# Precautions

Use the Switch within the specified electrical ratings. Using the Switch outside of the rated values will not only shorten its service life but may cause heat generation or fire damage. When turning the power ON or OFF, use the rated voltage and current.

## ■ Enclosure Ratings

### Do Not Use the Switch Underwater

The Switch was tested and found to meet the conditions necessary to meet the following standard. The test checks for water intrusion after immersion for a specified time period. The test does not check for switching operation underwater.

IEC Publication 529, degree of protection IP67.

### Protection Against Chemicals

Prevent the Switch from coming into contact with oil or chemicals, to avoid damaging (or deterioration of) Switch materials.

## ■ Mounting

### Preparation for Mounting

Turn the power OFF before (1) mounting or removing the Switch, or (2) before performing maintenance or inspection. Failure to do so can cause electrical shock or fire.

Mount the Switch on a flat surface. If it is mounted on an uneven surface the Switch may bend, causing a malfunction or cracking the housing.

### Mounting the Switch

Mount the switch securely, using an M4 screw with a flat washer or spring washer. Tighten the screw to a torque of 1.18 to 1.47 N•m.

When mounting the switch, do not apply any external pressure to the actuator in a direction other than the direction of operation.

The following diagram shows the mounting hole dimensions.

### Mounting Holes

## ■ Operation

Make sure that the switching object is perfectly separated from the actuator when the switch is not operated and the actuator is pressed appropriately by the switching object when the switch is operated. The switching object must not move beyond its operational limit position.

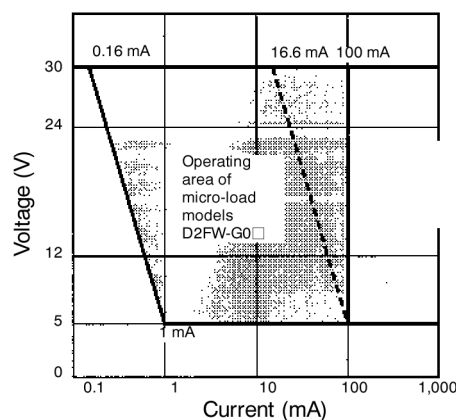

Position the switching object so that its moving direction is the same as that of the actuator.

## ■ Using the Switch with Micro Loads

Even when the Switch is used within the appropriate operating range, power surges may shorten its service life. Insert a contact protection circuit as required.

Micro application loads are indicated by N standard reference values. This value represents the failure rate at a 60% ( $\lambda_{60}$ ) reliability level. (JIS C5003)

The equation  $\lambda_{60} = 0.5 \times 10^{-6}/\text{operations}$  indicates that a failure rate of 1/2,000,000 operations can be expected at a reliability level of 60%.
