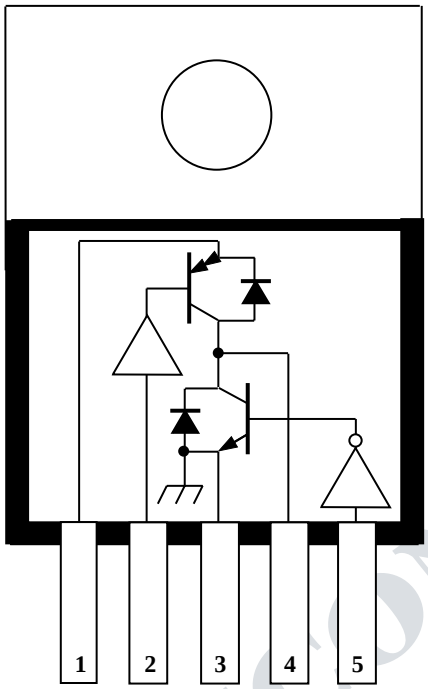
HIGH-CURRENT HALF-BRIDGE MOTOR DRIVER



Dwg. PP-022-1

ABSOLUTE MAXIMUM RATINGS

Supply Voltage, Range V_S .... **8.5 V to 35 V***
Output Voltage, $V_{CE(sus)}$ ..... **24 V**
Input Voltage Range, V_{IN} .... **-0.3 V to +18 V**
Continuous Output Current, I_{OUT} ..... **±1.0 A**
Package Power Dissipation,
P_D ..... **See Graph**
Operating Temperature Range,
T_A ..... **-20°C to +85°C**
Storage Temperature Range,
T_S ..... **-55°C to +150°C**

*Internal high-voltage shutdown above 24 V.

Designed for use as a general-purpose motor driver, the UDN2943Z half-bridge driver combines high-current sink and source drivers with logic stages, level shifting, diode transient protection, and a voltage regulator for single-supply operation. Capable of operating in extremely harsh environments, this device can withstand high ambient temperatures, output overloads, and repeated power supply transient voltages without damage. The driver can be used in pairs for full-bridge operation, or as triplets in three-phase brushless dc motor-drive applications.

The input circuitry is compatible with TTL, low-voltage CMOS, and NMOS logic. Logic lockout prevents both source and sink drivers from turning ON simultaneously. Each driver is turned ON by an active-low input, making the UDN2943Z especially desirable in many micro-processor applications. An accidental input open circuit will turn OFF the corresponding output. The device also provides an internally-generated dead time to prevent crossover currents during output switching. Monolithic, space-saving construction offers reliability unobtainable with discrete components.

Saturated output drivers provide for low saturation voltage at the maximum rated current. Internal short-circuit protection, activated at load currents above 1 A, protects the source driver from accidental short-circuits between the output and ground.

The UDN2943Z driver is rated for continuous operation with inductive loads at supply voltages of up to 24 V. With supply voltage transients (to 35 V maximum), a high-voltage protection circuit becomes operative, shutting OFF both output drivers. The internal thermal shutdown is triggered by a nominal junction temperature of 160°C.

Single-chip construction and a 5-lead power-tab TS-001 plastic package provide cost-effective and reliable systems designs. It also features excellent power dissipation ratings, minimum size, and ease of installation. The heat-sink tab is at ground potential and does not require insulation.

FEATURES

- ±1 A Output Current
- Saturated Output Drivers
- Logic-Compatible Inputs
- Output-Transient Protection
- Tri-State Output
- 8.5 V to 24 V Operating Range
- Crossover-Current Protected
- Withstands 35 V Supply Transients
- Internal Over-Voltage Protection
- Internal Short-Circuit Protection

Always order by complete part number: **UDQ2943Z** .
