

# Driver circuit for NMOS linear image sensor C7884 series

High-precision driver circuit for current-output type NMOS linear image sensor

C7884

C7884 series is a driver circuit specifically designed for the Hamamatsu current-output type NMOS linear image sensors (S3901 to S3904 series, S8380/S8381 series). NMOS linear image sensors are self-scanning photodiode arrays integrated with a scanning circuit of N-channel MOS transistors.

C7884 series supplies start pulses and 2-phase clock pulses necessary for image sensor operation. C7884 series also includes a signal processing circuit to read out video signals from an image sensor in the electric charge accumulation mode.

C7884 series operates by input of a master start pulse, master clock pulse and connection to double power supply ( $\pm 12$  V or  $\pm 15$  V).

C7884-20 and C7884-21 are multichannel detector heads incorporating driver circuit (C7884, C7884-01) developed for Hamamatsu NMOS linear image sensor. C7884-20 and C7884-21 are designed especially for compactness, having an overall length as short as 40 mm or less. The housing case also provides a shielding effect against external noise. As useful options, peripheral devices are available for driving C7884-20 and C7884-21, and for the output signal processing.

## Features

- High-precision operation (compared to C7883 series)
- Low noise (compared to C7883 series)
- Compact (compared to conventional type C4070)
- Double power supply ( $\pm 12$  V or  $\pm 15$  V) operation

## ■ Selection guide

Type No.	Product name	Feature
C7884	Driver circuit	High precision driver circuit for current-output type NMOS linear image sensors. Has no input/output connector.
C7884G	C7884 + Pulse generator	A dedicated pulse generator is pre-mounted on C7884 driver circuit board. Has no input/output connector.
C7884-01	Low noise driver circuit	Low noise driver circuit for current-output type NMOS linear image sensors. Has no input/output connector.
C7884G-01	C7884-01 + Pulse generator	A dedicated pulse generator is pre-mounted on C7884-01 driver circuit board. Has no input/output connector.
C7884-20	Multichannel detector head	C7884 driver circuit board is installed in a shield case.
C7884-21	Multichannel detector head	C7884-01 driver circuit board is installed in a shield case.

Note)

- 1: Standard input/output connector is FAP-16-07#2 (made by Yamaichi, sold separately). Equivalent connectors are available from other manufacturers.
- 2: Custom products with an input/output connector pre-mounted are available on request. Please consult our sales office.
- 3: When ordering along with a dedicated cable (A8226), C7884 series will be shipped with a mating connector pre-mounted.
- 4: We welcome custom requests (e.g. different supply voltage or gain). Feel free to contact our sales office.
- 5: When high-speed measurements are required, refer to C7883 series data sheet.
- 6: When using voltage-output type NMOS linear image sensors, refer to C7885 series data sheet.

## Dedicated cable A8226

Connector on board: UFS-16B-01

Input/output signal connector: BNC (Start, CLK, Trigger, EOS, Data Video)

Power supply: lose wire cable

Cable length: 1 m

Note) When making a simple in-circuit evaluation of NMOS linear image sensors without any troublesome soldering, use C7883G, C7884G, C7884G-01 or G7885G in combination with A8226.

All you have to do is just insert an NMOS linear image sensor into the socket and connect the cables to an oscilloscope, power supply and AD converter. Note that NMOS linear image sensors are sold separately.
