

Not Recommended for New Designs

This product was manufactured for Maxim by an outside wafer foundry using a process that is no longer available. It is not recommended for new designs. The data sheet remains available for existing users.

A Maxim replacement or an industry second-source may be available. Please see the QuickView data sheet for this part or contact technical support for assistance.

High-Precision, +2.5V Reference

MX580

General Description

The MX580 is a high-performance, three-terminal voltage reference which provides a stable +2.5V source for 8-, 10-, and 12-bit data converters and analog functions. A temperature-compensated internal bandgap operates from 4.5V to 30V and consumes only 1.5mA.

The reference can be connected directly to a number of CMOS analog-to-digital and digital-to-analog converters and is especially convenient in +5V powered systems. An initial untrimmed accuracy of 0.4% and temperature stability of 10ppm/°C allow adjustment-free designs in many precision applications.

Available packages include TO-52 metal cans for commercial and military temperature grades, as well as 8-pin SO packages for commercial grade devices.

Applications

- CMOS Data Conversion
- Digital Panel Meters
- Portable Instrumentation
- Remote Measurement Systems
- Logic-Powered Analog Systems

Features

- ◆ 2.500V ±0.4% Accuracy (MX580L/M)
- ◆ 10ppm/°C Temperature Stability (MX580M)
- ◆ No Adjustments
- ◆ 250µV Long-Term Stability
- ◆ 1.5mA Quiescent Current
- ◆ 4.5V to 30V Operation

Note 1: Absolute maximum power dissipation must not be exceeded.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
