Product Description

The LPT16ED is a silicon germanium low phase noise, high frequency NPN transistor for oscillator applications up to 16GHz.

The transistor exhibits low 1/f noise and provides +13 dBm typical output power at V_{CE} of 3V and I_C equal to 20 mA. It is easily operated from a single supply voltage with appropriate external passive components.

The silicon germanium technology used in this device provides outstanding high-frequency performance combined with high thermal conductivity and superior reliability under harsh operating and storage conditions.

A complete mechanical description of the transistor is available under SiGe Semiconductor Document 07MS001.
