CYWUSB6941

# WirelessUSB™ EX Radio

## 1.0 Features

The Cypress CYWUSB6941 WirelessUSB™ EX radio transceiver is designed to work with the Cypress CYWUSB6942 WirelessUSB EX baseband controller to provide a complete WirelessUSB EX solution. The CYWUSB6941 contains a 2.4-GHz radio transceiver, a GFSK modem, and a radio control interface that communicates with the CYWUSB6942.

- Typically requires only eight external components for ease of implementation and manufacturing
- -6-dBm (typical) transmit power for a transmission range of up to 10 meters
- -82-dBm (typical) receive sensitivity
- Provides low-power operating modes to conserve battery life
- 2.7V to 3.6V operation
- 7 x 5 x 1.2 mm 42-pin FBGA package

## 2.0 Applications

The CYWUSB6941 is targeted for the following Human Input Device (HID) applications:

- Mice
- Keyboards
- Joysticks/Gamepads.

### 3.0 Functional Overview

The Cypress CYWUSB6941 WirelessUSB EX transceiver is designed to work with the Cypress CYWUSB6942 WirelessUSB EX baseband controller to provide a complete WirelessUSB EX solution. The CYWUSB6941 contains a 2.4-GHz radio transceiver, a GFSK modem, and a radio control interface that communicates with the CYWUSB6942 WirelessUSB EX baseband. The CYWUSB6941 also facilitates the development of a complete WirelessUSB EX system with a minimum number of additional components, typically requiring only eight external components (including crystal) for ease of implementation and manufacturing (refer to *Figure 3-1*). Specific features include:

- 2.4-GHz frequency-hopping spread spectrum (FHSS) transceiver
- GFSK modulator/demodulator
- No external transmit/receive switch required
  - Minimizes the need for external components
- Closed-loop phase-locked loop (PLL)
  - VCO is integrated in the CYWUSB6941
  - No external loop circuitry required
- Radio control interface.

#### 3.1 2.4-GHz Radio Transceiver and GFSK Modem

The receiver is a low-IF architecture with fully integrated IF filters to achieve high performance in the presence of interference. The FM demodulator and fast data slicer are fully integrated.

The hop frequency synthesizer provides the frequency-hopping local oscillator for the transmitter and receiver. The only external components required are reference crystal, and several capacitors. The RF VCO is fully integrated, requiring no external tank circuits.

The transmitter uses a DSP-based vector modulator to convert the transmit data to an accurate GFSK-modulated carrier. There are a variety of DC power control features for transmitter, synthesizer, and receiver functions to optimize the average current drain.

#### 3.2 Clocking

The CYWUSB6941 requires an external 13-MHz crystal with the following characteristics:

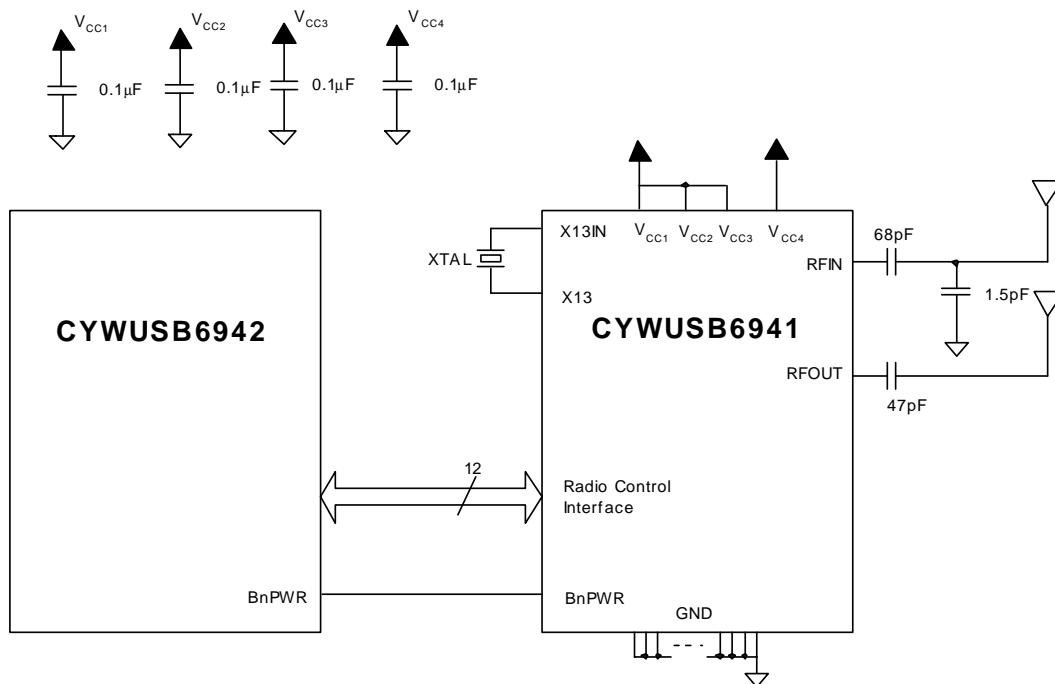

- Crystal temperature stability:  $\pm 15$  ppm max
- Crystal load capacitance: 10 – 15 pF.

The crystal has to be placed across the X13IN and X13 pins. No extra capacitors are needed.

### 3.3 Application Examples

#### 3.3.1 Application Example with the CYWUSB6942

Figure 3-1 shows an application example with external components.<sup>[1]</sup>

**Figure 3-1. CYWUSB6941 Application Example with External Components**

**Note:**

1. The matching network components between the RFIN, and RFOUT are chosen based on the usage of a four-layer FR4 PCB (part number PCD-9100). See application notes for additional details on board layout requirements. See application notes for RF critical design considerations.

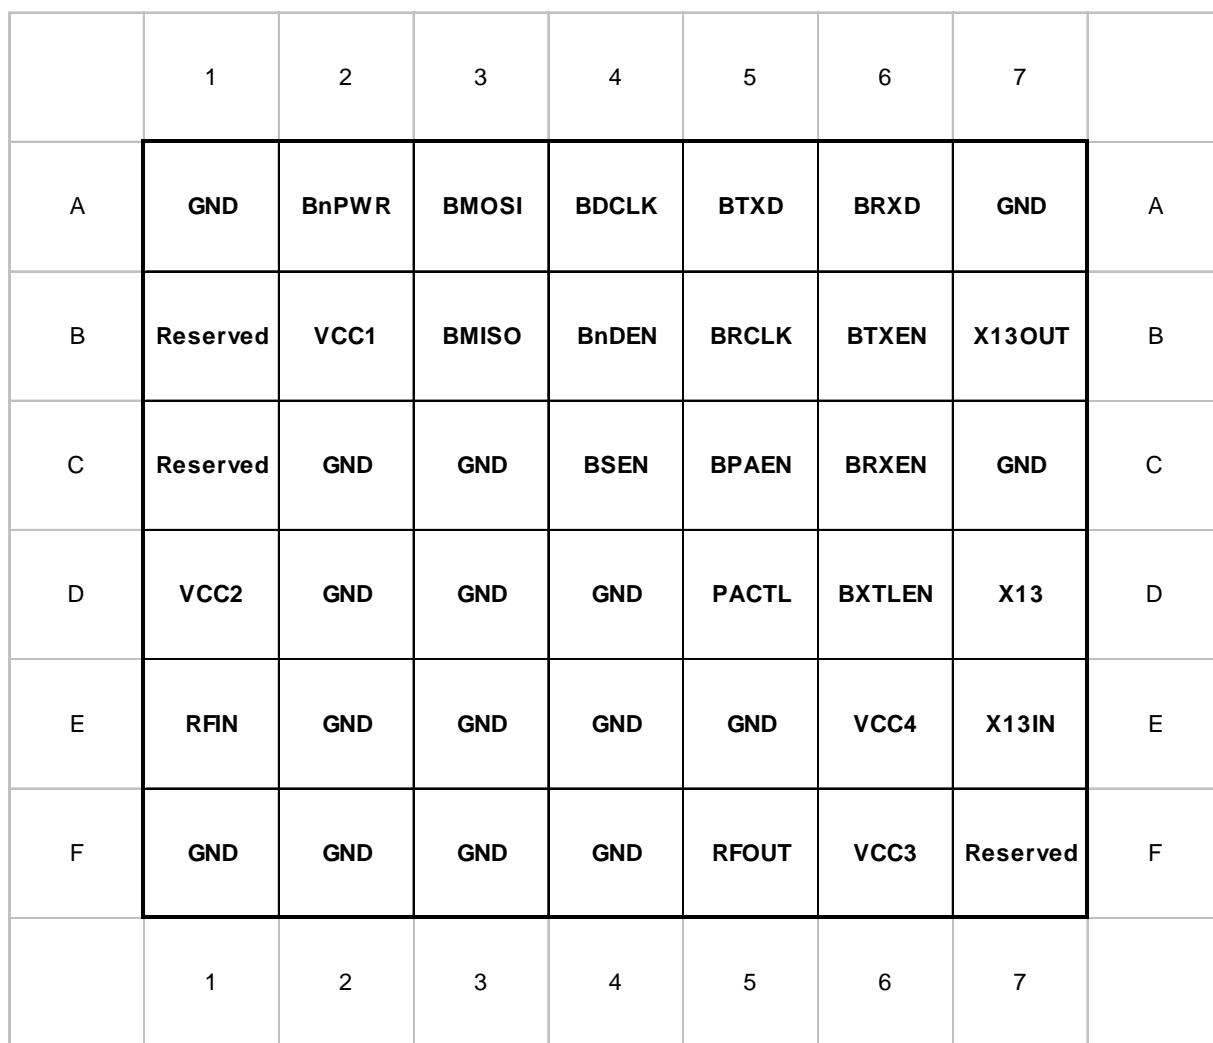

## 4.0 Pin Description

**Table 4-1. Pin Description Table for the CYWUSB6941**

Ball	Name	Type	Default	Description
<b>RF Pins</b>				
E1	RFIN	Input	N/A	<b>Antenna Input.</b> Modulated RF signal received.
F5	RFOUT	Output	N/A	<b>Antenna Output.</b> Modulated RF signal to be transmitted.
<b>Filter/Crystal/Power Control Pins</b>				
D7	X13	Input	N/A	<b>Crystal Differential Input.</b> Input for a differential crystal oscillator.
E7	X13IN	Input	N/A	<b>Crystal Differential Input.</b> Input for a differential crystal oscillator.
B7	X13OUT	Output		<b>System Clock.</b> Buffered 13-MHz system clock.
<b>Radio Control Interface (Data Pins)</b>				
A5	BTXD	Input		<b>Transmit Data.</b> Transmit data input port.
A6	BRXD	Output		<b>Receive Data.</b> Demodulated and sliced digital receive data.
D5	PACTL	Output		<b>Power Amplifier Control.</b> High is an enable for external power amplifier in the transmit mode.
<b>Radio Control Interface (Control Pins)</b>				
B5	BRCLK	Output		<b>Transmit Clock.</b> 1-MHz clock associated with the transmit data.
C5	BPAEN	Input		<b>Power Amplifier Enable.</b> Enables the PA in transmit mode. Active HIGH.
C6	BRXEN	Input		<b>Receive Circuitry Enable.</b> This signal enables the receive circuitry. Active HIGH.
B6	BTXEN	Input		<b>Transmit Circuitry Enable.</b> This signal enables the transmit circuitry. Active HIGH.
C4	BSEN	Input		<b>Synthesizer Enable.</b> This signal enables the hop synthesizer. Active HIGH.
A2	BnPWR	Input		<b>Power-on Reset.</b> This signal is active LOW. Connects to CYWUSB6942 signal BnPWR
D6	BXTLEN	Input		<b>Crystal Oscillator Enable.</b> This signal enables the crystal oscillator. Active HIGH.
<b>Serial Interface Pins</b>				
A3	BMOSI	Input		<b>Input Data.</b> This is the serial data input pin.
B3	BMISO	Output		<b>Output Data.</b> This is the serial data output pin.
A4	BDCLK	Input		<b>Input Clock.</b> This is the serial input clock.
B4	BnDEN	Input		<b>Enable.</b> This signal enables the serial communication.
<b>Power and Ground Pins</b>				
B2	VCC1	V <sub>CC</sub>	H	<b>V<sub>CC</sub> pins for RF and analog baseband signals.</b>
D1	VCC2			
F6	VCC3			
E6	VCC4	V <sub>CC</sub>	H	<b>V<sub>CC</sub> pin for digital signals.</b>
A1	GND	GND	L	<b>Ground pins.</b>

## 5.0 Radio Control Interface

The CYWUSB6941 radio control interface is the communication interface between the CYWUSB6941 transceiver and the CYWUSB6942 WirelessUSB EX baseband. It consists of a data interface and a control interface for transmitting and receiving data, and a serial interface for a control interface from the WirelessUSB baseband CYWUSB6941.

There are two subsections of the interface:

- RF data and control path
- Radio control interface (serial).

Nine signals are used in the RF data and control path, four in the serial radio control interface, and one system clock. All of the signals are unidirectional. Direction is oriented to/from the CYWUSB6941 RF IC.

### 5.1 Radio / Baseband Interface Connections

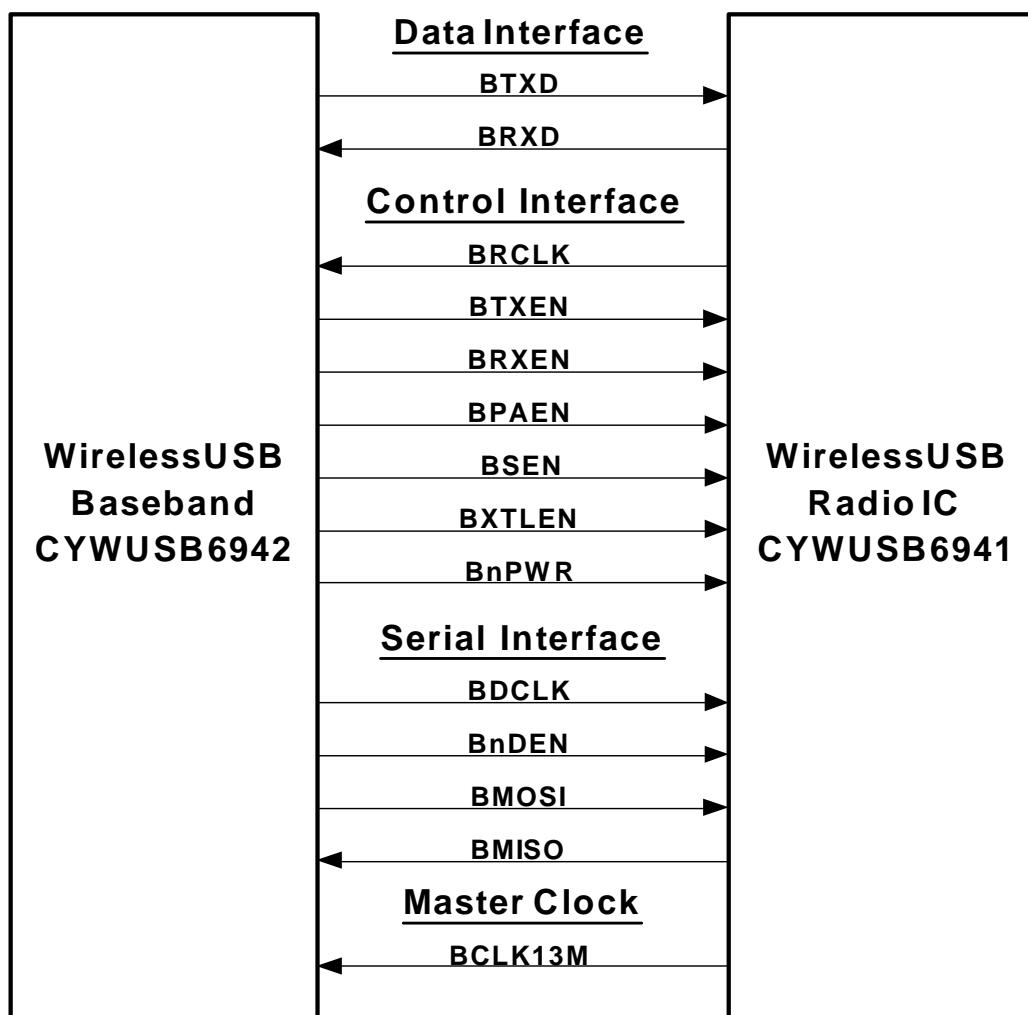

Figure 5-1. CYWUSB6941 Radio/Baseband Interface Diagram

## 6.0 Absolute Maximum Ratings

Storage Temperature .....	.....	-65°C to +150°C
Ambient Temperature with Power Applied .....	.....	0°C to +70°C
Supply Voltage on V <sub>CC</sub> relative to V <sub>SS</sub> .....	.....	-0.3V to +3.9V
DC Input Voltage .....	.....	-0.3V to V <sub>CC</sub> +0.3V
DC Voltage applied to Outputs in High-Z State .....	.....	-0.3V to V <sub>CC</sub> +0.3V
Static Discharge Voltage (Digital) <sup>[2]</sup> .....	[ ]	> 2000 V
Static Discharge Voltage (RF) <sup>[2]</sup> .....	.....	> 500 V
Latch-up Current .....	.....	+200 mA, -200 mA

## 7.0 Operating Conditions

V <sub>CC</sub> (Supply Voltage) .....	.....	2.7V to 3.6V
T <sub>A</sub> (Ambient Temperature Under Bias) .....	.....	0°C to +70°C
Ground Voltage .....	.....	0V
F <sub>Osc</sub> (Oscillator or Crystal Frequency) .....	.....	13 MHz ± 20 ppm

## 8.0 DC Characteristics (Over the Operating Range)

**Table 8-1. DC Parameters**

Parameter	Description	Conditions	Min.	Typ.	Max.	Unit
V <sub>OH</sub>	Output High Voltage	At I <sub>OH</sub> = -2.0 mA	2.4			V
V <sub>OL</sub>	Output Low Voltage	At I <sub>OL</sub> = 2.0 mA			0.4	V
V <sub>IH</sub>	Input High Voltage		2.0		V <sub>CC</sub>	V
V <sub>IL</sub>	Input Low Voltage		-0.3		0.8	V
I <sub>IL</sub>	Input Leakage Current	0 < V <sub>IN</sub> < V <sub>CC</sub>	-1		+1	µA
C <sub>IN</sub>	Pin Input Capacitance (except X13, X13IN, and RFIN)				8	pF
I <sub>Sleep</sub>	Current consumption during sleep mode	BXTLEN = 0		1	10	µA
I <sub>CC</sub> (BXTLEN)	Current consumption when crystal oscillator is enabled and stable	BnPWR = 1 BXTLEN =1		4	6	mA
I <sub>CC</sub> (BSEN)	Current consumption when hop frequency synthesizer is enabled and stable	BXTLEN = 1 BSEN =1		30	40	mA
I <sub>CC</sub> (BRXEN)	Current consumption when receiver circuitry is enabled and stable	BXTLEN = 1 BSEN = 1 BRXEN=1		62	85	mA
I <sub>CC</sub> (BTXEN)	Current consumption when transmit circuitry is enabled and stable	BXTLEN = 1 BSEN = 1 BTXEN =1		45	70	mA
I <sub>CC</sub> (BPAEN)	Current consumption when transmit circuitry and PA are enabled and stable	BXTLEN = 1 BSEN = 1 BTXEN = 1 BPAEN = 1		70	85	mA

**Note:**

2. Rating measured using the Human Body Model (HBM).

## 9.0 Radio Specification

**Table 9-1. Radio Parameters**

Parameter	Description	Conditions	Min.	Typ.	Max.	Unit
	RF Frequency Range		2.402		2.480	GHz
<b>Radio Receiver (T = 25°C , V<sub>CC</sub> = 3.3V)<sup>[3]</sup></b>						
Sensitivity	BER $\leq 10^{-3}$		-82	-74		dBm
Maximum Received Signal	BER $\leq 10^{-3}$	-38	-33			dBm
<b>Interference Performance</b>	BER $\leq 10^{-3}$					
Co-channel Interference rejection Carrier-to-Interference (C/I)	C = -60 dBm		11			dB
Adjacent (1 MHz) channel selectivity C/I 1 MHz	C = -60 dBm		3			dB
Adjacent (2 MHz) channel selectivity C/I 2 MHz	C = -60 dBm		-25			dB
Adjacent ( $\geq 3$ MHz) channel selectivity C/I $\geq 3$ MHz	C = -67 dBm		-35			dB
Image Frequency Interference, C/I Image (+4 MHz)	C = -67 dBm		-20			dB
Adjacent (1 MHz) interference to in-band image frequency, C/I image $\pm 1$ MHz (+3 MHz and +5 MHz)	C = -67 dBm		-30			dB
<b>Out-of-Band Blocking</b>	BER $\leq 10^{-3}$					
<b>Interference Signal Frequency</b>						
30 MHz – 2399 MHz <sup>[4]</sup>	C = -67 dBm		-30			dBm
2498 MHz – 12.75 GHz	C = -67 dBm		-20			dBm
Intermodulation	C = -64 dBm $\Delta f = 5,10$ MHz		-39			dBm
<b>Spurious Emission</b>						
30 MHz – 1 GHz				-57		dBm
1 GHz – 12.75 GHz				-47		dBm
<b>Radio Transmitter (T = 25°C, V<sub>CC</sub> = 3.3V, PA5)</b>						
Maximum RF Transmit Power	Pwr setting = PA5	-11	-6			dBm
RF Power Control Range	PA0-PA5		23			dB
RF Power Range Control Step Size	6 steps, monotonic.		4.6			dB
Frequency Deviation			90-175			kHz
Zero Crossing Error			$\pm 125$			ns
Occupied Bandwidth	10-kHz resolution bandwidth, -20 dBc			$\pm 500$		kHz
Initial Frequency Offset			$\pm 100$			kHz
<b>In-band Spurious</b>						
Second Channel Power ( $\pm 2$ MHz)				-20		dBm
$\geq$ Third Channel Power ( $\geq 3$ MHz)				-40		dBm
<b>Non-harmonically Related Spurious</b>						
30 MHz – 12.75 GHz				-57		dBm
<b>Harmonic Spurious</b>						
2 <sup>nd</sup> Harmonic through 5 <sup>th</sup> Harmonic				-30		dBm

Notes:

- 3. BER PRBS9 sequence
- 4. Subharmonics of receive frequency excluded.

## 10.0 AC Characteristics (over the operating range)

**Table 10-1. AC Timing Parameters**

Name	Description	Min.	Typ.	Max.	Unit
$t_{R/F}$	Rise and Fall Times on output pins (see AC test loads section 11.0)		3	20	ns
$t_{BPWR}$	Pulse width for BnPWR for initiating a reset	100			ns
$t_{BRCLK}$	BRCLK period (duty cycle = 40/60)		1		$\mu$ s
$t_{BTXDSU}$	Set-up time, data stable (on BTXD) before positive edge on BRCLK	250			ns
$t_{BTXDHLD}$	Hold time, data stable (on BTXD) after positive edge on BRCLK	0			ns
$t_{BRXDPD}$	Propagation delay of data from RFIN to serial data at BRXD		3		$\mu$ s
$t_{BXTLEN}$	Time from BXTLEN being driven HIGH to crystal oscillator becoming stable			10	ms
$t_{BSEN}$	Time from BSEN asserted to hop frequency synthesizer stable			250	$\mu$ s
$t_{BRXEN}$	Time from BRXEN asserted to receiver circuitry stable for data reception	35			$\mu$ s
$t_{BPAOFF}$	Time from last bit transmitted from the baseband to PA off	4			$\mu$ s
$t_{BTXEN}$	Time from BTXEN to BPAEN	4			$\mu$ s
<b>Serial Interface Timing Parameters</b>					
$t_{BDCLK}$	BDCLK period	154			ns
$\eta$	Duty cycle of BDCLK	40		60	%
$t_{HLD}$	Hold time, data stable after positive edge on BDCLK	20			ns
$t_{SU}$	Set-up time, data stable before positive edge on BDCLK	20			ns
