F²MC-8FX MB95130MB Series

MB95136MB/F133MBS/F133NBS/F133JBS/F134MBS/F134NBS/F134JBS/
MB95F136MBS/F136NBS/F136JBS/F133MBW/F133NBW/F133JBW/F134MBW/
MB95F134NBW/F134JBW/F136MBW/F136NBW/F136JBW/FV100D-103

■ DESCRIPTION

The MB95130MB series is general-purpose, single-chip microcontrollers. In addition to a compact instruction set, the microcontrollers contain a variety of peripheral functions.

Note : F²MC is the abbreviation of FUJITSU Flexible Microcontroller.

■ FEATURES

- F²MC-8FX CPU core
 - Instruction set optimized for controllers
 - Multiplication and division instructions
 - 16-bit arithmetic operations
 - Bit test branch instruction
 - Bit manipulation instructions etc.
- Clock
 - Main clock
 - Main PLL clock
 - Sub clock (for dual clock product)
 - Sub PLL clock (for dual clock product)

(Continued)

Be sure to refer to the "Check Sheet" for the latest cautions on development.

"Check Sheet" is seen at the following support page

URL : <http://www.fujitsu.com/global/services/microelectronics/product/micom/support/index.html>

"Check Sheet" lists the minimal requirement items to be checked to prevent problems beforehand in system development.

MB95130MB Series

(Continued)

- Timer
 - 8/16-bit compound timer × 1 channel
 - 8/16-bit PPG × 1 channel
 - 16-bit PPG × 1 channel
 - Timebase timer × 1 channel
 - Watch prescaler (for dual clock product) × 1 channel
- LIN-UART × 1 channel
 - LIN function, Clock asynchronous (UART) or clock synchronous (SIO) serial data transfer capable
 - Full duplex double buffer
- UART/SIO × 1 channel
 - Clock asynchronous (UART) or clock synchronous (SIO) serial data transfer capable
 - Full duplex double buffer
- External interrupt × 8 channels
 - Interrupt by edge detection (rising, falling, or both edges can be selected)
 - Can be used to recover from low-power consumption (standby) modes.
- 8/10-bit A/D converter × 8 channels
 - 8-bit or 10-bit resolution can be selected.
- Low-power consumption (standby) mode
 - Stop mode
 - Sleep mode
 - Watch mode (for dual clock product)
 - Timebase timer mode
- I/O port
 - The number of maximum ports
 - Single clock product : 20 ports
 - Dual clock product : 18 ports
 - Configuration
 - General-purpose I/O ports (COMS) : Single clock product : 20 ports
Dual clock product : 18 ports
- Programmable input voltage levels of port
Automotive input level / CMOS input level / hysteresis input level
- Flash memory security function
Protects the content of Flash memory (Flash memory device only)

MB95130MB Series

■ MEMORY LINEUP

	Flash memory	RAM
MB95F133MBS/F133NBS/F133JBS	8 Kbytes	256 bytes

■ DIFFERENCES AMONG PRODUCTS AND NOTES ON SELECTING PRODUCTS

- Notes on using evaluation products

The Evaluation product has not only the functions of the MB95130MB series but also those of other products to support software development for multiple series and models of the F²MC-8FX. The I/O addresses for peripheral resources not used by the MB95130MB series are therefore access-barred. Read/write access to those access-barred addresses may cause peripheral resources supposed to be unused to operate, resulting in unexpected malfunctions of hardware or software.

Particularly, do not use word access to an odd-numbered-byte address in the prohibited areas (If such access is used, the address may be read or written unexpectedly) .

Also, as the read values of prohibited addresses on the evaluation product are different to the values on the flash memory and mask ROM products, do not use these values in the software processing.

The Evaluation product does not support the functions of some bits in single-byte registers. Read/write access to these bits does not cause hardware malfunctions. No particular precautions are required to the flash memory and mask ROM products, as they have the identical read/write operation to the evaluation products.

- Difference of memory spaces

If the amount of memory on the Evaluation product is different from that of the Flash memory or MASK ROM product, carefully check the difference in the amount of memory from the model to be actually used when developing software.

For details of memory space, refer to “■ CPU CORE”.

- Current consumption

- The current consumption of Flash memory product is greater than for MASK ROM product.

- For details of current consumption, refer to “■ ELECTRICAL CHARACTERISTICS”.

- Package

For details of information on each package, refer to “■ PACKAGES AND CORRESPONDING PRODUCTS” and “■ PACKAGE DIMENSION”.

- Operating voltage

The operating voltage is different among the Evaluation, Flash memory, and MASK ROM products.

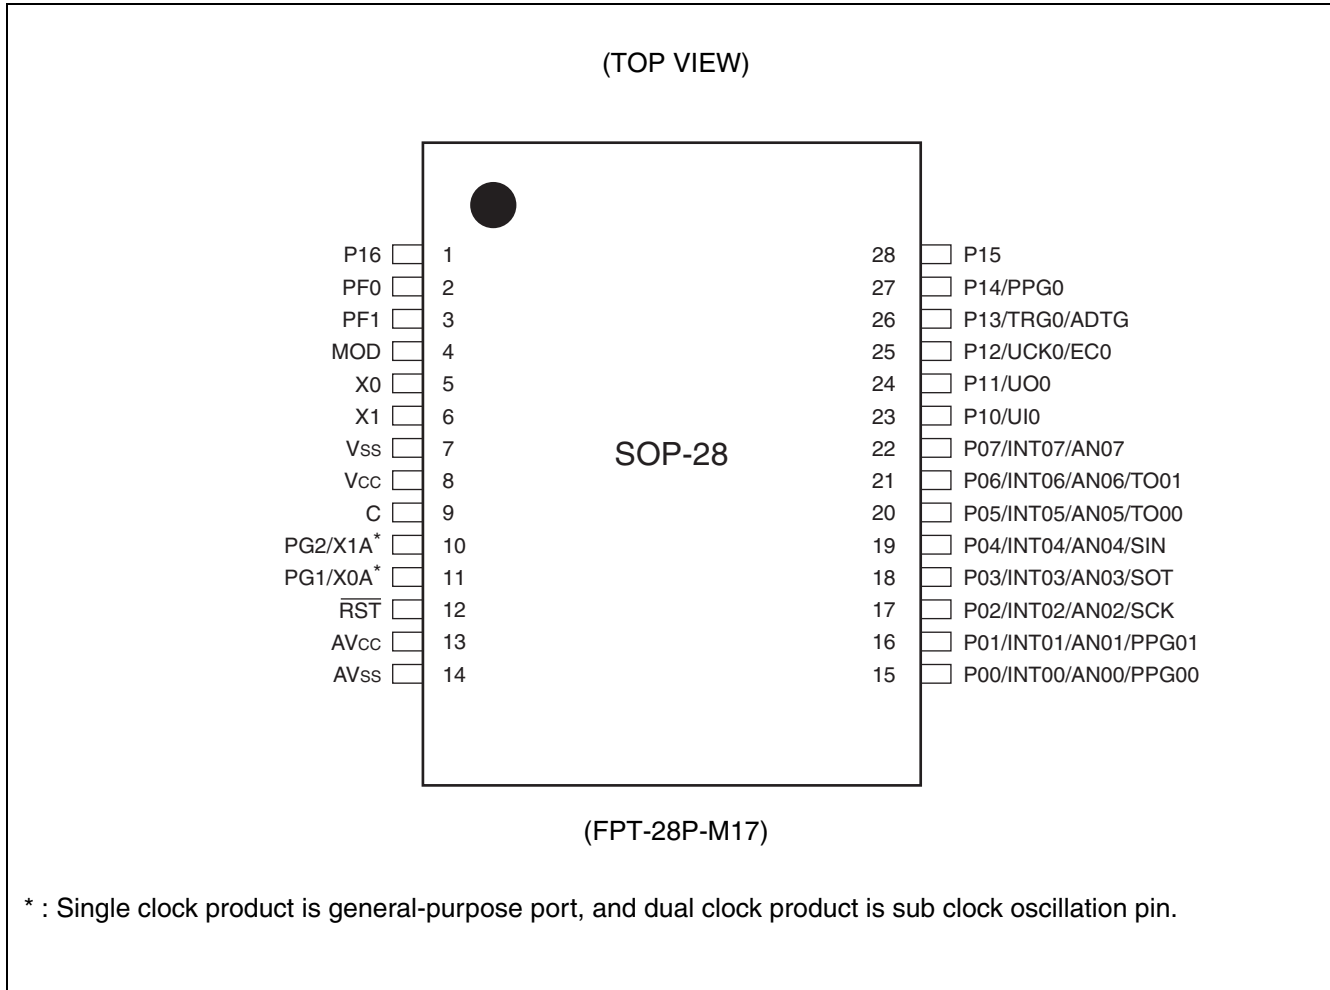

For details of the operating voltage, refer to “■ ELECTRICAL CHARACTERISTICS”.

- Difference MOD Pins

A pull-down resistor is provided for the MOD pin of the MASK ROM product.

MB95130MB Series

■ HANDLING DEVICES

- Preventing latch-up

Care must be taken to ensure that maximum voltage ratings are not exceeded when the devices are used.

Latch-up may occur on CMOS ICs if voltage higher than V_{CC} or lower than V_{SS} is applied to input and output pins other than medium- and high-withstand voltage pins or if voltage higher than the rating voltage is applied between V_{CC} pin and V_{SS} pin.

When latch-up occurs, power supply current increases rapidly and might thermally damage elements.

Also, take care to prevent the analog power supply voltage (AV_{CC}) and analog input voltage from exceeding the digital power supply voltage (V_{CC}) when the analog system power supply is turned on or off.

- Stable supply voltage

Supply voltage should be stabilized.

A sudden change in power supply voltage may cause a malfunction even within the guaranteed operating range of the V_{CC} power supply voltage.

For stabilization, in principle, keep the variation in V_{CC} ripple (p-p value) in a commercial frequency range (50 / 60 Hz) not to exceed 10% of the standard V_{CC} value and suppress the voltage variation so that the transient variation rate does not exceed 0.1 V/ms during a momentary change such as when the power supply is switched.

- Precautions for use of external clock

Even when an external clock is used, oscillation stabilization wait time is required for power-on reset, wake-up from the sub clock mode or stop mode.

PIN CONNECTION

- Treatment of unused pins

Leaving unused input pins unconnected can cause abnormal operation or latch-up, leading to permanent damage. Unused input pins should always be pulled up or down through resistance of at least 2 k Ω .

Any unused input/output pins may be set to the output mode and left open, or set to the input mode and treated the same as unused input pins. If there is any unused output pin, make it open.

- Treatment of power supply pins on A/D converter

Connect to be $AV_{CC} = V_{CC}$ and $AV_{SS} = V_{SS}$ even if the A/D converter is not in use.

Noise riding on the AV_{CC} pin may cause accuracy degradation. So, connect approx. 0.1 μ F ceramic capacitor as a bypass capacitor between AV_{CC} and AV_{SS} pins in the vicinity of this device.

- Power Supply Pins

In products with multiple V_{CC} or V_{SS} pins, the pins of the same potential are internally connected in the device to avoid abnormal operations including latch-up. However, all the pins must be connected to external power supply and a ground line to lower the electro-magnetic emission level, to prevent abnormal operation of strobe signals caused by the rise in the ground level, and to conform to the total output current rating. Moreover, connect the current supply source with the V_{CC} and V_{SS} pins of this device at the low impedance.

It is also advisable to connect a ceramic bypass capacitor of approximately 0.1 μ F between V_{CC} and V_{SS} pins near this device.

- Mode pin (MOD)

Connect the mode pin directly to V_{CC} or V_{SS} pins.

To prevent the device unintentionally entering the test mode due to noise, lay out the printed circuit board so as to minimize the distance from the mode pins to V_{CC} or V_{SS} pins and to provide a low-impedance connection.

Use a ceramic capacitor or a capacitor with equivalent frequency characteristics. A bypass capacitor of V_{CC} pin must have a capacitance value higher than C_s . For connection of smoothing capacitor C_s , refer to the diagram below.

- C Pin Connection Diagram

- Analog power supply

Always set the same potential to AV_{CC} and V_{CC} . When $V_{CC} > AV_{CC}$, the current may flow through the AN00 to AN07 pins.

- NC pins

Any pins marked "NC"(not connected) must be left open.

MB95130MB Series

■ PROGRAMMING FLASH MEMORY MICROCONTROLLERS USING PARALLEL PROGRAMMER

• Supported parallel programmers and adapters

The following table lists supported parallel programmers and adapters.

Package	Applicable adapter model	Parallel programmers
FPT-28P-M17	TEF110-95F136HSPF	AF9708 (Since Rev 02.43E) AF9709/B (Since Rev 02.43E)
FPT-30P-M02	TEF110-95F136MB	

Note : For information about applicable adapter models and parallel programmers, contact the following:
Flash Support Group, Inc. TEL: +81-53-428-8380

• Sector configuration

The following table shows sector-specific addresses for data access by CPU and by the parallel programmer.

• MB95F136MBS/F136NBS/F136MBW/F136NBW/F136JBS/F136JBW (32 Kbytes)

Flash memory	CPU address	Programmer address*
32 Kbytes	8000 _H	18000 _H
	FFFF _H	1FFFF _H

*: Programmer addresses are corresponding to CPU addresses, used when the parallel programmer programs data into Flash memory.
These programmer addresses are used for the parallel programmer to program or erase data in Flash memory.

• Programming method

- 1) Set the type code of the parallel programmer to "17237".
- 2) Load program data to programmer addresses 18000_H to 1FFFF_H.
- 3) Write data with the parallel programmer.

• MB95F134MBS/F134NBS/F134JBS/F134MBW/F134NBW/F134JBW (16 Kbytes)

Flash memory	CPU address	Programmer address*
16 Kbytes	C000 _H	1C000 _H
	FFFF _H	1FFFF _H

*: Programmer addresses are corresponding to CPU addresses, used when the parallel programmer programs data into Flash memory.
These programmer addresses are used for the parallel programmer to program or erase data in Flash memory.

• Programming method

- 1) Set the type code of the parallel programmer to "17237".
- 2) Load program data to programmer addresses 1C000_H to 1FFFF_H.
- 3) Write data with the parallel programmer.

- MB95F133MBS/F133NBS/F133JBS/F133MBW/F133NBW/F133JBW (8 Kbytes)

Flash memory	CPU address	Programmer address*
8 Kbytes	E000 _H	1E000 _H
	FFFF _H	1FFFF _H

*: Programmer addresses are corresponding to CPU addresses, used when the parallel programmer programs data into Flash memory.

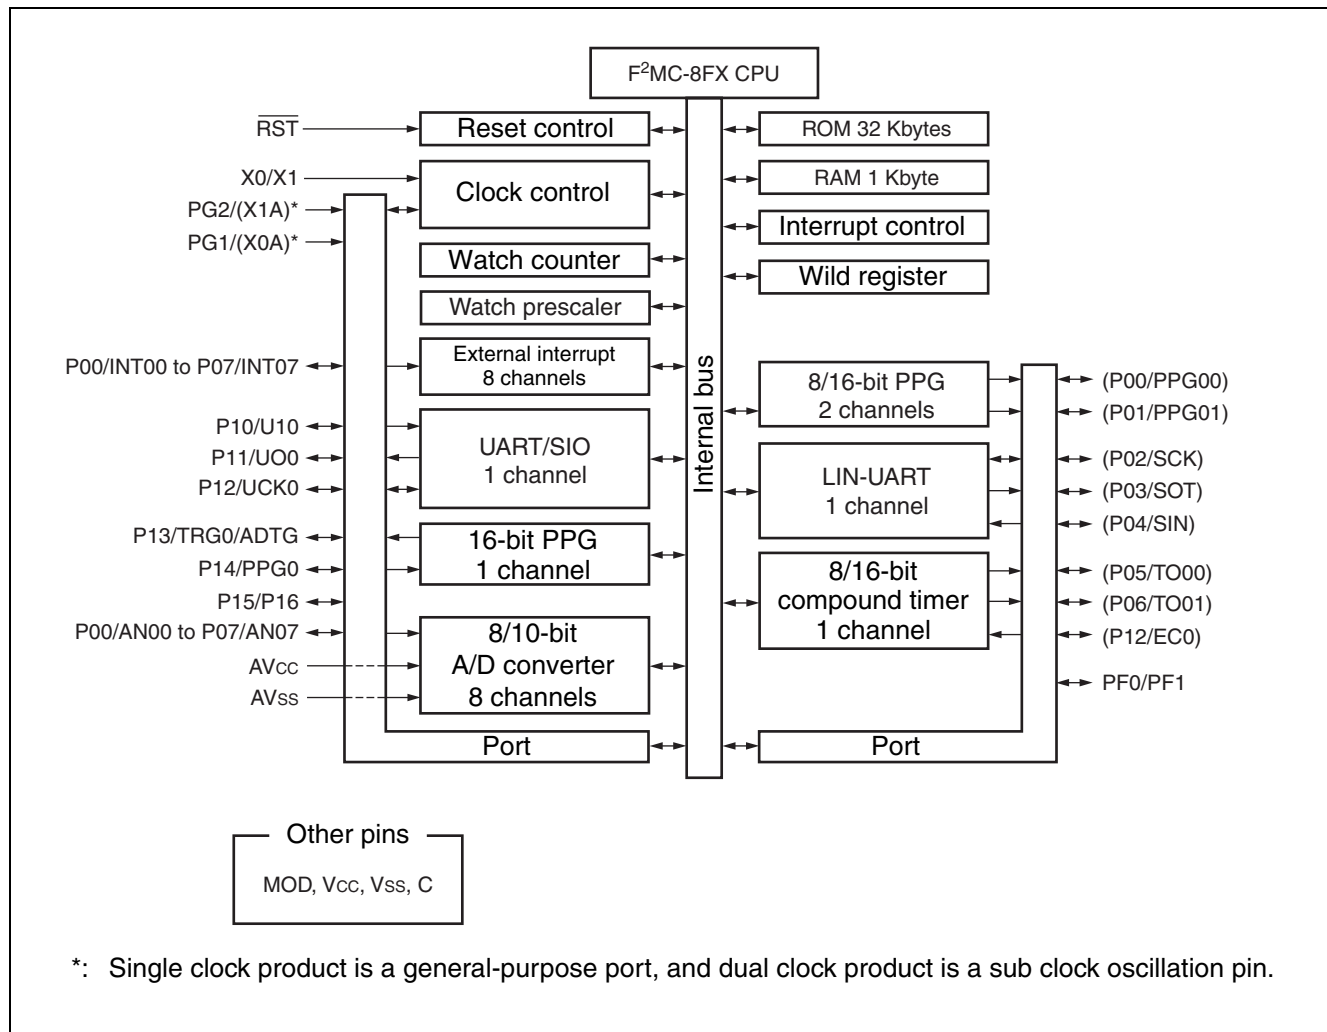

These programmer addresses are used for the parallel programmer to program or erase data in Flash memory.

- **Programming method**

- 1) Set the type code of the parallel programmer to "17237".
- 2) Load program data to programmer addresses 1E000_H to 1FFFF_H.
- 3) Write data with the parallel programmer.

MB95130MB Series

■ BLOCK DIAGRAM

■ CPU CORE

1. Memory Space

Memory space of the MB95130MB series is 64 Kbytes and consists of I/O area, data area, and program area. The memory space includes special-purpose areas such as the general-purpose registers and vector table. Memory map of the MB95130MB series is shown below.

• Memory Map

	Flash memory	RAM	Address #1	Address #2
MB95F133MBS/F133NBS/F133JBS	8 Kbytes	256 bytes	0180 _H	E000 _H
MB95F133MBW/F133NBW/F133JBW				
MB95F134MBS/F134NBS/F134JBS	16 Kbytes	512 bytes	0280 _H	C000 _H
MB95F134MBW/F134NBW/F134JBW				
MB95F136MBS/F136NBS/F136JBS	32 Kbytes	1 Kbyte	0480 _H	8000 _H
MB95F136MBW/F136NBW/F136JBW				

MB95130MB Series

2. Register

The MB95130MB series has two types of registers; dedicated registers in the CPU and general-purpose registers in the memory. The dedicated registers are as include:

- Program counter (PC) : A 16-bit register to indicate locations where instructions are stored.
- Accumulator (A) : A 16-bit register for temporary storage of arithmetic operations. In the case of an 8-bit data processing instruction, the lower 1-byte is used.
- Temporary accumulator (T) : A 16-bit register which performs arithmetic operations with the accumulator. In the case of an 8-bit data processing instruction, the lower 1-byte is used.
- Index register (IX) : A 16-bit register for index modification
- Extra pointer (EP) : A 16-bit pointer to point to a memory address.
- Stack pointer (SP) : A 16-bit register to indicate a stack area.
- Program status (PS) : A 16-bit register for storing a register bank pointer, a direct bank pointer, and a condition code register

The PS can further be divided into higher 8 bits for use as a register bank pointer (RP) and a direct bank pointer (DP) and the lower 8 bits for use as a condition code register (CCR). (Refer to the diagram below.)

- Structure of the program status

The RP indicates the address of the register bank currently being used. The relationship between the content of RP and the real address conforms to the conversion rule illustrated below:

The DP specifies the area for mapping instructions (16 different types of instructions such as MOV A and dir) using direct addresses to 0080H to 00FFH.

Direct bank pointer (DP2 to DP0)	Specified address area	Mapping area
XXX _B (no effect to mapping)	0000 _H to 007F _H	0000 _H to 007F _H (without mapping)
000 _B (initial value)	0080 _H to 00FF _H	0080 _H to 00FF _H (without mapping)
001 _B		0100 _H to 017F _H
010 _B		0180 _H to 01FF _H
011 _B		0200 _H to 027F _H
100 _B		0280 _H to 02FF _H
101 _B		0300 _H to 037F _H
110 _B		0380 _H to 03FF _H
111 _B		0400 _H to 047F _H

The CCR consists of the bits indicating arithmetic operation results or transfer data content and the bits that control CPU operations at interrupt.

- H flag : Set to "1" when a carry or a borrow from bit 3 to bit 4 occurs as a result of an arithmetic operation. Cleared to "0" otherwise. This flag is for decimal adjustment instructions.
- I flag : Interrupt is enabled when this flag is set to "1". Interrupt is disabled when this flag is set to "0". The flag is cleared to "0" when reset.
- IL1, IL0 : Indicates the level of the interrupt currently enabled. Processes an interrupt only if its request level is higher than the value indicated by these bits.

IL1	IL0	Interrupt level	Priority
0	0	0	High ↑ ↓ Low (no interruption)
0	1	1	
1	0	2	
1	1	3	

- N flag : Set to "1" if the MSB is set to "1" as the result of an arithmetic operation. Cleared to "0" when the bit is set to "0".
- Z flag : Set to "1" when an arithmetic operation results in "0". Cleared to "0" otherwise.
- V flag : Set to "1" if the complement on 2 overflows as a result of an arithmetic operation. Cleared to "0" otherwise.
- C flag : Set to "1" when a carry or a borrow from bit 7 occurs as a result of an arithmetic operation. Cleared to "0" otherwise. Set to the shift-out value in the case of a shift instruction.

MB95130MB Series

The following general-purpose registers are provided:

General-purpose registers: 8-bit data storage registers

The general-purpose registers are 8 bits and located in the register banks on the memory. 1-bank contains 8 registers. Up to a total of 32 banks can be used on the MB95130MB series. The bank currently in use is specified by the register bank pointer (RP), and the lower 3 bits of OP code indicates the general-purpose register 0 (R0) to general-purpose register 7 (R7).

■ ELECTRICAL CHARACTERISTICS

1. Absolute Maximum Ratings

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage*1	V_{CC} AV_{CC}	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*2
Input voltage*1	V_I	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*3
Output voltage*1	V_O	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*3
Maximum clamp current	I_{CLAMP}	- 2.0	+ 2.0	mA	Applicable to pins*4
Total maximum clamp current	ΣI_{CLAMP}	—	20	mA	Applicable to pins*4
“L” level maximum output current	I_{OL1}	—	15	mA	Other than PF0, PF1
	I_{OL2}		15		PF0, PF1
“L” level average current	I_{OLAV1}	—	4	mA	Other than PF0, PF1 Average output current = operating current × operating ratio (1 pin)
	I_{OLAV2}		12		PF0, PF1 Average output current = operating current × operating ratio (1 pin)
“L” level total maximum output current	ΣI_{OL}	—	100	mA	
“L” level total average output current	ΣI_{OLAV}	—	50	mA	Total average output current = operating current × operating ratio (Total of pins)
“H” level maximum output current	I_{OH1}	—	- 15	mA	Other than PF0, PF1
	I_{OH2}		- 15		PF0, PF1
“H” level average current	I_{OHAV1}	—	- 4	mA	Other than PF0, PF1 Average output current = operating current × operating ratio (1 pin)
	I_{OHAV2}		- 8		PF0, PF1 Average output current = operating current × operating ratio (1 pin)
“H” level total maximum output current	ΣI_{OH}	—	- 100	mA	
“H” level total average output current	ΣI_{OHAV}	—	- 50	mA	Total average output current = operating current × operating ratio (Total number of pins)
Power consumption	P_d	—	320	mW	
Operating temperature	T_A	- 40	+ 85	°C	
Storage temperature	T_{stg}	- 55	+ 150	°C	

MB95130MB Series

- *1: The parameter is based on $AV_{SS} = V_{SS} = 0.0\text{ V}$.
- *2: Apply equal potential to AV_{CC} and V_{CC} .
- *3: V_I and V_O should not exceed $V_{CC} + 0.3\text{ V}$. V_I must not exceed the rating voltage. However, if the maximum current to/from an input is limited by some means with external components, the I_{CLAMP} rating supersedes the V_I rating.
- *4: Applicable pins: P10 to P15, PF0, PF1 (Inapplicable pins: PG1, PG2)
 - Use within recommended operating conditions.
 - Use at DC voltage (current).
 - +B signal is an input signal that exceeds V_{CC} voltage. The + B signal should always be applied a limiting resistance placed between the + B signal and the microcontroller.
 - The value of the limiting resistance should be set so that when the + B signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.
 - Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the V_{CC} pin, and this affects other devices.
 - Note that if the + B signal is inputted when the microcontroller power supply is off (not fixed at 0 V), the power supply is provided from the pins, so that incomplete operation may result.
 - Note that if the + B input is applied during power-on, the power supply is provided from the pins and the resulting power supply voltage may not be sufficient to operate the power-on reset.
 - Care must be taken not to leave the + B input pin open.
 - Note that analog system input/output pins other than the A/D input pins (LCD drive pins, etc.) cannot accept +B signal input.
 - Sample recommended circuits :

- Input/Output Equivalent circuits

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

2. Recommended Operating Conditions

($AV_{SS} = V_{SS} = 0.0\text{ V}$)

Parameter	Symbol	Value		Unit	Remarks
		Min	Max		
Power supply voltage	V_{CC}, AV_{CC}	2.42* ²	5.5* ¹	V	At normal operation
		2.3	5.5		Holds condition in stop mode
Smoothing capacitor	C_S	0.1	1.0	μF	*3
Operating temperature	T_A	- 40	+ 85	$^{\circ}\text{C}$	

*1: The value varies depending on the operating frequency.

*2: The value is 2.88 V when the low-voltage detection reset is used.

*3: Use ceramic capacitor or a capacitor with equivalent frequency characteristics. A bypass capacitor of V_{CC} pin must have a capacitance value higher than C_S . For connection of smoothing capacitor C_S , refer to the diagram below.

• C pin connection diagram

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

MB95130MB Series

3. DC Characteristics

($V_{CC} = AV_{CC} = 5.0\text{ V} \pm 10\%$, $AV_{SS} = V_{SS} = 0.0\text{ V}$, $T_A = -40\text{ }^\circ\text{C}$ to $+85\text{ }^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min	Typ	Max		
“H” level input voltage	V_{IHI}	P04 (selectable in SIN), P10 (selectable in UI0)	—	$0.7 V_{CC}$	—	$V_{CC} + 0.3$	V	Hysteresis input
	V_{IHSI}	P00 to P07, P10 to P16, PF0, PF1, PG1, PG2	—	$0.8 V_{CC}$	—	$V_{CC} + 0.3$	V	Hysteresis input

Machine clock frequency	F_{MP}	—	0.031	—	16.250	MHz	When using main clock
	F_{MPL}	—	1.024	—	131.072	kHz	When using sub clock

*1 : Clock before setting division due to machine clock division ratio selection bit (SYCC : DIV1 and DIV0) . This source clock is divided by the machine clock division ratio selection bit (SYCC : DIV1 and DIV0) , and it becomes the machine clock. Further, the source clock can be selected as follows.

- Main clock divided by 2
- PLL multiplication of main clock (select from 1, 2, 2.5, 4 multiplication)
- Sub clock divided by 2
- PLL multiplication of sub clock (select from 2, 3, 4 multiplication)

*2 : Operation clock of the microcontroller. Machine clock can be selected as follows.

- Source clock (no division)
- Source clock divided by 4
- Source clock divided by 8
- Source clock divided by 16

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Resolution	—	—	—	10	bit	
Total error		- 3.0	—	+ 3.0	LSB	
Linearity error		- 2.5	—	+ 2.5	LSB	
Differential linear error		- 1.9	—	+ 1.9	LSB	
Zero transition voltage	V_{OT}	$AV_{SS} - 1.5\text{ LSB}$	$AV_{SS} + 0.5\text{ LSB}$	$AV_{SS} + 2.5\text{ LSB}$	V	
Full-scale transition voltage	V_{FST}	$AV_{CC} - 4.5\text{ LSB}$	$AV_{CC} - 1.5\text{ LSB}$	$AV_{CC} + 0.5\text{ LSB}$	V	
Compare time	—	0.9	—	16500	μs	$4.5\text{ V} \leq AV_{CC} \leq 5.5\text{ V}$
		1.8	—	16500	μs	$4.0\text{ V} \leq AV_{CC} < 4.5\text{ V}$
Sampling time	—	0.6	—	∞	μs	$4.5\text{ V} \leq AV_{CC} \leq 5.5\text{ V}$, At external impedance < at 5.4 k Ω
		1.2	—	∞	μs	$4.0\text{ V} \leq AV_{CC} \leq 4.5\text{ V}$, At external impedance < at 2.4 k Ω
Analog input current	I_{AIN}	- 0.3	—	+ 0.3	μA	
Analog input voltage	V_{AIN}	AV_{SS}	—	AV_{CC}	V	

(2) Notes on Using A/D Converter

• External impedance of analog input and its sampling time

- A/D converter with sample and hold circuit. If the external impedance is too high to keep sufficient sampling time, the analog voltage charged to the internal sample and hold capacitor is insufficient, adversely affecting A/D conversion precision. Therefore to satisfy the A/D conversion precision standard, consider the relationship between the external impedance and minimum sampling time and either adjust the register value and operating frequency or decrease the external impedance so that the sampling time is longer than the minimum value. Also, if the sampling time cannot be sufficient, connect a capacitor of about 0.1 μF to the analog input pin.

• Analog input equivalent circuit

	R	C
$4.5 \text{ V} \leq AV_{CC} \leq 5.5 \text{ V}$	2.0 k Ω (Max)	16 pF (Max)
$4.0 \text{ V} \leq AV_{CC} < 4.5 \text{ V}$	8.2 k Ω (Max)	16 pF (Max)

Note : The values are reference values.

• The relationship between external impedance and minimum sampling time

(External impedance = at 0 k Ω to 100 k Ω)

(External impedance = at 0 k Ω to 20 k Ω)

• Errors

As $AV_{CC} - AV_{SSL}$ becomes smaller, values of relative errors grow larger.

MB95130MB Series

(3) Definition of A/D Converter Terms

- Resolution
The level of analog variation that can be distinguished by the A/D converter.
When the number of bits is 10, analog voltage can be divided into $2^{10} = 1024$.
- Linearity error (unit : LSB)
The deviation between the value along a straight line connecting the zero transition point (“00 0000 0000” ← → “00 0000 0001”) of a device and the full-scale transition point (“11 1111 1111” ← → “11 1111 1110”) compared with the actual conversion values obtained.
- Differential linear error (Unit : LSB)
Deviation of input voltage, which is required for changing output code by 1 LSB, from an ideal value.
- Total error (unit: LSB)
Difference between actual and theoretical values, caused by a zero transition error, full-scale transition error, linearity error, quantum error, and noise.

(Continued)

(Continued)

$$\text{Linear error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times N + V_{OT}\}}{1 \text{ LSB}}$$

$$\text{Differential linear error of digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1$$

N : A/D converter digital output value

V_{NT} : Voltage at which digital output transits from $(N - 1)_H$ to N_H .

V_{OT} (Ideal value) = $AV_{SS} + 0.5 \text{ LSB [V]}$

V_{FST} (Ideal value) = $AV_{CC} - 1.5 \text{ LSB [V]}$

MB95130MB Series

6. Flash Memory Program/Erase Characteristics

Parameter	Value			Unit	Remarks
	Min	Typ	Max		
Chip erase time	—	1.0* ¹	15.0* ²	s	Excludes 00 _H programming prior erasure.
Byte programming time	—	32	3600	μs	Excludes system-level overhead.
Erase/program cycle	10000	—	—	cycle	
Power supply voltage at erase/program	4.5	—	5.5	V	
Flash memory data retention time	20* ³	—	—	year	Average T _A = +85 °C

*1 : T_A = + 25 °C, V_{CC} = 5.0 V, 10000 cycles

*2 : T_A = + 85 °C, V_{CC} = 4.5 V, 10000 cycles

*3 : This value comes from the technology qualification (using Arrhenius equation to translate high temperature measurements into normalized value at +85 °C) .

FUJITSU LIMITED

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of Fujitsu semiconductor device; Fujitsu does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information. Fujitsu assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of Fujitsu or any third party or does Fujitsu warrant non-infringement of any third-party's intellectual property right or other right by using such information. Fujitsu assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that Fujitsu will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
