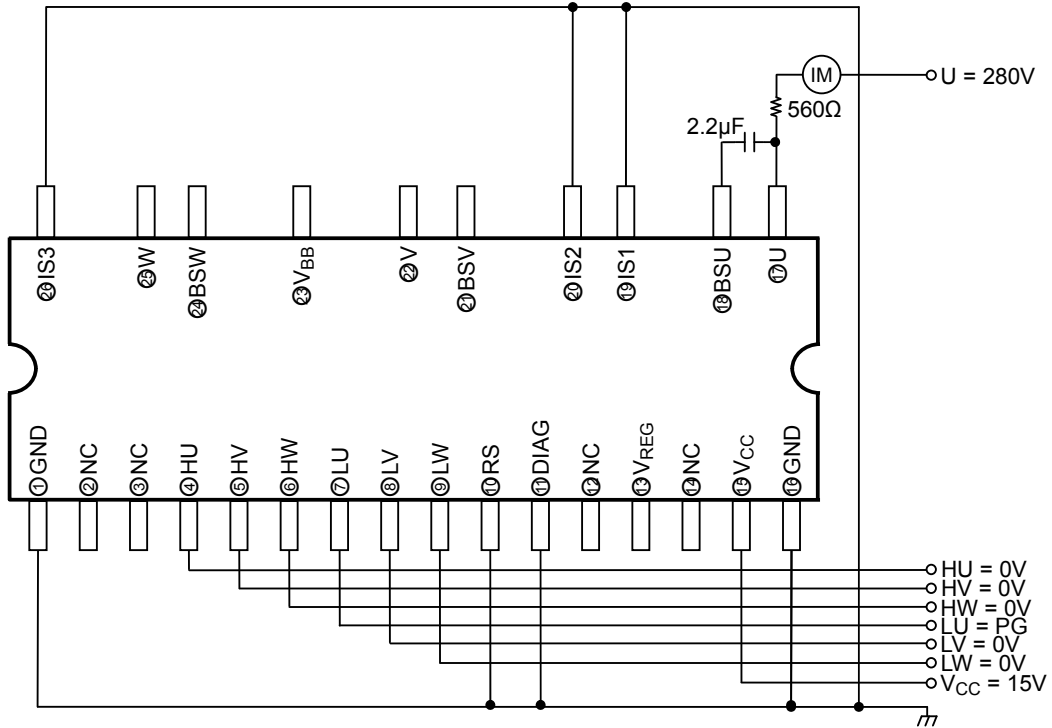

V_{CC} Current Dissipation

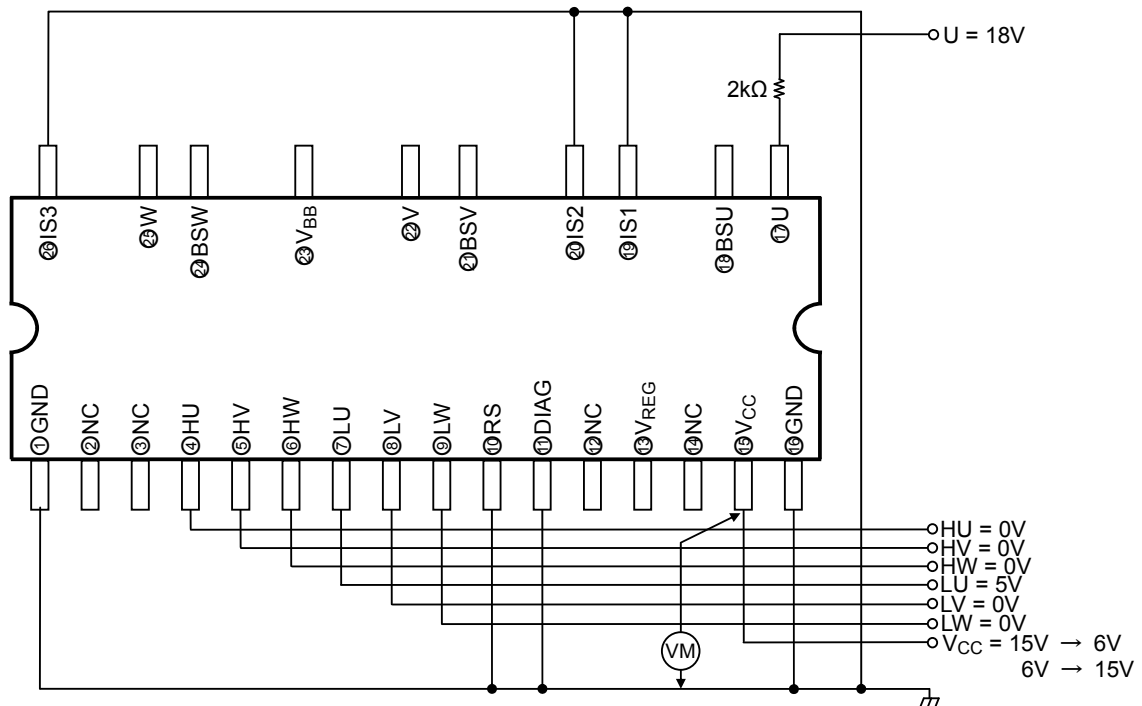

Regulator Voltage

Output ON/OFF Delay Time (U-phase low side)

V_{CC} Under-voltage Protection Operating/Recovery Voltage (U-phase low side)

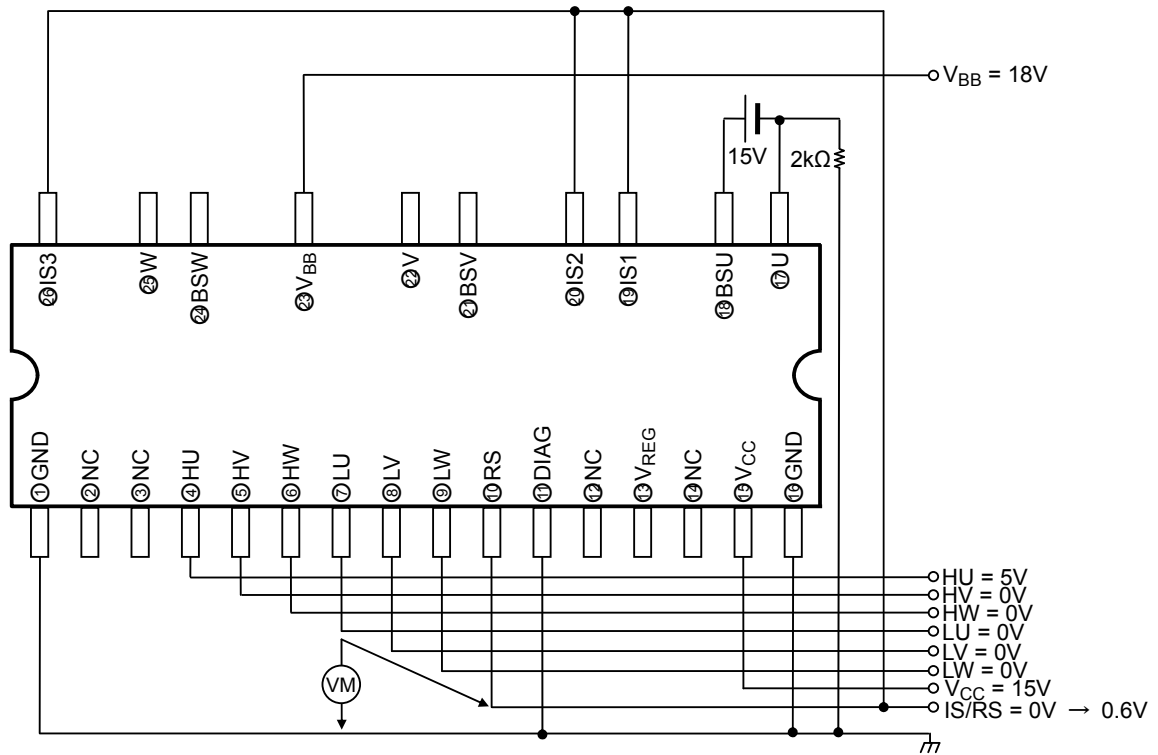

*Note: Sweeps the V_{CC} pin voltage from 15 V and monitors the U pin voltage. The V_{CC} pin voltage when output is off defines the under-voltage protection operating voltage. Also sweeps from 6 V to increase. The V_{CC} pin voltage when output is on defines the under voltage protection recovery voltage.

V_{BS} Under-voltage Protection Operating/Recovery Voltage (U-phase high side)

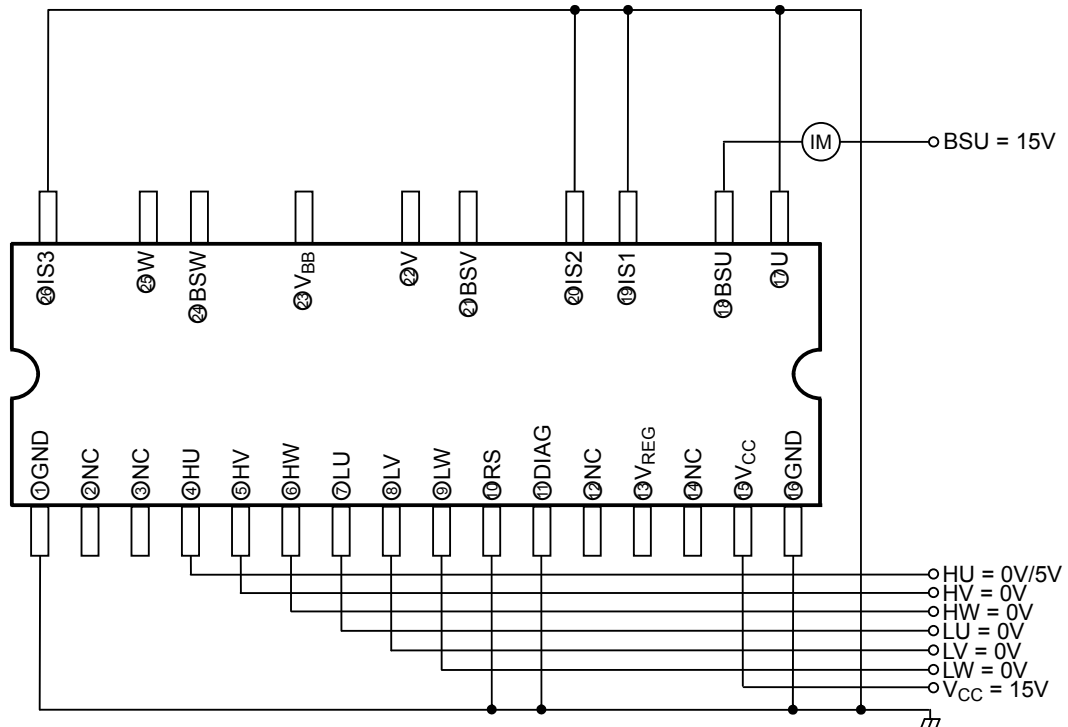

*Note: Sweeps the BSU pin voltage from 15 V to decrease and monitors the VBB pin voltage. The BSU pin voltage when output is off defines the under voltage protection operating voltage. Also sweeps the BSU pin voltage from 6V to increase and change the HU pin voltage at 5 V→0 V→5 V each time. It repeats similarly output is on. When the BSU pin voltage when output is on defines the under voltage protection recovery voltage.

Current Control Operating Voltage (U-phase high side)

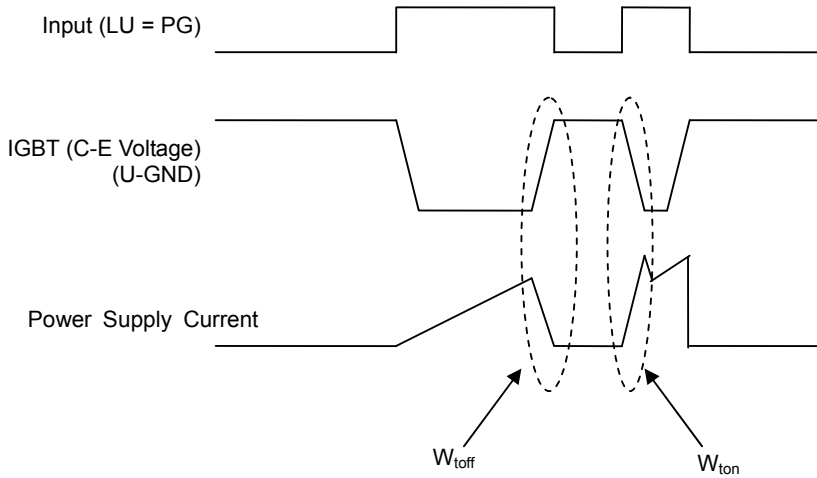

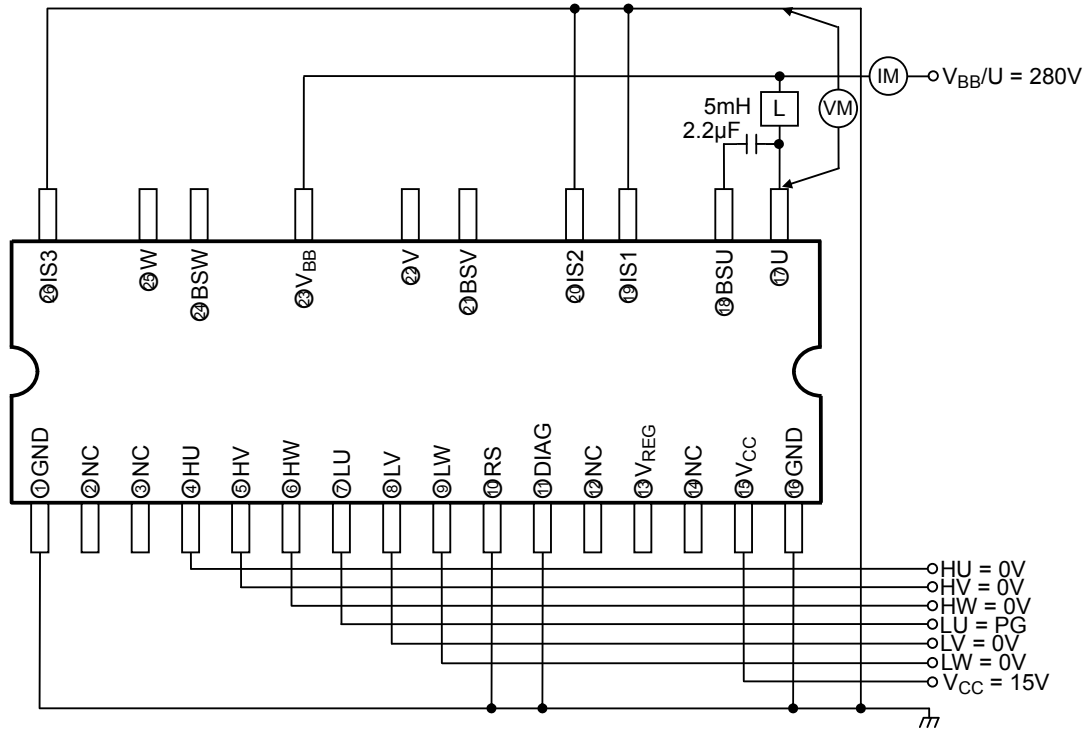

*Note: Sweeps the IS/RS pin voltage and monitors the U pin voltage.
The IS/RS pin voltage when output is off defines the current control operating voltage.

V_{BS} Current Dissipation (U-phase high side)

Turn-On/Off Loss (low side IGBT + high side FRD)

RESTRICTIONS ON PRODUCT USE

20070701-EN GENERAL

- The information contained herein is subject to change without notice.
- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc.
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in his document shall be made at the customer's own risk.
- The products described in this document shall not be used or embedded to any downstream products of which manufacture, use and/or sale are prohibited under any applicable laws and regulations.
- Please contact your sales representative for product-by-product details in this document regarding RoHS compatibility. Please use these products in this document in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances. Toshiba assumes no liability for damage or losses occurring as a result of noncompliance with applicable laws and regulations.
