Description

The Intersil ACS00MS is a Radiation Hardened quad 2-Input NAND gate. A high logic level on both inputs forces the output to a logic low state.

The ACS00MS utilizes advanced CMOS/SOS technology to achieve high-speed operation. This device is a member of radiation hardened, high-speed, CMOS/SOS Logic Family.

- This dimension allows for off-center lid, meniscus, and glass overrun.
- Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
- N is the maximum number of terminal positions.
- Measure dimension S1 at all four corners.
- For bottom-brazed lead packages, no organic or polymeric materials shall be molded to the bottom of the package to cover the leads.
- Dimension Q shall be measured at the point of exit (beyond the meniscus) of the lead from the body. Dimension Q minimum shall be reduced by 0.0015 inch (0.038mm) maximum when solder dip lead finish is applied.
- Dimensioning and tolerancing per ANSI Y14.5M - 1982.
