Product Specification

1. General Description

LM270WF1 is a Color Active Matrix Liquid Crystal Display with an integral Cold Cathode Fluorescent Lamp(CCFL) backlight system without inverter. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. It has a 27 inch diagonally measured active display area with Full HD resolution (1080 vertical by 1920 horizontal pixel array) Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus, presenting a palette of more than 16,7M colors with Advanced-FRC (Frame Rate Control). It has been designed to apply the interface method that enables low power, high speed, low EMI. FPD Link or compatible must be used as a LVDS (Low Voltage Differential Signaling) chip. It is intended to support applications where thin thickness, wide viewing angle, low power are critical factors and graphic displays are important. It is intended to support displays where high brightness, super wide viewing angle, high color saturation, and high color are important.

| Active Screen Size | 27 inches(68.6cm) diagonal | |

Product Specification

2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Table 1. ABSOLUTE MAXIMUM RATINGS

| Parameter | Symbol | Valu | Values | | Notes | |
|----------------------------|--------|------|--------|-------|-------------|--|
| raianetei | Symbol | Min | Max | Units | Notes | |
| Power Input Voltage | VLCD | -0.3 | 12.4 | Vdc | at 25 ± 2°C | |
| Operating Temperature | Тор | 0 | 50 | °C | | |
| Storage Temperature | Тѕт | -20 | 60 | °C | 1 | |
| Operating Ambient Humidity | Нор | 10 | 90 | %RH | 1 | |
| Storage Humidity | Нѕт | 10 | 90 | %RH | | |

Note: 1. Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be 39 °C Max, and no condensation of water.

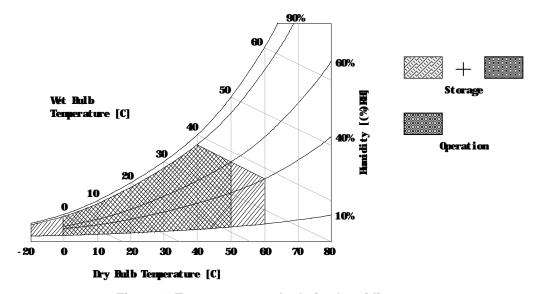

Figure 2. Temperature and relative humidity

LM270WF1 Liquid Crystal Display

Product Specification

3. Electrical Specifications

3-1. Electrical Characteristics

It requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input power for the CCFL, is typically generated by an inverter. The inverter is an external unit to the LCDs.

Table 2-1. ELECTRICAL CHARACTERISTICS

| Parameter | Symbol | Values | | | Unit | Notes |
|-------------------------------|--------|--------|------|------|-------------------|-------|
| Parameter | Symbol | Min | Тур | Max | Offic | Notes |
| MODULE : | | | | | | |
| Power Supply Input Voltage | VLCD | 11.6 | 12.0 | 12.4 | Vdc | |
| Permissive Power Input Ripple | VdRF | | | 400 | mV _{p-p} | 1 |
| Differential Impedance | Zm | 90 | 100 | 110 | Ohm | |
| Douge Comply Input Compant | ILCD | - | 445 | 468 | mA | 2 |
| Power Supply Input Current | | - | 559 | 592 | mA | 3 |
| Dower Consumption | Рс түр | - | 5.35 | 5.62 | Watt | 2 |
| Power Consumption | Рс мах | - | 6.71 | 7.10 | Watt | 3 |
| | | | | | | |
| Rush current | Irush | - | - | 3.0 | Α | 4 |

Note:

- 1. Permissive power ripple should be measured under VCC=12.0V, 25°C, fV(frame frequency)=MAX condition and At that time, we recommend the bandwidth configuration of oscilloscope is to be under 20Mhz. See the next page.
- 2. The specified current and power consumption are under the V_{LCD} =12.0V, 25 ± 2°C, f_V =60Hz condition whereas Mosaic and max power pattern shown in the [Figure 3] is displayed.
- 3. The current is specified at the maximum current pattern.
- 4. Maximum Condition of Inrush current:

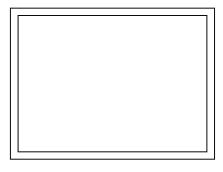

The duration of rush current is about 2ms and rising time of Input Voltage is 1ms(min.).

At any rising time of Input voltage, Keep the I2T Value by below Condition

Condition: I2T < 32*2ms

Product Specification

• Permissive Power input ripple (VCC=5.0V, 25°C, fV(frame frequency)=MAX condition)

| Discharge Stabilization Time | | Ts | | | 3.0 | Min | 1, 5 |
| Power Consumption | | PBL | 47.3 | 83.6 | 93.1 | Watt | 6 |
| Life Time | | | 40,000 | | | Hrs | 1, 7 |

Note: The design of the inverter must have specifications for the lamp in LCD Assembly.

The performance of the Lamp in LCM, for example life time or brightness, is extremely influenced by the characteristics of the DC-AC inverter. So all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter. When you design or order the inverter, please make sure unwanted lighting caused by the mismatch of the lamp and the inverter (no lighting, flicker, etc) never occurs. When you confirm it, the LCD–Assembly should be operated in the same condition as installed in you instrument.

- Do not attach a conducting tape to lamp connecting wire.
 If the lamp wire attach to a conducting tape, TFT-LCD Module has a low luminance and the inverter has abnormal action. Because leakage current is occurred between lamp wire and conducting tape.
- 1. Specified values are for a single lamp.
- 2. Operating voltage is measured at 25 ± 2 °C. The variance of the voltage is ± 10 %.
- 3. The voltage above V_S should be applied to the lamps for more than 1 second for start-up. (Inverter open voltage must be more than lamp starting voltage.)
 Otherwise, the lamps may not be turned on. The used lamp current is the lamp typical current.
- 4. Lamp frequency may produce interface with horizontal synchronous frequency and as a result this may cause beat on the display. Therefore lamp frequency shall be as away possible from the horizontal
- synchronous frequency and from its harmonics in order to prevent interference.

 5. Let's define the brightness of the lamp after being lighted for 5 minutes as 100%.

 T_S is the time required for the brightness of the center of the lamp to be not less than 95%.
- 6. The lamp power consumption shown above does not include loss of external inverter. The used lamp current is the lamp typical current. ($P_{BL} = V_{BL} \times I_{BL} \times N_{Lamp}$)
- 7. The life is determined as the time at which brightness of the lamp is 50% compared to that of initial value at the typical lamp current on condition of continuous operating at $25 \pm 2^{\circ}$ C.

Ver 0.0 July. 2. 2008 8 / 31

Product Specification

- 8. The output of the inverter must have symmetrical (negative and positive) voltage waveform and symmetrical current waveform (Unsymmetrical ratio is less than 10%). Please do not use the inverter which has unsymmetrical voltage and unsymmetrical current and spike wave.
 - Requirements for a system inverter design, which is intended to have a better display performance, a better power efficiency and a more reliable lamp, are following.
 - It shall help increase the lamp lifetime and reduce leakage current.
 - a. The asymmetry rate of the inverter waveform should be less than 10%.
 - b. The distortion rate of the waveform should be within $\sqrt{2 \pm 10\%}$.
 - * Inverter output waveform had better be more similar to ideal sine wave.

* Asymmetry rate:

$$|I_{p} - I_{-p}| / I_{rms} \times 100\%$$

* Distortion rate

$$I_p (or I_{-p}) / I_{rms}$$

- 9. The inverter which is combined with this LCM, is highly recommended to connect coupling(ballast) condenser at the high voltage output side. When you use the inverter which has not coupling(ballast) condenser, it may cause abnormal lamp lighting because of biased mercury as time goes.
- 10.In case of edgy type back light with over 4 parallel lamps, input current and voltage wave form should be synchronized

Product Specification

3-2. Interface Connections

This LCD employs Two interface connections, a 30 pin connector is used for the module electronics and a 14Pin Connector is used for the integral backlight system.

3-2-1. LCD Module

- LCD Connector(CN1): KDF71G-30S-1H, (Manufactured by Hirose)

- Mating Connector: FI-X30C2L (Manufactured by JAE) or Equivalent

Product Specification

3-3. Signal Timing Specifications

This is signal timing required at the input of the TMDS transmitter. All of the interface signal timing should be satisfied with the following specifications for it's proper operation.

Table 5. TIMING TABLE

| ITEM | Symbol | | Min | Тур | Max | Unit | Note |
|-------|------------------------|------|-------|-------|-------|------|------|
| DOLK | Period | tCLK | 11.76 | 13.89 | 15.38 | ns | |
| DCLK | Frequency | - | 65 | 72 | 82.5 | MHz | |
| | Period | tHP | 1008 | 1088 | 1120 | tCLK | |
| | Horizontal Valid | tHV | 960 | 960 | 960 | tCLK | |
| | Horizontal Blank | tHB | 48 | 128 | 160 | | |
| Hsync | Frequency | fH | 64 | 66 | 83 | KHz | |
| | Width | tWH | 8 | 32 | 48 | tCLK | |
| | Horizontal Back Porch | tHBP | 24 | 48 | 64 | | |
| | Horizontal Front Porch | tHFP | 16 | 48 | 48 | | |
| | Period | tVP | 1090 | 1100 | 1160 | tHP | |
| | Vertical Valid | tVV | 1080 | 1080 | 1080 | tHP | |
| | Vertical Blank | tVB | 10 | 20 | 80 | tHP | |
| Vsync | Frequency | fV | 50 | 60 | 75 | Hz | |
| | Width | tWV | 2 | 4 | 16 | tHP | |
| | Vertical Back Porch | tVBP | 5 | 8 | 32 | | |
| | Vertical Front Porch | tVFP | 3 | 8 | 32 | | |

Note: Hsync period and Hsync width-active should be even number times of tclk. If the value is odd number times of tclk, display control signal can be asynchronous. In order to operate this LCM a Hsync, Vsyn, and DE(data enable) signals should be used.

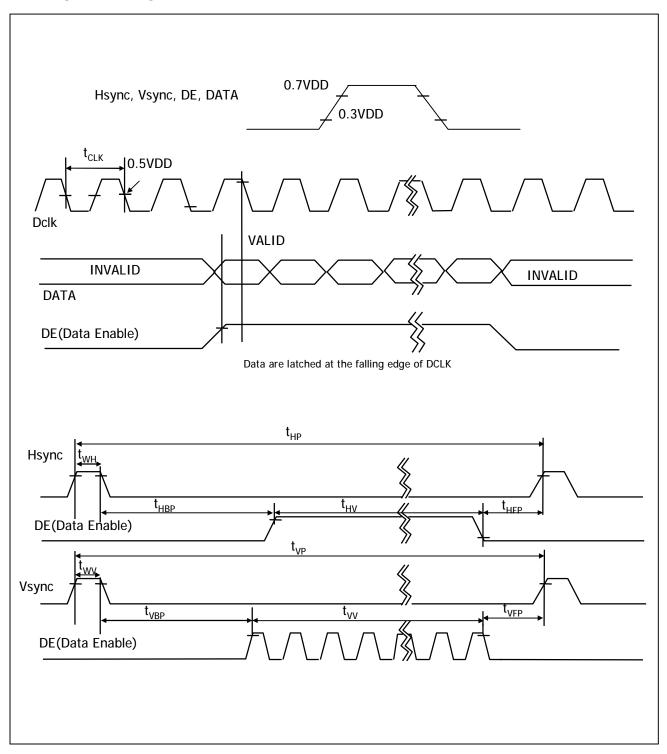

- 1. The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rates.
- 2. Vsync and Hsync should be keep the above specification.
- 3. Hsync Period, Hsync Width, and Horizontal Back Porch should be any times of character number(8).
- 4. The polarity of Hsync, Vsync is not restricted.

Notes: 1. Please avoid floating state of interface signal at invalid period.

- 2. When the interface signal is invalid, be sure to pull down the power supply for LCD V_{LCD} to 0V.
- 3. Lamp power must be turn on after power supply for LCD and interface signal are valid.

Product Specification

4. Optical Specifications

Optical characteristics are determined after the unit has been 'ON' for approximately 30 minutes in a dark environment at $25\pm2^{\circ}$ C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and θ equal to 0 ° and aperture 1 degree.

FIG. 1 presents additional information concerning the measurement equipment and method.

Product Specification

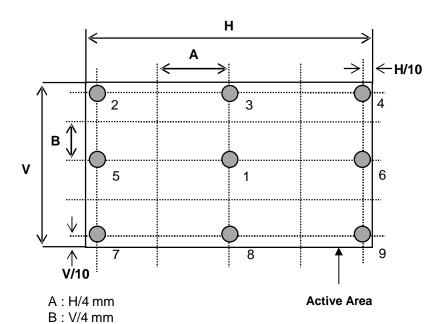

Notes 1. Contrast Ratio(CR) is defined mathematically as:

Contrast Ratio = Surface Luminance with all white pixels
Surface Luminance with all black pixels

- 2. **Surface luminance** is luminance value at No.1 point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 6.
- 3. The variation in surface luminance, d WHITE is defined as:

$$d_{WHITE} = \frac{\text{Minimum}(L_{on1}, L_{on2}, L_{on9})}{\text{Maximum}(L_{on1}, L_{on2}, L_{on9})} \times 100(\%)$$

Measuring point for surface luminance & measuring point for luminance variation

[FIGURE 7] Measure Point for Luminance

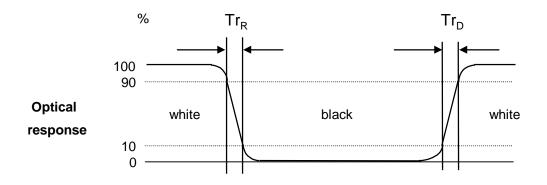

@ H,V: Active Area

Product Specification

4. **The response time** is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

Response time is the time required for the display to transition from white to black (Rise Time, TrR) and from black to white (Decay Time, TrD).

[FIGURE 8] Response Time

- 5, The gray to gray response time is defined as the following figure and shall be measured by switching the input signal for "Gray To Gray".
 - Gray step: 5 step
 - TGTG_AVR is the total average time at rising time and falling time for "Gray To Gray".
 - TGTG_MAX is the max time at rising time or falling time for "Gray To Gray".

Table 10. Gray to gray response time table

| Cray to Cray | , | Rising Time | | | | | | | |

9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.
 Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage : $V=\pm 200 \text{mV}$ (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)

 And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can't be operated its full characteristics perfectly.
- (8) A screw which is fastened up the steels should be a machine screw. (if not, it causes metallic foreign material and deal LCM a fatal blow)
- (9) Please do not set LCD on its edge.

LM270WF1 Liquid Crystal Display

Product Specification

9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
